

Table of Content

Preface	VI
Acknowledgement	VIII
Aim.....	1
1 Introduction	2
1.1 The Tracer Principle	5
1.2 Application in vitro and in vivo	6
1.2.1 Radiopharmaceutical concepts for application in vivo.....	9
1.2.2 Quantification of glucose metabolism	11
1.3 Radionuclides in tracers for PET and SPECT imaging.....	14
1.4 Measurement by PET and SPECT.....	19
1.5 Low amount of tracer not effecting metabolic functions.....	22
1.6 Specific activity.....	24
2 PET Tracers	26
2.1 Carbon-11	26
2.1.1 Production of carbon-11.....	28
2.1.2 [^{11}C]-Synthons for radiosynthesis.....	29
2.1.2.1 Formation of $^{11}\text{CH}_3\text{I}$	32
2.1.3 Radiosynthesis of [^{11}C]-tracers.....	33
2.1.3.1 Radiosynthesis with synthons produced within the target	33
2.1.3.2 Radiosynthesis with synthons produced subsequently	35
2.1.3.3 Labeling by [^{11}C]-alkylation.....	41
2.2 Fluorine-18.....	44
2.2.1 Production of fluorine-18.....	46
2.2.2 Reactions for radiofluorination.....	47
2.2.2.1 Labeling by electrophilic reactions	47
2.2.2.2 Nucleophilicity of [^{18}F]fluoride for nucleophilic substitution ...	49

2.2.2.3	Nucleophilic aliphatic substitution	51
2.2.2.4	Nucleophilic aromatic [¹⁸ F]fluorination	54
2.2.2.5	[¹⁸ F]-Synthons.....	57
2.3	Gallium-68 (⁶⁸ Ga)	67
2.3.1	Availability of ⁶⁸ Ga.....	67
2.3.2	Radiochemistry.....	68
2.3.3	Radiosynthesis.....	69
3	SPECT Tracers	76
3.1	Technetium-99m	76
3.1.1	Procedure for providing technetium-99m	76
3.1.2	Radiolabeling.....	79
3.1.3	^{99m} Tc-Labeled compounds as radiopharmaceuticals for SPECT measurement.....	80
3.2	Radioiodine	84
3.2.1	Role of radioiodine in radiopharmaceutical concepts	86
3.2.2	Methods of production	89
3.2.3	Radiosynthesis.....	90
3.2.3.1	Nucleophilic substitutions of halogens.....	91
3.2.3.2	Direct electrophilic radioiodination and electrophilic demetallation.....	93
3.2.3.3	Prosthetic groups in labeling with radioiodine	97
4	Applications in life sciences.....	99
4.1	FDG for the assay of glucose metabolism	102
4.2	Assay of oxygen metabolism and role of movement.....	105
4.3	PET imaging of brain tumors	106
4.4	Imaging of tumor growth by FLT	111
4.5	Hypoxia imaging.....	114
4.6	Cardiology	120
4.7	Prostate cancer	123

4.8 Imaging of patients with Alzheimer's disease (AD)	129
4.9 Determination of apoptosis in consequence of chemotherapy.....	134
4.10 Assay of neurotransmitter function in brain.....	137
4.11 Drug evaluation in pharmaceutical research.....	142
5 Current situation and perspectives of the PET Method.....	146
5.1 Current situation	146
5.2 Fields of application	147
5.2.1 Oncology.....	147
5.2.2 Neurology and psychiatry	148
5.2.3 Drug development	148
5.3 Technological and scientific improvements	150
5.3.1 Technical progress	150
5.3.2 Routine production of tracers.....	151
5.3.3 Biotechnology and coordination chemistry	152
5.3.4 Interdisciplinarity	153
5.4 Perspectives	155
Further Readings.....	158
Notes of References	160
References.....	164
List of Abbreviations	192
List of Copyright Permissions	196
Table of Figures.....	198
List of Tables.....	206
Index.....	207
Authors	220
