1	Introduction	1
2	Climate Conditions and Classification	5
2.1	The Climate Elements	5
2.1.1	Solar Radiation	5
2.1.2	Temperature	9
2.1.3	Precipitation	12
2.2	Classification of Climates	17
2.2.1	A. Tropical Humid Zones	17
2.2.2	B. Dry Zones	17
2.2.3	C. Subtropical Zones	19
2.2.4	D. Temperate Zones	21
2.2.5	E. Boreal	21
2.2.6	F. Polar	21
2.2.7	Tropical and Equatorial Zone	21
2.2.8	Subtropical Climate: C	23
2.2.9	Dry Climates: B	24
2.2.10	Highlands: H	24
3	Crop Growth Requirements and Climate Control	29
3.1	Climate Requirements	29
3.2	Consequences for Greenhouse Construction	30
3.3	Measures for Climate Control	30
3.4	Tropical Regions	31
3.5	Subtropical Regions	33
3.6	Arid Regions	42
4	Design Criteria for Greenhouses	45
4.1	Greenhouse Types	46
4.2	Site Selection	46
4.3	General Design Criteria	47

4.4	Loads for Greenhouse Structures	47
4.5	General Requirements	48
4.5.1	Ar: Tropical Wet Climates	48
4.5.2	Aw: Tropical Wet and Dry Climates	49
4.5.3	Cf: Subtropical Humid	50
4.5.4	Cs: Subtropical Dry Summer, Mediterranean	51
4.5.5	H: Tropical Highlands	51
4.5.6	B: Dry Climates	52
4.6	General Design Requirements	52
4.6.1	A. Structure	52
4.6.2	B. Climate Control	56
4.6.3	C. Integrated Plant Production and Protection (IPP)	57
5	Greenhouse Structures	59
5.1	Round Arched Tunnel Greenhouses	62
5.1.1	Improvements for Tunnel Greenhouses	65
5.1.2	Dimensions	66
5.1.3	Pointed Arched Construction	68
5.1.4	Enlarged Tunnel Greenhouse	69
5.2	Multi-Span Greenhouses	71
5.3	Greenhouses for Tropical Lowlands	76
5.4	Greenhouses for Tropical Highlands and Subtropics	85
5.5	Greenhouse Constructions for Arid Regions	90
5.6	Screen and Shade Houses	93
5.7	Specific Greenhouses	100
5.7.1	Parral Type, Almeria	100
5.7.2	Greenhouses for Banana	104
5.7.3	Greenhouses for Terraces	104
5.7.4	Tent-type Construction	106
5.8	Life Cycle Assessment, LCA	111
5.8.1	Results	128
6	Light Transmittance of Greenhouses	137
7	Cladding Material	145
7.1	Materials	145
7.1.1	Ultra Violet Radiation (UV)	147
7.1.2	Photosynthetic Active Radiation PAR or Visible Light	147
7.1.3	LongWave Radiation, Far Infrared FIR	148
7.2	Influence of Dust and Dirt	148
7.3	Influence of Selective Spectral Transmittance	149
7.3.1	Transmittance and Blocking of UV Radiation	152
7.3.2	Photoselective Plastic Films and Screens	157
7.3.3	Near Infrared (NIR) Blocking and Reflecting Materials	159
7.3.4	Diffuse Light	162
7.3.5	Drop Condensation	162

- 8 Greenhouse Components, Mounting, Installation and Maintenance** 169
 - 8.1 Foundation 169
 - 8.2 Connections and Clamps 170
 - 8.2.1 How to Do and How Not to Do the Clamp Connections 171
 - 8.3 Fastening and Stretching of the Cladding Material 174
 - 8.4 Leaks 179
 - 8.5 Windbreaks 185

- 9 Ventilation** 193
 - 9.1 Natural Ventilation 193
 - 9.1.1 Air Exchange 194
 - 9.1.2 Ventilation Opening Area 195
 - 9.1.3 Ventilation Efficiency 199
 - 9.2 Types of Natural Ventilation Openings 200
 - 9.2.1 Side Wall Ventilation 200
 - 9.2.2 Roof Ventilation 201
 - 9.2.3 Side Wall and Roof Ventilation 215
 - 9.2.4 Ventilation of Specific Greenhouses 220
 - 9.3 Forced Ventilation 228

- 10 Insect Screening** 233
 - 10.1 Enlargement of Screened Vent Openings 235
 - 10.2 Necessary Enlargement of Screened Vent Openings 237
 - 10.2.1 Method of Sase and Christiansen (1990) 237
 - 10.2.2 Calculation of A_S/A_V by using methods of Bailey et al. (2003) and Teitel (2006) 238
 - 10.3 Climate Conditions and Pest Control 240

- 11 Cooling** 251
 - 11.1 Fan and Pad Cooling 252
 - 11.2 Pad Location 254
 - 11.3 Vertical Pad System and Water Circulation 254
 - 11.4 Horizontal Pads 255
 - 11.5 Pad Efficiency 255
 - 11.6 Pad Material and Thickness 257
 - 11.6.1 Pad Area 260
 - 11.6.2 Pad Installation and Maintenance 262
 - 11.6.3 Operation of Fan and Pad System 263
 - 11.7 Fans 264
 - 11.7.1 Air and Water Flow Rate 265
 - 11.8 Fog System 270
 - 11.8.1 Upward Fogging 274
 - 11.9 Spray Cooling 276

12 Heating	285
12.1 Heat Requirement	286
12.2 Fuel Consumption	288
12.3 Heating Systems	290
12.4 Geothermal Energy for Greenhouse Heating	297
12.5 Solar Heating	301
13 Crop Water Requirement and Water Use Efficiency	313
13.1 Crop Water Requirement	313
13.1.1 This Penman–Monteith Method Can Also Be Applied for Greenhouse Conditions, if the Parameters Are Adapted to Greenhouse Climate Conditions	314
13.1.2 Example 1: Almeria (Spain)	316
13.1.3 Example 2: Bangkok (Thailand)	316
13.1.4 Example 3: Antalya (Turkey) and Bangalore (India)	316
13.2 Water Use Efficiency	317
14 Rainwater Collection and Storage	321
14.1 Calculation of the Storage Volume	322
14.2 Example 1: Storage Volume for Climate Conditions in Bangalore (India)	323
14.3 Example 2: Storage Volume for Climate Conditions in Antalya (Turkey)	324
14.4 Design of Rainwater Storage Basins	324
15 Desalination of Salty Water and Closed-System Greenhouses	329
15.1 Solar Desalination Systems	329
15.2 Closed-System Greenhouse	332
16 CO₂ Enrichment	341
Annexes	343
Annex A	343
Annex B	346
Annex C	347
