Preface	vii
1 Prerequisites	1
1.1 Factorised groups – basic concepts	1
1.2 Permutability, Sylow permutability, and related properties	10
1.3 Power automorphisms	22
1.4 Dedekind and Iwasawa groups	24
1.5 Pronormality, weak normality, and the subnormaliser condition	26
1.6 SC-groups	31
1.7 Numerical invariants of π -soluble groups	35
2 Groups whose subnormal subgroups are normal, permutable, or Sylow-permutable	52
2.1 Characterisations based on the normal structure	54
2.2 Local characterisations	67
2.3 Characterisations based on subgroup embedding properties	79
2.4 Chief factors of PST-groups	85
3 Products of nilpotent groups	92
3.1 Products of abelian groups	93
3.2 The subgroup structure of a dinilpotent group	100
3.3 Numerical invariants of dinilpotent groups	118
4 Totally and mutually permutable products of groups – structural results	149
4.1 Elementary properties	151
4.2 Nilpotent and supersoluble residuals of totally permutable products	172
4.3 Minimal normal subgroups and nilpotent and soluble residuals of mutually permutable products	184
4.4 Mutually permutable products: residuals and radicals	199
4.5 Mutually permutable products: the core-free intersection case	216
5 Totally and mutually permutable products and classes of groups	227
5.1 Totally and mutually permutable products of nilpotent groups	227
5.2 Totally and mutually permutable products and formation subgroups	252
5.3 Totally permutable products and Fitting classes	270

5.4	Mutually permutable products and other classes of groups	292
5.5	Concluding remarks	300
References	303
List of symbols	319
Index	323
Index of names	331
