

# Contents

<b>Hilbert Space Methods for Quantum Mechanics</b> .....	1
D. Petz	
1 Hilbert Spaces .....	1
2 Postulates of Quantum Mechanics .....	13
3 Some Applications .....	25
References .....	31
<b>Classical Information Theory</b> .....	33
Y. Suhov	
1 Entropy .....	33
2 Source Coding .....	44
3 Channel Coding .....	53
4 Bibliographical Notes .....	64
References .....	64
<b>Quantum Probability and Quantum Information Theory</b> .....	65
H. Maassen	
1 Introduction .....	65
2 Why Classical Probability Does Not Suffice .....	67
3 Toward a Mathematical Model .....	74
4 Quantum Probability .....	80
5 Operations on Probability Spaces .....	88
6 Quantum Impossibilities .....	98
7 Quantum Novelties .....	104
References .....	108
<b>Bipartite Quantum Entanglement</b> .....	109
F. Benatti	
1 Introduction .....	109
2 Bipartite Entanglement .....	111
3 Entanglement Detection .....	120
4 Complete Positivity, Open Quantum Systems, and Entanglement .....	134
References .....	148

<b>Field-Theoretical Methods</b> .....	151
R. Alicki	
1 Introduction .....	151
2 The Quantum Harmonic Oscillator .....	152
3 Quantum Bosonic Fields .....	159
4 Coherent and Thermal States for Bosons .....	166
5 Second Quantization of Fermions .....	172
6 Further Reading .....	174
References .....	174
<b>Quantum Entropy and Information</b> .....	175
Nilanjana Datta	
1 Introduction .....	175
2 Preliminaries .....	176
3 Rudiments of Classical Information Theory .....	179
4 Quantum Entropy .....	185
5 Data Compression in Quantum Information Theory .....	187
6 Quantum Channels .....	193
7 Accessible Information and the Holevo Bound .....	200
References .....	214
<b>Photonic Realization of Quantum Information Protocols</b> .....	215
M. Genovese	
1 Introduction .....	215
2 Photon Entanglement .....	220
3 Optical Realizations of Quantum Information Protocols .....	232
4 Optical Quantum Computation Protocols .....	233
5 Quantum Communication .....	237
References .....	248
<b>Physical Realizations of Quantum Information</b> .....	253
F. de Melo and A. Buchleitner	
1 Introduction .....	253
2 A Single Qubit in Interaction with the Radiation Field .....	256
3 Qubit Entanglement Through the Jaynes–Cummings Interaction .....	268
References .....	274
<b>Quantum Cryptography</b> .....	277
D. Bruß and T. Meyer	
1 Introduction .....	277
2 Classical Cryptography .....	278
3 Quantum Cryptography .....	279
4 Eavesdropping Strategies .....	287
5 Unconditional Security of BB84 .....	291

6	Defense Against Eavesdropping with Photon Number Splitting (PNS) Attacks .....	301
7	Classical Upper Bounds on the Secret Key Rate .....	302
8	The Role of Entanglement in QKD .....	304
9	Problems/Exercises .....	307
	References .....	308
	<b>Quantum Algorithms</b> .....	309
	J. Kempe and T. Vidick	
1	Notations .....	310
2	The Quantum Circuit Model .....	312
3	First Algorithms .....	316
4	The Quantum Fourier Transform .....	319
5	Deutsch–Josza and Simon’s Algorithms .....	323
6	Factoring in Polynomial Time .....	326
7	The Hidden Subgroup Problem .....	331
8	Grover’s Algorithm for Unstructured Search .....	334
9	Developments .....	338
	References .....	340
	<b>Index</b> .....	343
