

Contents

1	Introduction	1
2	Riemannian manifolds	9
2.1	Curvature on Riemannian manifolds	9
2.2	Geodesics	13
2.3	Integration and Laplace operators on vector bundles	15
2.4	Weitzenböck decomposition	19
2.5	The de Rham cohomology	21
3	Heat diffusion on manifolds	25
3.1	Lebesgue and Sobolev spaces	25
3.2	The Dirichlet-Laplacian and its spectrum	28
3.3	The heat equation	29
3.4	Kato-type perturbations of the heat semigroup . .	36
3.5	Semigroup domination for the Bochner Laplacian	40
4	Isoperimetry and Gaussian upper bounds	43
4.1	Isoperimetric constants	44
4.2	Isoperimetry implies Gaussian upper bounds . . .	51
4.3	Locally uniform Ricci curvature integral bounds .	57
5	Gradient estimates for the heat equation	71
5.1	From gradient estimates to Harnack and Gauss . .	72

5.2	Kato-type curvature conditions	77
6	Kato potentials and the first Betti number	87
6.1	Vanishing results for $b_1(M)$	87
6.2	L^p - L^∞ -smoothing for the Hodge-Laplacian and $b_1(M)$	96
	Bibliography	105
