Preface	iii
Zusammenfassung in deutscher Sprache	xiii
1 Functional-analytic framework	1
1.1 A brief overview of interpolation theory	2
1.2 Function spaces	12
1.2.1 Function spaces on $\mathbb{R}^d$	20
1.2.2 Function spaces on a domain	25
1.2.3 Sobolev functions with partially vanishing trace . . .	31
1.2.4 Function spaces on (subsets of) the boundary	40
1.3 Geometry for the underlying spatial sets	52
1.4 Maximal parabolic regularity	67
1.5 The divergence-gradient operator	82
1.5.1 Maximal Sobolev regularity	91
1.6 Real spaces	101
2 Analysis of quasilinear parabolic equations	103
2.1 Uniform nonautonomous Hölder estimates	105
2.1.1 Classical results	113
2.1.2 Preliminaries	122
2.1.3 Localization, transformation, reflection	130
2.1.4 The core of the proof	142
2.1.5 Inhomogeneous Dirichlet boundary data	152

- 2.2 Quasilinear equations in divergence form 155
 - 2.2.1 Global solutions 164
- 3 Optimal control of quasilinear parabolic equations 177**
 - 3.1 Existence of optimal controls 186
 - 3.1.1 A compact embedding for the control space 189
 - 3.2 First order necessary optimality conditions 196
- 4 The thermistor problem 213**
 - 4.1 The state system 218
 - 4.1.1 Existence and uniqueness 222
 - 4.2 The optimal control problem 228
 - 4.2.1 Existence of globally optimal controls 235
 - 4.2.2 First order necessary optimality conditions 240
 - 4.3 Application and numerical example 249
- List of symbols 257**
- Bibliography 261**
