Preface — v

Part I: Quasi-statics of contact interaction

1	Optimal contact pressure and optimal punch shape — 3
1.1	Method of optimization — 3
1.2	Optimization of pressure — 6
1.3	Determination of the optimal punch shape — 10
1.4	Punch with rectangular contact region — 12
1.5	Conclusions — 16
2	Influence of forces applied outside contact region — 18
2.1	Basic relations — 18
2.2	Finding of optimal punch shape — 20
2.3	Some notes and conclusions — 27
3	Shape optimization of punch moving with friction — 29
3.1	Problem of optimization — 29
3.2	Optimization of pressure distribution — 31
3.3	Optimal shape of moving punch — 33
3.4	Some remarks — 38
4	Optimization in contact problems under incomplete data — 39
4.1	Optimization problem — 39
4.2	Resistance of elastic media — 42
4.3	Punch with circular basement — 43
4.4	Combined constraints — 49
5	Application of probabilistic data — 54
5.1	Optimization problems and probabilistic characteristics — 54
5.2	Application of Betti's Theorem — 56
5.3	Shape optimization of punch-shell — 60
5.4	Conclusions — 64
6	Minimization of material wear — 67
6.1	Basic relations — 67
6.2	Optimization problem — 69
6.3	Optimal punch shape — 71
6.4	Nonadditive efficiency functional — 74

- 7 Multiobjective optimization of contact pressure, wear of material, and energy dissipation — 76**
- 7.1 Optimization problem for moving punch — 76
- 7.2 Analysis of optimized functionals — 80
- 7.3 Finding of the punch shape by decomposed method — 84
- 7.4 Some notes — 86

Part II: High-speed penetration into deformable medium

- 8 Optimization of impactor shape — 89**
- 8.1 Penetration into solid medium — 89
- 8.2 Nonadditive criterion and algorithm of nonlocal shape optimization — 94
- 8.3 Results of computations of optimal truncated shapes — 98
- 8.4 Conclusions — 100

- 9 Strikers of nonaxisymmetric optimal shape — 101**
- 9.1 Resistance of deformable medium — 101
- 9.2 Penetration of pyramidal striker for maximal depth — 104
- 9.3 Striker of fixed length — 109
- 9.4 Striker of truncated pyramidal shape — 111

- 10 Multiobjective optimization of rigid shell — 114**
- 10.1 Multiobjective optimization and pareto optimality — 114
- 10.2 Optimality conditions — 117
- 10.3 Minimization of resistance force and mass of axisymmetric shell — 119
- 10.4 Some notes and conclusions — 122

- 11 Optimization of truncated rotating strikers — 124**
- 11.1 Basic relations — 124
- 11.2 External forces and equations of dynamics with rotation for truncated striker — 127
- 11.3 Perforation of slab — 129
- 11.4 Optimization of striker — 132
- 11.5 Some notes and conclusions — 134

- 12 Penetration into solid medium under strength constraints — 136**
- 12.1 Geometry and forces — 136
- 12.2 Membrane tensions and stresses — 138
- 12.3 Dynamical equations and dynamical analysis — 140

12.4	Examples of penetration of spherical and conical shells —	141
12.5	Some notes and conclusions —	144
13	Some problems of global multipurpose structural optimization —	145
13.1	Perforation of layered structure —	145
13.2	Problem of multipurpose optimization of protective layered structure —	148
13.3	Finding of optimal multicriteria structures with application of nonlocal search (genetic algorithm) —	150
13.4	Some notes and conclusions —	154
14	Analytical and numerical estimations of optimal parameters of layered slab —	155
14.1	Perforation of piecewise homogeneous layered plate (slab) —	155
14.2	Optimization of piecewise homogeneous layered slab —	157
14.3	Theoretical estimate of shape coefficient —	160
15	Striker shape optimization using condition of minimal ballistic limit velocity for layered slabs —	164
15.1	Formulation of problem —	164
15.2	Computational results —	166
15.3	Example of conical striker —	168

Part III: Appendices

Appendix A	Nonadditive functionals and extremum conditions —	173
Appendix B	Multivariant estimation of functionals and their sensitivity —	176
Appendix C	Basic ideas of multicriteria optimization —	179
Appendix D	Evolutionary algorithm of global optimization —	182

Bibliography —	185
-----------------------	------------

Index —	191
