

Table of contents

Acknowledgements.....	III
Preface.....	IV
Abstract	VII
Zusammenfassung	IX
List of abbreviations	XI
List of tables	XII
List of figures	XIII
Table of contents.....	XX
1. Introduction	1
2. Theory	4
2.1 Advanced wastewater treatment processes	4
2.1.1 Coagulation and flocculation	4
2.1.2 Sedimentation.....	4
2.1.3 Filtration.....	5
2.2 Adsorption.....	6
2.2.1 Equilibrium and kinetics.....	6
2.2.2 Multi-stage adsorption	10
2.2.3 Adsorption processes in advanced wastewater treatment.....	12
3. The recirculation system in pilot scale.....	15
3.1 Material: chemicals and activated carbons	15
3.2 Study area – partially closed urban water cycle	15
3.3 Data basis and analysis	16
3.3.1 Organic micropollutants	16
3.3.2 Phosphorus, Fe and organic sum parameters	18
3.3.3 Limit of quantification, outliers and statistics	19
3.4 Influent concentrations.....	20
3.5 Introduction of the pilot plant	22
3.5.1 General scheme	22
3.5.2 Methods: experimental design	24
3.5.3 PAC content and sludge age	25

XX

3.6	Influence of operating parameters on adsorption	27
3.6.1	Operational stability.....	27
3.6.2	Variation of TSS concentrations.....	28
3.6.3	Influence of the PAC dose.....	32
3.7	Comparison to existing plants.....	36
3.8	Summary	38
4.	Pilot-scale PAC immobilization studies	40
4.1	PAC dosage after coagulation/ flocculation and sedimentation	40
4.1.1	Methods and pilot plant design	40
4.1.2	Results and discussion	41
4.2	PAC dosage prior to flocculation filtration	44
4.2.1	Methods and pilot plant design	44
4.2.2	Results and discussion	44
4.3	Summary	48
5.	Laboratory experiments.....	49
5.1	Material: waters, chemicals and activated carbons	49
5.2	Adsorption capacity of PAC sludge	50
5.2.1	Comparison of adsorption on PAC sludge and fresh PAC.....	50
5.2.2	Reproduction of pilot-plant adsorption.....	52
5.3	Lab-scale biomass inhibition study	55
5.4	Multi-stage PAC loading.....	56
5.4.1	Batch tests.....	56
5.4.2	Model approach.....	59
5.4.3	Isotherm experiments.....	61
5.4.4	Recirculation modeling	63
5.5	Summary	66
6.	Implementation into the Berlin water cycle	68
6.1	Influent composition – dilution of WWTP effluent	68
6.2	Impact of influent concentrations on adsorption.....	70
6.2.1	Impact of DOC influent concentrations	70
6.2.2	Impact of OMP influent concentrations	74
6.3	Evaluation and comparison of the examined processes	77

6.4	Compliance with possible future regulations	79
6.4.1	Current values (measured data)	79
6.4.2	Impact of changing influent water quality.....	80
6.5	Recommendations for Berlin	82
7.	General conclusions and outlook.....	84
7.1	Performance and efficiency of the recirculation system.....	84
7.2	Capacity of partly-loaded PAC and removal mechanisms	85
7.3	Immobilization of PAC in a filter	86
7.4	Integration of OMP adsorption into PEP Tegel.....	87
7.5	Research recommendations	88
	References.....	89
A.	Annex.....	98
