

Contents

1	Future Power Systems	1
1.1	Introduction	1
1.2	Towards a Smart Grid	5
1.2.1	More Renewable Generation in the Future	5
1.2.2	The Core Elements of the European Smart-Grid Vision	9
1.2.3	Changes of the Energy Policy in Europe and the Consequences for Smart Grids	13
1.2.4	Power System Operation in the Future. The Need for More Flexibility in the Smart Grid	19
1.3	Regulatory Boundaries for Smart Grid and Electric Energy Storage.	26
	References.	34
2	Electric Energy Storage System	37
2.1	Requirements for an EES System	37
2.1.1	Development of the EES Use in the Power System.	37
2.1.2	Requirements for EES and Extension of Storage Usability in the Smart Grid	43
2.2	Generic Model of EES.	48
2.2.1	Standardizing Generic Model of EES	48
2.2.2	Physical Surface of the EES Model. Mathematical Generic Model.	55
2.3	EES in the Transmission and Distribution System	57
2.3.1	Factors Influencing the Value of Storage in Transmission Networks	57
2.3.2	EES in the Distribution System	58
2.3.3	Example of Modeling and Implementation of the Models in the Planning and Simulation in Distribution	59
2.3.4	Standardized Models of BES Using the Surface and Interface Structure (SIS)	71

2.4	Storage Systems in Isolated Power Systems	75
2.4.1	Introduction	75
2.4.2	A Case-Based Optimization of Electric Energy Storage Size in an Isolated Power System	75
2.4.3	Multi-Criteria Optimization of IPS	83
	References.	94
3	International Development Trends in Power Systems.	97
3.1	State of the Art.	97
3.2	Smart Grid Concept for the Future Grid	98
3.3	European Scenario	99
3.4	Renewable Energy Development in the Iberian Peninsula.	101
3.5	The Danish Scenario	102
3.6	North American Scenario.	102
3.7	South American Scenario.	105
3.8	Japanese Scenario	107
3.9	Russian Scenario	109
3.10	Chinese Scenario	110
3.11	Australian Scenario	114
	References.	117
4	Need for Storage. Practical Examples.	119
4.1	Methodology of Investigation	119
4.2	Example: Network-Upgrade Deferral	120
4.3	Technical Aspects. Examples from Japan	122
4.4	Storage for Full RES Integration	124
	References.	127
5	Storage Technologies and Systems	129
5.1	Overview	129
5.2	Energy-Storage Performance Indicators	132
5.3	Electric-Energy Storage System Classification	133
5.4	Pumped-Hydroelectric Storage	134
5.5	Flywheel-Energy Storage.	136
5.6	Battery-Energy Storage Systems	140
5.7	Superconducting Magnetic Energy Storage.	146
5.8	Power-to-Gas	148
5.9	Compressed-Air Energy Storage	153
	References.	155
6	Mobile Energy Storage Systems. Vehicle-for-Grid Options	157
6.1	Electric Vehicles.	157
6.2	EV Standards and Technologies for Power and Transportation Systems	161
6.3	Electric-Vehicle Networks as Energy Storage Systems in the Power and Transportation System	176
	References.	179
