

Table of contents

Preface..... 5

1. Introduction 11

1.1 Introduction to coil winding technology 11

1.1.1 Definition of coil winding technology 12

1.1.2 Delimitation of winding technology from other
manufacturing processes..... 13

1.1.3 Typical process chain for the production of winding goods 15

1.2 Introduction to coil technology..... 18

1.2.1 Definition of coils..... 19

1.2.2 Physical principles..... 21

1.2.3 Coil types..... 36

1.2.4 Introduction to bobbins 41

1.2.5 Introduction to bobbin materials..... 53

1.2.6 Coil design influences on manufacturing properties 61

1.3 Introduction to electric motors 68

1.3.1 Definition of electric motors 69

1.3.2 Functional principles of electric motors 71

1.3.3 Applications of electric motors 79

1.3.4 General requirements for windings..... 85

1.3.5 Concentrated windings for electric motors..... 86

1.3.6 Distributed windings for electric motors..... 87

2. Enamelled copper wire 93

2.1 Conductor properties 93

2.1.1 Copper as an electrical conductor 94

2.1.2 Other conductor materials..... 100

2.1.3 Geometries of the conductor cross section and
conductor variants 103

2.2	Process chain for conductor manufacturing using the example of enamelled copper wire	109
2.2.1	Process chain overview.....	109
2.2.2	Drawing processes	112
2.2.3	Rolling process	115
2.2.4	Continuous annealing process	116
2.2.5	Cleaning processes.....	119
2.3	Conductor insulation.....	121
2.3.1	Definition of insulation properties and testing procedures	122
2.3.2	Introduction to insulation materials.....	125
2.3.3	Enamelling processes for insulation application.....	127
2.4	Use of lubricants	133
2.4.1	Definition of lubricant properties	133
2.4.2	Introduction to lubricant materials	135
2.4.3	Processes for lubricant application	135
3.	Winding technology	139
3.1	Basics of winding technology	140
3.1.1	Physical basics	140
3.1.2	Introduction to winding schemes.....	145
3.2	Central functions of winding technology	160
3.2.1	Wire tension control.....	160
3.2.2	Balancing free wire lengths.....	165
3.3	Winding processes	168
3.3.1	Introduction to winding processes	168
3.3.2	Machine elements of winding technology.....	171
3.3.3	Control technology for winding tasks.....	175
3.3.4	Linear winding technology	178
3.3.5	Flyer winding technology	191
3.3.6	Needle winding technology.....	199
3.3.7	Toroidal winding technology.....	209
3.3.8	Insertion technology.....	211
3.3.9	Trickle winding or Fed-in winding.....	217
3.3.10	Selection methodology for winding processes.....	221
3.3.11	Analysis of winding faults	224
3.4	Peripheral processes.....	229
3.4.1	Preparing assembly processes.....	229
3.4.2	Contacting processes	231
3.4.3	Bonding processes.....	233
3.4.4	Coil testing	236
3.4.5	Subsequent assembly processes.....	238
3.4.6	Secondary insulation	239

4. Automation..... 245

4.1 Introduction..... 245

4.1.1 Definition of automation..... 246

4.1.2 Criteria for the degree of automation..... 249

4.1.3 Parameters for process automation 251

4.1.4 Different phases of automation 257

4.1.5 Amortisation scenarios 259

4.2 Automation Concepts..... 266

4.2.1 Industrial assembly concepts..... 266

4.2.2 Conveying systems and layouts for manufacturing lines 270

4.2.3 Types of interlinkage for manufacturing lines 276

4.2.4 Degrees of automation for winding machines 278

4.2.5 Part properties relevant to automation 279

4.3 Automation techniques 282

4.3.1 Common automation solutions 282

4.3.2 Integration of manual workplaces 286

4.4 Operation of automation..... 288

4.4.1 Quality control 288

4.4.2 Error susceptibility – process capability..... 290

4.4.3 Error diagnosis 294

4.4.4 Maintenance 296

4.4.5 Requirements for operating..... 298
