Preface *xv*

1	Light-responsive Surface: Photodeformable Cross-linked Liquid-Crystalline Polymers Based on Photochemical Phase Transition	1
	<i>Lang Qin and Yanlei Yu</i>	
1.1	Introduction	1
1.2	Photochemical Phase Transition	2
1.3	Photodeformation	3
1.3.1	Photoinduced Contraction and Expansion	3
1.3.2	Photoinduced Bending Movements	4
1.3.3	Photoinduced Twisting Movements	10
1.4	Effect Factors of Photodeformation	13
1.5	Deformation Induced by Visible and NIR Light	18
1.6	Soft Actuators Based on CLCPs	22
1.6.1	Macro-scaled Actuators	22
1.6.2	Micro-scaled Actuators	23
1.7	Summary	28
	References	30
2	Inkjet Printed Liquid Crystal Cilia	35
	<i>Casper L. van Oosten, Cees W.M. Bastiaansen, and Dirk J. Broer</i>	
2.1	Introduction	35
2.2	Thermal Actuation Based on Anisotropic Thermal Expansion	37
2.3	Light Stimulated Deformation	41
2.4	Inkjet Printing Actuators: Toward Polymer Cilia	44
2.5	Conclusion	53
	Acknowledgment	53
	References	53

3	Liquid Crystal Coatings Switched between Flat and Corrugated Surface Texture	57
	<i>Danqing Liu and Dirk J. Broer</i>	
3.1	Introduction	57
3.2	Liquid Crystal Networks	58
3.3	Thermal-Responsiveness	60
3.4	Photo-Responsive Liquid Crystal Networks	61
3.5	Photo-Induced Surface Deformation	62
3.6	Photo-Induced Surface Deformation Preset by Patterned Director Orientation	66
3.7	Mechanism of Surface Deformation	73
3.8	Conclusions	79
	References	79
4	Computational Modeling of Light-triggered Topography Changes of Azobenzene-modified Liquid Crystal Polymer Coatings	85
	<i>Ling Liu and Patrick R. Onck</i>	
4.1	Introduction	85
4.2	Photo-mechanical Model	88
4.2.1	Light Penetration Model	88
4.2.2	Constitutive Equations	90
4.3	Results and Discussion	92
4.3.1	Light Penetration	93
4.3.2	Polydomain Coatings	94
4.3.3	Linearly Patterned Coatings	99
4.3.3.1	Effect of the In-plane Dimensions	101
4.3.3.2	Effect of Cholesteric Pitch Length	102
4.3.3.3	Effect of Transition Area	104
4.3.4	Fingerprint Coatings	105
4.3.5	Comparison and Discussion	110
4.4	Conclusions and Outlook	113
	Acknowledgment	114
	References	114
5	Dynamic Tribology in Liquid Crystal Coatings	123
	<i>Danqing Liu and Dirk J. Broer</i>	
5.1	Introduction	123
5.2	Dynamic Friction Analysis	124
5.2.1	Coating with a Fingerprint Texture	125
5.2.2	Coatings with a Polydomain Texture	126
5.2.3	Linear Protrusions	128
5.3	Static Friction Coefficients	132
5.4	Conclusions	133
	References	134

6	Actuating Hydrogel Thin Films	137
	<i>Leonid Ionov</i>	
6.1	Introduction	137
6.2	Hydrogel Bilayer	138
6.3	Patterned Hydrogel Film	141
6.4	Bending of Complex Structures	142
6.5	Intrinsic Anisotropy	143
6.6	Applications of Hydrogel Actuators	145
6.6.1	Sensors	145
6.6.2	Smart Lenses	145
6.6.3	Imaging Devices	146
6.6.4	Switchable Coloration	146
6.6.5	Elements of Microfluidic Devices	147
6.6.6	Walkers and Swimmers	148
6.6.7	3D Microfabrication	150
6.6.8	Biomaterials	151
6.6.9	Stimuli-responsive Surfaces	151
6.7	Conclusions and Outlook	152
	References	152
 7	 Photoresponsive Polymer Hydrogel Coatings that Change Topography	 159
	<i>Jelle E. Stumpel, Jeroen ter Schiphorst, and Albertus P. H. J. Schenning</i>	
7.1	Introduction	159
7.2	Photoresponsive Polymer Hydrogel Coatings	160
7.2.1	Light Induced Heating	161
7.2.2	Photochromic Dyes	161
7.3	Photoresponsive Mixing and Flow Control in Microfluidic Devices	163
7.4	Photoresponsive Wettability	167
7.5	Photoresponsive Cell Adhesion	167
7.6	Conclusions and Perspectives	169
	References	170
 8	 Electrically Responsive Fluoropolymer Surfaces and Devices	 175
	<i>Hao Wu and Robert A. Hayes</i>	
8.1	Electrically Responsive Surfaces	175
8.1.1	The Effect of Gravity on Electrowetting Systems	177
8.1.2	Ideal and Non-ideal Electrowetting Behavior	178
8.2	Electrowetting Materials	179
8.2.1	Inorganic Insulators	181
8.2.2	Electrowetting with Oil	182
8.2.3	Processing on Top of the Fluoropolymer	183
8.3	Historical Development and Devices	186
8.4	Electrofluidic Arrays	187

8.5	Industrialization	188
8.6	Challenges and Conclusions	189
	References	191
9	Functional Polymer Surfaces via Post-polymerization Modification	193
	<i>Wenwen Xue, Xiao-Lei Gong, and Patrick Theato</i>	
9.1	Introduction	193
9.2	Polymer Brushes	193
9.2.1	Activated Ester-amine	195
9.2.2	Thiol-based Reactions	199
9.2.3	Azide–Alkyne Cycloadditions	201
9.3	Reactive Polymer Layers	203
9.3.1	Overview of Coatings	203
9.3.2	Physisorption	203
9.3.3	Layer-by-Layer Self-Assembly	204
9.3.4	LbL Assembly Based on Covalent-bonding	205
9.3.5	Electrochemical Polymerization	206
9.3.6	Self-Polymerization of Dopamine (PDOPA)	207
9.3.7	Au–S bond	208
9.3.8	Plasma Treatment	209
9.3.9	Other Methods	210
9.4	Concluding Remarks	211
	References	211
10	Haptic Perception of Material Properties	225
	<i>Astrid M.L. Kappers and Wouter M. Bergmann Tiest</i>	
10.1	Introduction	225
10.2	Experimental Methods	225
10.2.1	Discrimination	226
10.2.2	Search Paradigm	226
10.2.3	Matching	227
10.2.4	Ordering and Sorting	227
10.3	Roughness	228
10.3.1	Sorting Experiment	228
10.3.2	Ordering Experiment	229
10.3.3	Two-dimensional Search	231
10.3.4	Three-dimensional Search	232
10.3.5	Hand Movements	233
10.3.6	Discrimination and Identification	234
10.3.7	Discussion	235
10.4	Compliance	236
10.4.1	Free Sorting	237
10.4.2	Discrimination	237
10.4.3	Matching	239
10.4.4	Two- and Three-dimensional Search	239
10.4.5	Hand Movements	241

10.4.6	Discussion	241
10.5	Temperature	242
10.5.1	Discrimination of Heat Flow	242
10.5.2	Discrimination of Thermal Diffusivity	243
10.5.3	Three-dimensional Search	244
10.5.4	Hand Movements	245
10.5.5	Discussion	246
	References	247
