Preface	vii
List of Special Symbols	xv
1 Introduction	1
1.1 Symmetric Functions	1
1.2 Essential Basic Notation	3
1.3 The Poisson Summation Formula	4
1.4 Euler–Maclaurin Summation Formulae	5
1.5 Meromorphic Properties of Mellin Transforms	6
2 Infinite Products and Zeta-Regularization	9
2.1 Informal Discussion	9
2.2 A Class of Eligible Sequences $\{x_k\}$	12
2.3 Meromorphic Continuation of the Zeta Function	12
2.4 The Generalized Zeta Function	14
2.5 The Zeta-Regularized Product	15
2.6 Practical Results	18
2.6.1 Zeta-Regularization: a Zeta-Free Recipe	18
2.6.2 A Subclass: “Theta-Eligible” Sequences	19
2.6.3 Explicit Properties of the Generalized Zeta Function ..	21
3 The Riemann Zeta Function $\zeta(x)$: a Primer	23
3.1 Definition and Immediate Properties	23
3.2 The Euler Infinite Product	24
3.3 The Stieltjes and Cumulant Expansions	24
3.4 The Functional Equation and Completed Zeta Function $\Xi(x)$	25
3.5 The Dirichlet Beta Function $\beta(x)$	28
3.6 The Hurwitz Zeta Function $\zeta(x, w)$	28

4	Riemann Zeros and Factorizations of the Zeta Function	33
4.1	Growth Properties of $\zeta(x)$ and $\Xi(x)$	33
4.2	The Riemann Zeros (Basic Features)	34
4.3	Hadamard Products for $\Xi(x)$	35
4.4	Basic Bounds on ζ'/ζ	36
4.5	The (Asymptotic) Riemann–von Mangoldt Formula	39
5	Superzeta Functions: an Overview	41
5.1	First Kind ($\mathcal{Z}$)	42
5.2	Second Kind ($\mathcal{Z}$)	42
5.3	Third Kind ($\mathcal{Z}$)	44
5.4	Further Generalizations (Lerch, Cramér, ...)	44
5.5	Other Studies on Superzeta Functions	45
6	Explicit Formulae	49
6.1	The Guinand–Weil Explicit Formula	49
6.2	Derivation of the Explicit Formula	50
6.3	Pattern-Matching with the Selberg Trace Formula	52
6.3.1	The Selberg Trace Formula (Compact Surface Case)	52
6.3.2	Comparison with the Explicit Formula	53
6.4	Explicit Formulae for the Superzeta Functions	54
6.4.1	The Family of the First Kind $\mathcal{Z}$	54
6.4.2	The Family of the Second Kind $\mathcal{Z}$	56
6.4.3	Concluding Remarks	58
7	The Family of the First Kind $\{\mathcal{Z}(s t)\}$	59
7.1	The Basic Analytical Continuation Formula	59
7.2	Derivations	60
7.2.1	Derivation by Contour Integration	60
7.2.2	Derivation by Eligibility of the Riemann Zeros	62
7.3	Analytic Properties of the Family $\{\mathcal{Z}(s t)\}$	64
7.4	Special Values of $\mathcal{Z}(s t)$ for General t	65
7.5	Imprints of the Central Symmetry $\rho \longleftrightarrow (1 - \rho)$	67
7.5.1	$t \longleftrightarrow (-t)$ Symmetry at Integer t	67
7.5.2	Sum Rules at an Arbitrary Fixed t	68
7.6	Special Values of $\mathcal{Z}(s t)$ at $t = 0$ and $\frac{1}{2}$	69
7.6.1	The Function $\mathcal{Z}_0(s)$ (the Confluent Case $t = 0$)	69
7.6.2	The Function $\mathcal{Z}_*(s)$ (the Case $t = \frac{1}{2}$)	70
7.7	Tables of Formulae for the Special Values of $\mathcal{Z}$	71
7.7.1	Function of First Kind for General t	72
7.7.2	Function of First Kind at $t = 0$ and $\frac{1}{2}$	73

8	The Family of the Second Kind $\{\mathcal{Z}(\sigma t)\}$	75
8.1	The Confluent Case $\mathcal{Z}(\sigma t = 0) \equiv \mathcal{Z}_0(\sigma)$	76
8.2	Meromorphic Continuation in σ for General t	77
8.3	Algebraic Results for $\mathcal{Z}(\sigma t)$ at General t	79
8.4	Transcendental Values of $\mathcal{Z}(\sigma t)$ for General t	80
8.5	Imprints of the Central Symmetry $\rho \longleftrightarrow (1 - \rho)$	80
8.6	Results for $\mathcal{Z}(\sigma t)$ at $t = 0$ and $t = \frac{1}{2}$	82
8.6.1	The Function $\mathcal{Z}_0(s)$ (the Confluent Case $t = 0$)	82
8.6.2	The Function $\mathcal{Z}_*(s)$ (the Case $t = \frac{1}{2}$)	82
8.7	Tables of Formulae for the Special Values of $\mathcal{Z}$	84
8.7.1	Function of Second Kind for General t	84
8.7.2	Function of Second Kind at $t = 0$ and $\frac{1}{2}$	85
9	The Family of the Third Kind $\{\mathfrak{Z}(s \tau)\}$	87
10	Extension to Other Zeta- and L-Functions	91
10.1	Admissible Primary Functions $L(x)$	92
10.2	The Three Superzeta Families	93
10.3	The First Family $\{\mathcal{Z}\}$	94
10.3.1	The Zeta Function $\mathbf{Z}(s t)$ over the Trivial Zeros	94
10.3.2	The Basic Analytical Continuation Formula for $\mathcal{Z}$	95
10.3.3	Special Values of $\mathcal{Z}(s t)$ for General t	96
10.3.4	Special Values of $\mathcal{Z}(s t)$ at $t = 0$ and $\frac{1}{2}$	97
10.4	The Second Family $\{\mathcal{Z}\}$	98
10.4.1	The Confluent Case $\mathcal{Z}(\sigma t = 0) \equiv \mathcal{Z}_0(\sigma)$	98
10.4.2	Algebraic Results for $\mathcal{Z}(\sigma t)$ at General t	98
10.4.3	Transcendental Values of $\mathcal{Z}(\sigma t)$ at General t	99
10.5	The Third Family $\{\mathfrak{Z}\}$	100
10.6	Special Concrete Examples	101
10.6.1	L -Functions of Real Primitive Dirichlet Characters	101
10.6.2	Dedekind Zeta Functions	105
10.7	Tables of Formulae for the Special Values	108
10.7.1	For General Primary Functions $L(x)$ at General t	109
10.7.2	Dirichlet- L Cases, Functions of First Kind at $t = 0$ and $\frac{1}{2}$	110
10.7.3	Dedekind- ζ Cases, Functions of First Kind at $t = 0$ and $\frac{1}{2}$	111
11	Application: an Asymptotic Criterion for the Riemann Hypothesis	113
11.1	Introduction to the Result	113
11.2	Asymptotic Alternative for λ_n , $n \rightarrow \infty$	115

11.2.1	The Case [RH False]	116
11.2.2	The Case [RH True]	117
11.2.3	Recapitulation and Discussion	118
11.3	An Even More Sensitive Sequence	119
11.4	More General Cases: a Summary	121
A	Numerical Explorations	123
A.1	Superzeta Functions of the Second Kind	123
A.2	Superzeta Functions of the First Kind	125
A.3	Numerical Tables	126
B	The Selberg Case	129
B.1	Superzeta Functions of the First Kind	130
B.2	Superzeta Functions of the Second Kind	132
B.3	Tables of Special-Value Formulae (Selberg Cases)	134
C	On the Logarithmic Derivatives at $\frac{1}{2}$	137
D	On the Zeros of the Zeta Function by Hj. Mellin (1917)	139
	References	153
	Index	159
