Preface *xv*

1	Synthetic Methods Toward Single-Chain Polymer Nanoparticles	1
	<i>Ozcan Altintas, Tobias S. Fischer, and Christopher Barner-Kowollik</i>	
1.1	Introduction	1
1.2	Single-Chain Rings via Irreversible and Reversible Bonds	2
1.3	Single-Chain Nanoparticles via Irreversible Bonds	8
1.4	Single-Chain Nanoparticles via Supramolecular Chemistry	17
1.5	Single-Chain Nanoparticles Based on Dynamic Covalent Chemistry	32
1.6	Conclusions and Outlook	33
	Acknowledgments	34
	References	34
2	Computer Simulations of Single-Chain Nanoparticles	47
	<i>Angel J. Moreno and Federica Lo Verso</i>	
2.1	Computer Simulations in Soft Matter Science	47
2.2	Simulation of Single-Chain Nanoparticles: Antecedents	49
2.3	A Bead–Spring Model for Single-Chain Nanoparticles	50
2.4	Conventional Routes in Good Solvent: Sparse Single-Chain Nanoparticles	53
2.4.1	The Simple Case: SCNPs from Homofunctional Precursors	54
2.4.2	SCNPs Synthesis via Orthogonal and Multi-orthogonal Protocols	57
2.5	Routes to Globular Single-Chain Nanoparticles	61
2.5.1	Bonding Mediated by Long Linkers	63
2.5.2	Solvent-Assisted Routes	64
2.6	Sparse SCNPs: Analogies with Intrinsically Disordered Proteins	70
2.7	Globular SCNPs: A New Class of Soft Colloids	75
2.8	Conclusions and Outlook	79
2.8.1	SCNPs as Nanofillers in All-Polymer Nanocomposites	80
2.8.2	Nonlinear Rheology of SCNPs	81

2.8.3	SCNPs under Pulling Forces	81
	Acknowledgments	82
	References	82
3	Characterization of Single-Chain Polymer Nanoparticles: Analytical Techniques	91
	<i>Ashley M. Hanlon, Kyle J. Rodriguez, Ruiwen Chen, Elizabeth Bright, and Erik B. Berda</i>	
3.1	Introduction	91
3.2	Single-Chain Polymer Nanoparticle Characterization via Size Exclusion Chromatography (SEC)	92
3.2.1	Standard Calibration SEC	92
3.2.2	Measuring Single-Chain Polymer Nanoparticle Formation via SEC-MALS	98
3.2.3	Measuring Single-Chain Polymer Nanoparticle Formation via SEC and Viscometry	100
3.3	Spectroscopic Characterization of Single-Chain Polymer Nanoparticles	102
3.3.1	Single-Chain Polymer Nanoparticle Characterization via Standard 1D ¹ H NMR	103
3.3.2	Single-Chain Polymer Nanoparticle Characterization via Other Nuclei 1D NMR	103
3.3.3	Single-Chain Polymer Nanoparticle Structural and Conformational Characterization via NMR	104
3.3.4	Single-Chain Polymer Nanoparticle Characterization via IR, UV–vis, CD, and Fluorescence Spectroscopy	110
3.4	Characterization of Single-Chain Polymer Nanoparticle Morphology	112
3.4.1	Morphological Characterization via TEM	112
3.4.2	Morphological Characterization via AFM	114
3.4.3	Morphological Characterization via Scattering	120
3.5	Conclusions and Outlook	122
	References	123
4	Structure and Dynamics of Systems Based on Single-Chain Polymer Nano-Particles Investigated by Scattering Techniques	129
	<i>Arantxa Arbe and Juan Colmenero</i>	
4.1	Introduction	129
4.2	Scattering Experiments	130
4.3	Sources and Instrumentation	136
4.3.1	Sources	136
4.3.2	Diffraction	136
4.3.3	Quasielastic Neutron Scattering	138
4.4	Application of Scattering Techniques to Polymeric Systems	140
4.4.1	Polymer Melts	140

4.4.2	Polymer Solutions	146
4.5	SCNPs in Dilute Solution	148
4.5.1	How Globular Are SCNPs in Good Solvent?	149
4.5.2	Chain Dynamics	152
4.6	SCNPs in Bulk	158
4.7	All-Polymer Nano-Composites: SCNPs Dispersed in a Linear Polymer Matrix	159
4.7.1	Interpenetration of the Components	160
4.7.2	Dynamic Asymmetry	162
4.7.3	Selecting Component Contributions by Deuterium Labeling	163
4.7.4	Dynamics of SCNPs Observed by QENS	165
4.7.5	Linear Polymer Matrix Dynamics	165
4.8	SCNPs as Confining Medium of Linear Chains	172
4.9	Conclusions	173
	Acknowledgments	174
	References	174
5	Dynamically Folded Single-Chain Polymeric Nanoparticles	183
	<i>Yiliu Liu and Anja R.A. Palmans</i>	
5.1	Introduction	183
5.2	Single-Chain Polymeric Nanoparticles versus Conventional Nanoparticles	184
5.3	Preparation of Dynamically Folded Single-Chain Polymeric Nanoparticles	186
5.4	Characterization of Dynamically Folded Single-Chain Polymer Nanoparticles	200
5.5	Conclusions and Future Outlook	207
	References	209
6	Metal Containing Single-Chain Nanoparticles	217
	<i>Inbal Berkovich, Victoria Kobernik, Stefano Guidone and Norberto Gabriel Lemcoff</i>	
6.1	Introduction	217
6.2	Palladium	218
6.3	Iron	222
6.4	Copper	228
6.5	Other Metals	239
6.5.1	Rhodium, Iridium, and Nickel	239
6.5.2	Ruthenium	242
6.5.3	Zinc	246
6.5.4	Gold	247
6.5.5	Gadolinium	250
6.5.6	Gallium	251
6.6	Conclusions and Outlook	253
	References	253

7	Colloidal Unimolecular Polymer Particles: CUP	259
	<i>Michael R. Van De Mark, Ashish Zore, Peng Geng, and Fei Zheng</i>	
7.1	Introduction	259
7.2	Synthesis	260
7.2.1	Monomers and Ratio, Molecular Weight, Glass Transition, Cup Size, and Functionality	264
7.2.2	Reduction and CUP Formation	264
7.2.3	Collapse Point	265
7.2.4	CUP Size and Distribution Correlation to Molecular Weight	266
7.3	Theory of the Formation of CUP Particles	267
7.3.1	Entropy Effect/Soap Theory	267
7.3.2	Hydrophilic/Lipophilic Balance (HLB)	269
7.3.3	Flory–Huggins Theory	270
7.4	Conformation of the CUP Particles	271
7.5	Electrokinetic Behavior in CUPs	271
7.5.1	Zeta Potential, Debye–Hückel Parameter and Electrophoretic Mobility	272
7.5.2	Determining the Effective Nuclear Charge	272
7.5.2.1	Nernst–Einstein Model	272
7.5.2.2	Hessingers Model	273
7.5.2.3	Charge Renormalization	273
7.5.3	Electrokinetic Behavior in COO^- CUPs	273
7.6	Electroviscous Effect in CUPs	274
7.6.1	Electroviscous Effect: Theory	275
7.6.1.1	Primary Electroviscous Effect	275
7.6.1.2	Secondary Electroviscous Effect	276
7.6.1.3	Tertiary Electroviscous Effect	277
7.6.2	Intrinsic Viscosity Determination	277
7.6.3	Surface Water Determination	277
7.6.4	Electroviscous Effect in CUPs	278
7.6.4.1	Electroviscous Effect in COO^- CUPs	278
7.6.4.2	Electroviscous Effect in SO_3^- CUPs	278
7.6.4.3	Electroviscous Effect in QUAT CUPs	279
7.6.5	Effect of Salts on Rheology	279
7.7	Gel Point Behavior	280
7.7.1	Packing in CUPs	280
7.7.2	Gel Point Study	281
7.7.2.1	Determination of Gel Point	281
7.7.2.2	Viscosity Measurements	281
7.7.2.3	Maximum Packing Volume Fraction, Density, and Thickness of Surface Water	282
7.7.3	Comparison with Commercial Resins like Latex and Polyurethane Dispersions	284
7.8	Surface Tension Behavior	285
7.8.1	Equilibrium Surface Tension Behavior	286
7.8.1.1	Effect of Concentration on Equilibrium Surface Tension	286
7.8.1.2	Effect of Molecular Weight on Equilibrium Surface Tension	287

7.8.1.3	Effect of Surface Active Groups on Equilibrium Surface Tension	288
7.8.2	Dynamic Surface Tension Behavior	288
7.8.2.1	Effect of Molecular Weight on Kinetic Relaxation Time	289
7.8.2.2	Effect of Concentration on Kinetic Relaxation Time	290
7.8.2.3	Effect of Molecular Weight on Dynamic Surface Tension	290
7.8.2.4	Effect of Concentration on Dynamic Surface Tension	290
7.9	Cup Surface Water	291
7.9.1	Electroviscous Effect and Gel Point	291
7.9.2	Differential Scanning Calorimetry	291
7.9.3	NMR Relaxation Study	293
7.9.3.1	Proton NMR Spin–Lattice Relaxation Time Constant versus CUP Concentration	293
7.9.3.2	Proton NMR Spin–Lattice Relaxation Time Constant versus Temperature	294
7.9.3.3	Calculation of Bound Water Amount	295
7.10	Study of Core Environment of CUPs	297
7.10.1	F^{19} NMR T_2 Relaxation Experiment	297
7.11	Applications: Use of CUPs in Coatings	298
7.11.1	Acrylic CUP Coating Lacquers	298
7.11.2	Aziridine-Cured Acrylic CUPs Resin	299
7.11.3	Use of CUPs with Melamine Resin Cross-Linking	300
7.11.4	Use of Sulfonate CUPs as Catalyst for Melamine Cure Systems	301
7.11.5	Epoxy	302
7.11.6	Use of CUPs as Additive for Freeze–Thaw Stability and Wet Edge Retention	305
	References	306
8	Single-Chain Nanoparticles via Self-Folding Amphiphilic Copolymers in Water	313
	<i>Takaya Terashima and Mitsuo Sawamoto</i>	
8.1	Introduction	313
8.2	Single-Chain Folding Amphiphilic Random Copolymers	315
8.2.1	Hydrophobic Alkyl Pendants	316
8.2.2	Hydrophobic/Hydrogen-Bonding Pendants	321
8.2.3	Fluorous Perfluorinated Pendants	326
8.3	Precision Self-Assembly and Self-Sorting of Amphiphilic Random Copolymers	329
8.4	Single-Chain Crosslinked Star Polymers	332
8.5	Conclusions and Future Directions	335
	References	335
9	Applications of Single-Chain Polymer Nanoparticles	341
	<i>Jon Rubio-Cervilla and Edurne González and José A. Pomposo</i>	
9.1	Introduction	341
9.1.1	Single-Chain Soft Nano-Objects	341
9.1.2	Reversible versus Irreversible Single-Chain Polymer Nanoparticles	345

9.1.3	Main Applications of Single-Chain Polymer Nanoparticles	346
9.2	Nanomedicine	347
9.2.1	Controlled Drug Delivery Systems	349
9.2.1.1	Single-Chain Polymer Nanoparticles for Controlled Delivery of Chiral Amino Acid Derivatives	349
9.2.1.2	Single-Chain Polymer Nanoparticles for Controlled Delivery of Peptides	350
9.2.1.3	Single-Chain Polymer Nanoparticles for Controlled Delivery of Vitamins	351
9.2.1.4	Single-Chain Polymer Nanoparticles for Controlled Delivery of Drugs	353
9.2.2	Image Contrast Agents	355
9.2.2.1	Single-Chain Polymer Nanoparticles for Magnetic Resonance Imaging	355
9.2.2.2	Single-Chain Polymer Nanoparticles for Single Photon Emission Computerized Tomography	356
9.2.2.3	Single-Chain Polymer Nanoparticles for Fluorescence Imaging	356
9.3	Catalysis	360
9.3.1	Single-Chain Polymer Nanoparticles as Nanoreactors for the Synthesis of Chemical Compounds	361
9.3.2	Single-Chain Polymer Nanoparticles as Nanoreactors for the Synthesis of Polymers	365
9.3.2.1	Ring-Opening Polymerization	365
9.3.2.2	Controlled Radical Polymerization	366
9.3.3	Single-Chain Polymer Nanoparticles as Nanoreactors for the Synthesis of Nanomaterials	367
9.3.3.1	Gold Nanoparticles	367
9.3.3.2	Quantum Dots	367
9.3.3.3	Carbon Nanodots	368
9.4	Sensing	369
9.4.1	Single-Chain Polymer Nanoparticles as Sensors of Metal Ions	369
9.4.2	Single-Chain Polymer Nanoparticles as Sensors of Proteins	369
9.5	Other Uses	371
9.5.1	Porogens for Microelectronic Applications	371
9.5.2	Functional Nanoparticles for Bioscience	372
9.5.3	Reversible Hydrogels	373
9.5.4	Supramolecular Films	373
9.5.5	Rheology Modifiers	374
9.5.6	All-Polymer Nanocomposites	374
9.5.7	Surfactants	375
9.6	Conclusions and Outlook	376
	Acknowledgments	378
	References	378
