Preface	i
1 Introduction	1
1.1 Motivation und Kurzfassung	1
1.2 Motivation and Abstract	3
1.3 Green's functions in solid state physics	5
1.3.1 The many-body propagator	5
1.3.2 Fermi liquid theory	6
1.4 Quasiclassical theory	7
1.4.1 BCS Theory in the Gorkov Technique	7
1.4.2 The quasiclassical approximation, i.e. the Eilenberger Equation	7
1.4.3 The dirty limit, i.e. the Usadel Equation	9
1.5 Keldysh technique	10
1.6 Superconducting Heterostructures	13
1.6.1 The proximity Effect	13
1.6.2 Superconductivity vs. Ferromagnetism	14
1.6.3 Spin-dependent scattering Theory	15
1.6.4 Boundary conditions	17
1.6.5 Quantum circuit theory	20

2	Fully spin-dependent BC for isotropic quasiclassical Green's functions	23
2.1	Abstract	23
2.2	Introduction	23
2.3	Spin separation of the transfer matrix	25
2.4	Generalized spin-dependent boundary condition	27
2.5	Strongly spin-dependent tunnel contacts	30
2.6	Conclusion	31
3	Evidence for strong spin mixing at FI-S interfaces	33
3.1	Abstract	33
3.2	Introduction: Ferromagnetic Insulator - Superconductor heterostructures	33
3.3	The experiment represented by the circuit theory	35
3.4	Circuit theory for FI-S bilayers with exact spin-dependent boundary conditions	36
3.5	General properties of FI-S structures	37
3.6	Comparison: Theory vs. Experiment	42
3.7	Conclusions	45
4	Nonlocal thermoelectric effects in a three terminal S-F device	47
4.1	Abstract	47
4.2	Introduction	47
4.3	Linear response description of three terminal devices	49
4.4	The formalism	50
4.4.1	Scattering approach for spin-active Interfaces	50
4.4.2	Quantum circuit theory, i.e. The dirty limit	51
4.4.3	Ballistic trajectories, i.e. The clean limit	51
4.5	The Thermopower (local and nonlocal)	53
4.5.1	The basic mechanism	53
4.5.2	The nonlocal Thermopower, clean vs. dirty limit	54
4.5.3	Generalization of Onsager's reciprocal relation to non-local currents	57
4.6	Conclusion	57
4.7	Detailed proofs and further discussions	57
4.7.1	Classification of local and nonlocal processes for ballistic three-terminal systems	57
4.7.2	Analytic proof of Onsager's symmetry in the clean limit	58
4.7.3	Vanishing of pure Andreev reflection contributions to the thermoelectric effects in the clean limit	61

4.7.4	Nonlocal origin of all thermoelectric coefficients in the clean limit	62
4.7.5	Various definitions of nonlocal thermopower	63
5	Giant thermoelectric effects in a proximity-coupled S-F device	67
5.1	Abstract	67
5.2	Introduction	67
5.3	The Model	70
5.4	Spin-dependent quasiclassical theory in the dirty limit	72
5.5	Thermopower	75
5.6	Figure of Merit	80
5.7	Temperature Dependence	83
5.8	Conclusions	85
6	Numerical implementation of the spin-dependent quantum circuit theory for arbitrary circuits in the tunneling limit and simulation of a real experiment	87
6.1	Abstract	87
6.2	Introduction	88
6.3	Iterative solution of the circuit theory	89
6.4	The numerical implementation	94
6.4.1	Physically motivated optimizations	94
6.4.2	The work principle and the user interface	95
6.4.3	Numerical optimizations	95
6.5	Simulation of the experiment	97
6.5.1	The experimental setup	97
6.5.2	The setup in the circuit theory	98
6.5.3	Measured results	99
6.5.4	Simulation and comparison	101
6.6	Conclusion	103
7	Summary and Outlook	105
A	Derivation of the Wigner representation	109
B	Analytically solvable extension to chapter 3	113
C	Spin-caloric effects in a transistor like proximity structure	115
