Table of contents

List of abbreviations iii
Preface v

1.0 CHAPTER 1: Introduction 1
1.1 The extent of the East Coast Fever problem: geographical scale and economic impact 1
1.2 Development of *T. parva* parasites and the disease process 2
1.2.1 Haploid mammalian life cycle stages 2
1.2.2 Transient diploid life cycle in the tick gut 3
1.3 References 5

2.0 CHAPTER 2: Literature review - Research milestones with impact on ECF control 7
2.1 ECF control: limitations of available control options 7
2.1.1 Acaricides and chemotherapy 7
2.1.2 Immunization with live sporozoites and a long acting formulation of tetracycline 7
2.2 The efficacy of subunit vaccine candidates under experimental and field conditions: data gaps and areas of uncertainty 9
2.2.1 Peptides derived from schizont antigens complexed with cattle class I MHC induce protective $CD8^+$ T-cell responses 10
2.2.2 An experimental recombinant anti-sporozoite vaccine induces antibody based protection 13
2.3 Study objectives 15
2.4 References 20

3.0 CHAPTER 3: Publication I 23
Sequence diversity between class I MHC loci of African native and introduced *Bos taurus* cattle in *Theileria parva* endemic regions: *in silico* peptide binding prediction identifies distinct functional clusters 26
Abstract 27
Introduction 28
Materials and methods 32
Taurine samples, RNA isolation and cDNA synthesis 32
Ankole class I MHC amplicon library construction and pyrosequencing 32
Variant calling: putative alleles, artefacts and chimeras 33
Generation of cattle class I cDNA-PCR clone libraries and Sanger sequencing 34
In silico clustering of cattle class I MHC sequences based on predicted ligand Selectivity 35
$CD8^+$ T-cell specificities in the peripheral circulation of T. parva infected Ankole Cattle 35
Results 37
A high throughput assessment of class I MHC diversity from a population of Ankole Cattle 37
Holstein class I MHC amplification, plasmid sub-cloning and Sanger sequencing 46
Departure from neutrality at the class I MHC locus in *Bos taurus* cattle 48
In silico analysis of peptide-binding motifs for Ankole and Holstein class I MHC proteins 52
Recognition of *T. parva* candidate vaccine antigens in seropositive Ankole cattle 57
Discussion 61
Acknowledgments 65

4.0 CHAPTER 4: Publication II 70
Molecular evolution of a central region containing B-cell epitopes in the gene encoding the p67 sporozoite antigen within a field population of *Theileria parva* 72
Abstract 73
Introduction 74
Materials and methods 76
Parasite isolates and genomic DNA extraction 76
Amplification and sequencing of the gene encoding *T. parva* p67 78
p67 linear epitope sequence alignments, variant calling and sequence logo creation 78
Selection of best-fit nucleotide substitution models for *T. parva* p67 evolution 79
Assessing model fits by using Akaike information criterion (AIC) 79
Results 81
p67 gene variants among *T. parva* isolates from Marula ranch (central Kenya) 81
Sequence polymorphism between antibody epitopes within the *p67* gene for Marula isolates 82
Position specific enrichment and depletion of residues within the p67 linear epitopes 83
Analysis of Marula *p67* sequences revealed an excess of nucleotide substitutions resulting from transitions relative to transversions 84
Spatial clustering of positively selected codons in the *p67* gene 86
Discussion 88
Acknowledgements 91
References 92

5.0 CHAPTER 5: Overall discussion and recommendations 95
