Preface *xiii*

- 1 Alkaline-Earth Metal-Based Chiral Lewis Acids 1**
Anna Domžalska, Artur Ulikowski and Bartłomiej Furman
 - 1.1 Introduction 1
 - 1.2 General Properties of Alkaline Earth Metal Compounds 1
 - 1.3 Applications in Asymmetric Synthesis 2
 - 1.3.1 Cycloaddition Reactions 2
 - 1.3.2 Carbonyl and Imine Addition Reactions 8
 - 1.3.3 Conjugate Addition Reactions 14
 - 1.3.4 Other Reactions 21
 - References 23
- 2 Titanium-Based Chiral Lewis Acids 27**
Jun Wang and Xiaoming Feng
 - 2.1 Introduction 27
 - 2.2 Asymmetric Addition of Carbon Nucleophiles to Carbonyl Compounds 27
 - 2.3 Asymmetric Cyanide Addition Reaction 30
 - 2.4 Asymmetric Epoxidation 31
 - 2.5 Asymmetric Darzens Reaction 35
 - 2.6 Asymmetric Ring-opening Reaction 36
 - 2.7 Asymmetric Sulfoxidation Reaction 39
 - 2.8 Asymmetric Hetero-Diels–Alder (HDA) Reaction 42
 - 2.9 Asymmetric Fluorination of 1,3-Dicarbonyl Compounds 44
 - 2.10 Asymmetric Sulfenylation of 1,3-Dicarbonyl Compounds 45
 - 2.11 Asymmetric Formal Intramolecular C(sp²)–H Insertion of *N*-Aryl α -Diazoamides 46
 - 2.12 Asymmetric Reduction of Ketones 46
 - 2.13 Asymmetric Hydroalkoxylation of Nonactivated Alkenes 47
 - 2.14 Asymmetric Titanium(III)-Catalyzed Reductive Coupling Reactions 47
 - 2.15 Asymmetric 1,3-Dipolar Cycloaddition of Nitrone and Unsaturated Aldehyde 50
 - 2.16 Asymmetric Friedel–Crafts Alkylation Reaction 51
