Preface — v

1 Introduction — 1

2 The Hele–Shaw problem — 25
2.1 Classical solution to the Hele–Shaw problem — 25
2.1.1 The problem setting — 25
2.1.2 The equivalent problem in a fixed domain — 26
2.1.3 Auxiliary results — 27
2.1.4 Proof of Theorem 2.1 — 28
2.1.5 Proof of Theorem 2.2 — 31
2.2 Weak solutions to the Hele–Shaw problem — 42
2.2.1 The problem setting — 42
2.2.2 Proof of Theorem 2.5: existence — 45

3 A joint motion of two immiscible viscous fluids — 53
3.1 A single capillary in an absolutely rigid skeleton: Dirichlet boundary conditions — 53
3.1.1 The problem setting — 53
3.1.2 The main result — 54
3.1.3 Proof of the main result — 54
3.1.4 Smooth initial density: existence and uniqueness — 55
3.1.5 Passage to non-mooth initial data — 59
3.1.6 Existence of a regular free boundary — 60
3.1.7 Uniqueness of the solution — 62
3.2 A single capillary of an absolutely rigid skeleton: Neumann boundary conditions — 64
3.2.1 The problem setting — 64
3.2.2 Proof of the main result — 67
3.2.3 Smooth initial density — 68
3.2.4 $W^{1,1}$ bounds for density — 74
3.2.5 Passage to nonsmooth initial data, existence of a regular free boundary — 75
3.2.6 Existence of the maximal time interval and uniqueness of the solution — 77
3.3 A single capillary of an elastic skeleton: Neumann boundary conditions — 77
3.3.1 The main result — 80
3.3.2 Proof of the main result — 82

Bibliografische Informationen

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

3.3.3 Approximate smooth density — 83
3.3.4 Uniform bounds for the velocity and pressure of fluid — 89
3.3.5 Uniform bounds for density — 96
3.4 Generalized Muskat problem — 97
3.4.1 Statement of the problem and main results — 98
3.4.2 Proof of Theorem 3.4 — 101
3.4.3 Proof of Theorem 3.5 — 110
3.5 Numerical implementations for the Muskat problem — 110
3.5.1 Numerical implementations for the Muskat problem with Neumann boundary conditions for absolutly rigid skeletons with surface tension — 110
3.5.2 Numerical implementations for the Muskat problem with Neumann boundary conditions for an absolutely rigid skeleton without surface tension — 116
3.5.3 Numerical implementations for the Muskat problem with Neumann boundary conditions for an elastic skeleton without surface tension — 117
3.5.4 Equations for fluid–structure interaction — 124
3.5.5 Numerical implementations for the Muskat problem with Neumann boundary conditions for elastic skeleton with surface tension — 127

4 Mathematical models of in-situ leaching — 129
4.1 Microscopic description — 129
4.1.1 Mathematical model in the form of differential equations — 129
4.1.2 Numerical implementations — 133
4.2 Macroscopic description — 139
4.2.1 Mathematical model as a system of integral identities — 139
4.2.2 Homogenization — 142
4.2.3 Mathematical model in a form of differential equations — 143
4.2.4 Initial boundary-value problem, describing in-situ leaching at the macroscopic level — 149
4.2.5 Numerical implementations — 150

5 Dynamics of cracks in rocks — 155
5.1 Accumulation of the energy in a single crack: the microscopic (pore) level — 155
5.1.1 Mathematical model — 155
5.1.2 Basic a-priori estimates — 158
5.2 Accumulation of the energy in a single crack: the macroscopic description — 161
5.2.1 Basic axioms — 161

5.2.2 Homogenization — **161**
5.2.3 A joint motion of the elastic body and the liquid in crack — **163**
5.2.4 Accumulation of the energy in a single crack — **164**
5.3 Macroscopic model of crack propagation — **165**

A Elements of continuum mechanics — 167
A.1 Subject and method of continuum mechanics — **167**
A.2 Basic definitions and axioms — **170**
A.3 Continuous motion — **176**
A.4 Elements of thermodynamics — **180**
A.5 Some classical models of continuum mechanics — **181**
A.6 Shock relations — **186**
A.7 Joint motion of an elastic sold and a viscous liquid — **191**
