Preface — V

List of contributing authors — XV

Cristina Acebo, Xavier Ramis and Angels Serra

1	Improved epoxy thermosets by the use of poly(ethyleneimine) derivatives — 1
1.1	General introduction — 1
1.2	General concepts of epoxy thermosets — 1
1.3	Curing agents — 3
1.4	Characteristics of epoxy thermosets — 9
1.4.1	Toughness — 10
1.4.2	Shrinkage — 11
1.4.3	Reworkability — 12
1.4.4	Scratch resistance — 13
1.5	Dendritic polymers — 14
1.5.1	Hyperbranched polymers — 16
1.5.2	Star polymers — 17
1.6	Modified epoxy thermosets by using HBPs and other highly branched topologies — 18
1.7	HBPs and multiarm SPs from PEI — 20
1.8	Modification of hyperbranched PEI with long alkyl chains and its use as modifier in epoxy thermosets — 23
1.9	Synthesis of multiarm SPs by ROP and their use as modifiers in epoxy thermosets — 25
1.10	Ethoxysilylation of hyperbranched PEI and the use in the preparation of hybrid thermosets — 29
1.11	Use of modified hyperbranched PEI as a macromonomer in the preparation of thermosets by a two-stage click-chemistry process — 33
	References — 38

Iuliana Cota

2	Developments in the use of rare earth metal complexes as efficient catalysts for ring-opening polymerization of cyclic esters used in biomedical applications — 51
2.1	Biodegradable polymers — 51
2.2	Polymerization mechanisms for polyester synthesis — 52
2.3	Catalysts for ROP of PLAs — 55
2.4	Rare earth-based catalysts for synthesis of PLAs — 56

2.5	Conclusions — 77
	References — 79

Kamila Szalata and Tania Gumi

3	BioArtificial polymers — 85
3.1	Introduction — 85
3.2	Biomolecule immobilization techniques — 87
3.2.1	Adsorption — 87
3.2.2	Covalent binding — 88
3.2.3	Entrapment — 88
3.2.4	Encapsulation — 89
3.3	Polymer/biomolecule conjugates — 89
3.3.1	Enzymes — 90
3.3.2	Polysaccharides — 94
3.3.3	Channels — 98
3.3.4	Nucleic acids — 101
3.3.5	Cells — 104
3.4	Summary — 106
	References — 107

Raffaele Conte, Ilenia De Luca, Anna Valentino, Anna Di Salle, Anna Calarco,
Francesco Riccitiello and Gianfranco Peluso

4	Recent advances in “bioartificial polymeric materials” based nanovectors — 113
4.1	Introduction — 113
4.1.1	Bioartificial polymeric materials — 113
4.1.2	Nanotechnology and medicine — 115
4.2	Bioartificial polymeric nanovectors — 116
4.2.1	Nanospheres and Nanocapsules — 117
4.2.2	Nanohydrogels and nanoaggregates — 122
4.2.3	Micelles (MCs) and solid lipid nanoparticles (SLNs) — 125
4.2.4	Nanofibers — 129
4.3	Conclusion — 133
	References — 133

Valentina Marturano, Pierfrancesco Cerruti and Veronica Ambrogì

5	Polymer additives — 139
5.1	Introduction — 139
5.1.1	Role of polymer additives — 139
5.1.2	Additives incorporation in polymer formulation — 140
5.2	Plasticizers — 141

5.2.1	Mechanism of plasticisation —	142
5.2.2	Classification of plasticizers —	143
5.2.3	Bio-based plasticizers —	145
5.3	Flame retardants —	145
5.3.1	Halogenated FRs —	146
5.3.2	Phosphorus-based FRs —	148
5.3.3	Inorganic FRs —	148
5.3.4	Bio-based FRs —	148
5.4	Impact modifiers —	150
5.4.1	Butadiene based graft copolymers —	151
5.4.2	Acrylic modifiers —	152
5.4.3	Elastomers —	153
5.5	Antioxidants and UV stabilizers —	153
5.5.1	Antioxidants —	153
5.5.2	UV stabilizers —	158
5.5.3	Natural antioxidants —	160
5.6	Antimicrobials —	162
5.6.1	Organic antimicrobial agents —	162
5.6.2	Inorganic antimicrobial agents —	163
5.6.3	Natural antimicrobial additives for polymers —	165
	References —	166

Anna Trojanowska, Adrianna Nogalska, Ricard Garcia Valls, Marta Giamberini and Bartosz Tylkowski

6 Technological solutions for encapsulation — 171

6.1	Introduction —	171
6.2	Chemical methods —	173
6.2.1	Interfacial polymerization —	173
6.2.2	<i>In situ</i> polymerization —	176
6.3	Physicochemical methods —	179
6.3.1	Coacervation —	179
6.3.2	Layer by layer —	181
6.3.3	Sol–gel encapsulation —	184
6.3.4	Suspension cross-linking —	185
6.4	Physicomechanical methods —	186
6.4.1	Spray-drying —	186
6.4.2	Co-extrusion —	190
6.4.3	Fluidized-bed spray coating —	194
6.4.4	Phase-inversion precipitation —	195
6.5	General conclusions —	196
	References —	197

Monissa Paderes, Deepak Ahirwal and Susana Fernández Prieto

7 Natural and synthetic polymers in fabric and home care applications — 203

- 7.1 Introduction — 203**
- 7.2 Benefits of polymers in fabric and home care formulations — 205**
 - 7.2.1 Soil release — 206**
 - 7.2.2 Dispersant — 207**
 - 7.2.3 Anti-redeposition — 207**
 - 7.2.4 Dye transfer inhibitors — 208**
 - 7.2.5 Rheology modifier — 209**
- 7.3 Natural and synthetic polymers — 211**
 - 7.3.1 Synthetic polymers — 211**
 - 7.3.2 Natural polymers — 219**
 - 7.3.3 Carrageenan — 226**
 - 7.3.4 Alginates — 228**
- 7.4 Conclusions — 229**
- References — 230**

Karolina Wieszczycka and Katarzyna Staszak

8 Polymers in separation processes — 235

- 8.1 Polymers as membranes — 235**
 - 8.1.1 Introduction — 235**
 - 8.1.2 Reverse osmosis — 237**
 - 8.1.3 Nanofiltration — 238**
 - 8.1.4 Ultrafiltration — 241**
 - 8.1.5 Dialysis — 246**
 - 8.1.6 Membrane extraction — 251**
- 8.2 Polymer resins — 255**
 - 8.2.1 Ion-exchange resin — 255**
 - 8.2.2 Solvent impregnated resin — 260**
- References — 268**

Bartosz Tylkowski and Irene Tsibranska

9 Polymer application for separation/filtration of biological active compounds — 277

- 9.1 Introduction — 277**
 - 9.1.1 Membranes used for separation of biologically active compounds — 278**
 - 9.1.2 Concentration and purification of bioactive compounds from natural extracts — 279**
 - 9.1.3 Recovery of extraction solvents — 287**
- References — 288**

Justyna Walkowiak-Kulikowska, Joanna Wolska and Henryk Koroniak

10 Polymers application in proton exchange membranes for fuel cells (PEMFCs) — 293

- 10.1 Introduction — 293
- 10.2 Historical background — 294
- 10.3 Fuel cells — 296
- 10.3.1 Alkaline fuel cells (AFCs) — 297
- 10.3.2 Phosphoric acid fuel cells (PAFCs) — 298
- 10.3.3 Solid oxide fuel cells (SOFCs) — 298
- 10.3.4 Molten carbonate fuel cells (MCFCs) — 299
- 10.3.5 Direct methanol fuel cells (DMFCs) — 299
- 10.3.6 Proton exchange membrane fuel cells (PEMFCs) — 300
- 10.4 Proton exchange membranes for fuel cells — 304
- 10.4.1 Poly(perfluorosulphonic acid) membranes — 305
- 10.4.2 Partially fluorinated and non-fluorinated polystyrene-based membranes — 308
- 10.4.3 Polybenzimidazole/ H_3PO_4 membranes — 312
- 10.4.4 Polyphosphazene membranes — 314
- 10.4.5 Sulphonated polyimide membranes — 316
- 10.4.6 Sulphonated poly(arylene ether ketone)-based membranes — 318
- 10.4.7 Natural polymer- and bio-inspired-based membranes — 322
- 10.5 Synthetic methods of PEMs preparation — 323
- 10.6 Applications of PEM fuel cell technology — 327
- 10.7 Summary and future perspectives — 332
- References — 333

Adrianna Nogalska, Anna Trojanowska and Ricard Garcia-Valls

11 Membrane contactors for CO_2 capture processes – critical review — 349

- 11.1 Introduction — 349
- 11.2 Membrane contactors — 351
- 11.3 Membranes — 352
- 11.3.1 Ceramics — 352
- 11.3.2 Polymers — 354
- 11.3.3 Biocomposite — 355
- 11.4 Absorbents — 356
- 11.5 Conclusions — 357
- References — 357

Maciej Staszak

12 Modeling and simulation of membrane process — 361

- 12.1 Introduction — 361
- 12.2 Zero-dimensional modeling — 362

- 12.2.1 Basic modeling description — **362**
- 12.2.2 Molecular modeling — **371**
- 12.2.3 Neural networks modeling — **379**
- 12.3.2 Boltzmann lattice models — **389**
- References — **397**

Bartosz Tylkowski, Anna Trojanowska, Martyna Nowak, Lukasz Marciniak and Renata Jastrzab

- 13 Applications of silver nanoparticles stabilized and/or immobilized by polymer matrixes — 401**
 - 13.1 Nanotechnology — **401**
 - 13.2 Silver nanoparticles — **403**
 - 13.2.1 Polymeric composite membranes containing silver nanoparticles for antifouling properties during water and wastewater treatment — **404**
 - 13.2.2 Polymeric stabilized silver nanoparticles for SERS properties — **413**
 - 13.2.3 Polymeric stabilized silver nanoparticles as catalyst — **416**
 - 13.2.4 Silver polymer-based material in medical applications — **418**
 - References — **421**

Tomasz Runka

- 14 Spectroscopic properties of polymer composites — 427**
 - 14.1 Introduction — **427**
 - 14.1.1 Review of results — **430**
 - 14.1.2 Polymer composites with graphene — **431**
 - 14.1.3 Polymer composites with carbon nanotubes — **437**
 - 14.1.4 Polymer composites with GNRs — **445**
 - 14.1.5 Examples of other polymer composites — **448**
 - 14.2 Summary — **452**
 - References — **453**

Lorenc Gavilà, Edgar J Güell, Biniam T Maru, Francesc Medina and Magda Constantí

- 15 Combining catalytical and biological processes to transform cellulose into high value-added products — 457**
 - 15.1 Introduction — **457**
 - 15.2 Materials and methods — **459**
 - 15.2.1 Preparation of the supports and catalysts — **459**
 - 15.2.2 X-ray diffraction (XRD) — **459**
 - 15.2.3 Cellulose characterization — **460**
 - 15.2.4 Cellulose hydrolysis — **460**

15.2.5	Fermentation —	460
15.2.6	Analytical methods —	461
15.3	Results and discussion —	462
15.3.1	Cellulose hydrolysis —	462
15.3.2	Fermentation of the water-soluble fractions (WSFs) —	464
15.4	Conclusions —	466
	References —	467
 Index —		469
