1	Introduction	1
1.1	Problem Definition	1
1.1.1	Modeling Technical Systems	3
1.1.2	Definition of a System	5
1.1.3	Simulation and Simulation Environment	5
1.1.4	Vehicle Models	6
1.2	Complete Vehicle Model	9
1.2.1	Vehicle Models and Application Areas	11
1.2.2	Commercial Vehicle Simulation Systems	11
1.3	Outline of the Book	14
1.4	Webpage of the Book	14
	References	15
2	Fundamentals of Mathematics and Kinematics	17
2.1	Vectors	17
2.1.1	Elementary Algorithms for Vectors	17
2.1.2	Physical Vectors	18
2.2	Coordinate Systems and Components	19
2.2.1	Coordinate Systems	19
2.2.2	Component Decomposition	19
2.2.3	Relationship Between Component Representations	20
2.2.4	Properties of the Transformation Matrix	22
2.3	Linear Vector Functions and Second Order Tensors	22
2.4	Free Motion of Rigid Bodies	24
2.4.1	General Motion of Rigid Bodies	24
2.4.2	Relative Motion	28
2.4.3	Important Reference Frames	31
2.5	Rotational Motion	32
2.5.1	Spatial Rotation and Angular Velocity in General Form	32

2.5.2	Parameterizing of Rotational Motion	33
2.5.3	The Rotational Displacement Pair and Tensor of Rotation	34
2.5.4	Rotational Displacement Pair and Angular Velocity.	36
2.5.5	CARDAN (BRYANT) Angles	37
	References.	41
3	Kinematics of Multibody Systems	43
3.1	Structure of Kinematic Chains	43
3.1.1	Topological Modelling	43
3.1.2	Kinematic Modelling.	45
3.2	Joints in Kinematic Chains	47
3.2.1	Joints in Spatial Kinematic Chains	47
3.2.2	Joints in Planar Kinematic Chains.	49
3.2.3	Joints in Spherical Kinematic Chains	49
3.2.4	Classification of Joints.	50
3.3	Degrees of Freedom and Generalized Coordinates	52
3.3.1	Degrees of Freedom of Kinematic Chains.	52
3.3.2	Examples from Road Vehicle Suspension Kinematics.	53
3.3.3	Generalized Coordinates	54
3.4	Basic Principles of the Assembly of Kinematic Chains	55
3.4.1	Sparse-Methods: Absolute Coordinates Formulation.	57
3.4.2	Vector Loop Methods ("LAGRANGE" Formulation)	59
3.4.3	Topological Methods: Formulation of Minimum Coordinates	60
3.5	Kinematics of a Complete Multibody System.	62
3.5.1	Basic Concept	62
3.5.2	Block Wiring Diagram and Kinematic Networks.	63
3.5.3	Relative Kinematics of the Spatial Four-Link Mechanism	64
3.5.4	Relative, Absolute and Global Kinematics.	66
3.5.5	Example: Double Wishbone Suspension	69
	References.	71
4	Equations of Motion of Complex Multibody Systems.	73
4.1	Fundamental Equation of Dynamics for Point Mass Systems	73
4.2	JOURDAIN'S Principle	75
4.3	LAGRANGE Equations of the First Kind for Point Mass Systems	75

4.4	LAGRANGE Equations of the Second Kind for Rigid Bodies	76
4.5	D'ALEMBERT's Principle	78
4.6	Computer-Based Derivation of the Equations of Motion	80
4.6.1	Kinematic Differentials of Absolute Kinematics	81
4.6.2	Equations of Motion	83
4.6.3	Dynamics of a Spatial Multibody Loop	84
	References	92
5	Kinematics and Dynamics of the Vehicle Body	95
5.1	Vehicle-Fixed Reference Frame	95
5.2	Kinematical Analysis of the Chassis	98
5.2.1	Incorporation of the Wheel Suspension Kinematics	99
5.2.2	Equations of Motion	101
	References	102
6	Modeling and Analysis of Wheel Suspensions	103
6.1	Function of Wheel Suspension Systems	103
6.2	Different Types of Wheel Suspension	105
6.2.1	Beam Axles	106
6.2.2	Twist-Beam Suspension	107
6.2.3	Trailing-Arm Axle	108
6.2.4	Trailer Arm Axle	110
6.2.5	Double Wishbone Axles	110
6.2.6	Wheel Suspension Derived from the MacPherson Principle	112
6.2.7	Multi-Link Axles	113
6.3	Characteristic Variables of Wheel Suspensions	115
6.4	One Dimensional Quarter Vehicle Models	118
6.5	Three-Dimensional Model of a MacPherson Wheel Suspension	121
6.5.1	Kinematic Analysis	122
6.5.2	Explicit Solution	126
6.6	Three-Dimensional Model of a Five-Link Rear Wheel Suspension	131
6.6.1	Kinematic Analysis	131
6.6.2	Implicit Solution	134
6.6.3	Simulation Results of the Three Dimensional Quarter Vehicle Model	139
