Preface	XVII
List of Contributors	XIX
Color Plate	XXVII (after page 379)

Part One Quasiparticle Dynamics 1

1	Nonlinear Terahertz Studies of Ultrafast Quasiparticle Dynamics in Semiconductors	3
	<i>Michael Woerner and Thomas Elsaesser</i>	
1.1	Linear Optical Properties of Quasiparticles: The Polarization Cloud around a Charge Carrier	4
1.1.1	Theoretical Models Describing Static and Dynamic Properties of Polarons	5
1.1.2	Experimental Signatures of Linear and Quasistationary Polaron Properties	8
1.1.2.1	The Fröhlich Polaron at Rest	8
1.1.2.2	Frequency-Dependent Mobility of the Fröhlich Polaron	9
1.1.2.3	Quasistationary High-Field Transport of Polarons	11
1.2	Femtosecond Nonlinear Terahertz and Mid-Infrared Spectroscopy	13
1.2.1	Generation of High-Field Terahertz Transients	13
1.2.2	Electric Field-Resolved THz Pump–Mid-Infrared Probe Experiments	15
1.2.3	Nonlinear Terahertz Transmission Experiments	17
1.3	Ultrafast Quantum Kinetics of Polarons in Bulk GaAs	20
1.3.1	Experimental Results	20
1.3.2	Discussion	22
1.4	Coherent High-Field Transport in GaAs on Femtosecond Timescales	23
1.4.1	Experimental Results	24
1.4.2	Discussion	26
1.5	Conclusions and Outlook	28
	References	28

Dynamics at Solid State Surface and Interfaces Vol.1: Current Developments
 Edited by Uwe Bovensiepen, Hrvoje Petek, and Martin Wolf
 Copyright © 2010 WILEY-VCH Verlag GmbH & Co. KGaA, Weinheim
 ISBN: 978-3-527-40937-2

2	Higher Order Photoemission from Metal Surfaces	33
	<i>Aimo Winkelmann, Cheng-Tien Chiang, Francesco Bisio, Wen-Chin Lin, Jürgen Kirschner, and Hrvoje Petek</i>	
2.1	Introduction	33
2.2	Observation of Higher Order Photoemission at Cu Surfaces	34
2.2.1	Resonant 3PPE in the Cu(001) Electronic Band Structure	36
2.3	Electronic Structure Mapping Using Coherent Multiphoton Resonances	39
2.4	Dynamical Trapping of Electrons in Quasibound States	44
2.5	Above-Threshold Photoemission	46
2.6	Spin-Polarized Multiphoton Photoemission	47
2.7	Summary and Outlook	48
	References	49
3	Electron Dynamics in Image Potential States at Metal Surfaces	53
	<i>Thomas Fauster</i>	
3.1	Scattering Processes	53
3.2	Energies and Dispersion of Image Potential States	55
3.3	Inelastic Scattering	57
3.3.1	Lifetimes of Image Potential States	57
3.3.2	Momentum Dependence of Lifetimes	60
3.3.3	Inelastic Intraband Scattering	61
3.3.4	Inelastic Interband Scattering	62
3.4	Quasielastic Scattering	63
3.4.1	Elastic Interband Scattering	63
3.4.2	Resonant Interband Scattering	64
3.4.3	Elastic Intraband Scattering	66
3.5	Electron–Phonon Scattering	67
3.6	Electron Defect Scattering	69
3.6.1	Scattering by Adatoms	69
3.6.2	Scattering by Steps	71
3.7	Summary and Outlook	72
	References	72
4	Relaxation Dynamics in Image Potential States at Solid Interfaces	75
	<i>James E. Johns, Eric Muller, Matthew L. Strader, Sean Garrett-Roe, and Charles B. Harris</i>	
4.1	Stochastic Interpretation of IPS Decay	80
4.2	IPS Decay for Solvating Molecules	87
4.3	Conclusions	94
	References	95
5	Dynamics of Electronic States at Metal/Insulator Interfaces	99
	<i>Jens Güdde and Ulrich Höfer</i>	
5.1	Introduction	99
5.2	Spectroscopy by One-Photon Photoemission	101

5.3	Observation by Two-Photon Photoemission	104
5.4	Lifetimes	106
5.5	Momentum-Resolved Dynamics	108
5.6	Summary	111
	References	111
6	Spin-Dependent Relaxation of Photoexcited Electrons at Surfaces of 3d Ferromagnets	115
	<i>Martin Weinelt, Anke B. Schmidt, Martin Pickel, and Markus Donath</i>	
6.1	Introduction	115
6.2	Spin-Resolved Two-Photon Photoemission on Image Potential States	116
6.2.1	Image Potential States at a Ferromagnetic Surface	116
6.2.2	Spin-Resolved Two-Photon Photoemission	117
6.2.3	Key Aspects of the Experiment	122
6.3	Spin-Dependent Dynamics	124
6.3.1	Spin-Dependent Population Decay of Bulk Electrons	124
6.3.2	Spin-Dependent Lifetimes of Image Potential States	127
6.3.3	Quasielastic Scattering: Spin-Dependent Dephasing	128
6.3.4	Inelastic Intraband Scattering: Magnon Emission	131
6.4	Image Potential States: A Sensor for Surface Magnetization	133
6.4.1	Projecting the Spin Polarization of Bulk and Surface States	133
6.4.2	Access to Spin–Orbit Coupling via Dichroism	135
6.5	Summary	139
	References	140
7	Electron–Phonon Interaction at Interfaces	145
	<i>Philipp Hofmann, Evgueni V. Chulkov, and Irina Yu. Sklyadneva</i>	
7.1	Introduction	145
7.2	Calculation of the Electron–Phonon Coupling Strength	147
7.3	Experimental Determination of the Electron–Phonon Coupling Strength	152
7.4	Some Examples	157
7.4.1	The (111) Surface of the Noble Metals	158
7.4.2	Be(0001)	159
7.4.3	Mg(0001) and Al(001)	160
7.5	Conclusions	161
	References	161
Part Two	Collective Excitations	167
8	Low-Energy Collective Electronic Excitations at Metal Surfaces	169
	<i>Vyacheslav M. Silkin, Evgueni V. Chulkov, and Pedro M. Echenique</i>	
8.1	Introduction	169
8.2	Analytical and Numerical Calculations	170
8.2.1	Some Analytical Results	170

8.2.2	Self-Consistent Dielectric Response	172
8.3	Results of Numerical Calculations	175
8.3.1	Monolayers	175
8.3.2	Metal Surfaces	177
8.3.2.1	1D Calculations	177
8.3.3	3D Calculations	180
8.3.4	Dynamical Charge Density Oscillations	182
8.3.5	Acoustic Surface Plasmon Interaction with Light	184
8.4	Concluding Remarks	186
	References	186
9	Low-Dimensional Plasmons in Atom Sheets and Atom Chains	189
	<i>Tadaaki Nagao</i>	
9.1	Introduction	189
9.2	Difference between the Surface Plasmons and the Atomic Scale Plasmons	190
9.3	Measurement of Atomic Scale Low-Dimensional Metallic Objects	191
9.4	Plasmons Confined in Ag Nanolayers	193
9.5	Plasmon in a Two-Dimensional Monoatomic Ag Layer	197
9.6	Plasmons in Atomic Scale Quantum Wires	202
9.6.1	Plasmons in Self-Assembled Au Atom Chains	203
9.6.2	Plasmons in In-Induced Atom Chains	207
9.7	Conclusions	210
	References	210
10	Excitation and Time-Evolution of Coherent Optical Phonons	213
	<i>Muneaki Hase, Oleg V. Misochko, and Kunie Ishioka</i>	
10.1	Coherent Phonons in Group V Semimetals	213
10.1.1	Generation and Relaxation of Different Symmetry Phonons	214
10.1.2	Coherent Phonons in Extreme Nonequilibrium Conditions	216
10.1.3	Time-Resolved X-Ray Detection	218
10.1.4	Optical Coherent Control	220
10.2	Ultrafast Electron–Phonon Coupling in Graphitic Materials	221
10.3	Quasiparticle Dynamics in Silicon	226
10.4	Coherent Optical Phonons in Metals	227
10.5	Coherent Phonon-Polaritons in Ferroelectrics	229
10.6	Current Developments in Other Materials	231
10.7	Concluding Remarks	232
	References	233
11	Photoinduced Coherent Nuclear Motion at Surfaces: Alkali Overlayers on Metals	239
	<i>Yoshiyasu Matsumoto and Kazuya Watanabe</i>	
11.1	Introduction	239

11.2	Impulsive Excitation	240
11.3	Alkali Metal Overlayers	242
11.3.1	Adsorbate Structures	242
11.3.2	Surface Phonon Bands	243
11.3.3	Electronic Structures	245
11.4	Time-Resolved SHG Spectroscopy	247
11.4.1	Enhancement of SHG Intensity by Alkali Adsorption	247
11.4.2	The Principle of TRSHG Spectroscopy	249
11.5	Electronic and Nuclear Responses in TRSHG Signals	250
11.5.1	Representative TRSHG Traces	250
11.5.2	Electronic Response	251
11.5.3	Nuclear Response	252
11.5.4	Initial Phase	255
11.6	Excitation Mechanism	256
11.7	Summary and Outlook	260
	References	260

12 Coherent Excitations at Ferromagnetic Gd(0001) and Tb(0001) Surfaces 263

Alexey Melnikov and Uwe Bovensiepen

12.1	Introduction	263
12.2	Relaxation of the Optically Excited State	264
12.3	Coupled Lattice and Spin Excitations	267
12.3.1	Transient Binding Energy Variations of the Surface State	267
12.3.2	Nonlinear Optics as a Simultaneous Probe of Lattice Vibrations and Magnetic Excitations	268
12.3.2.1	Magneto-Induced SHG: Experimental Scheme and Data Analysis	269
12.3.2.2	Magneto-Induced SHG: Coherent Surface Dynamics	272
12.3.2.3	The Mechanism of Coherent Phonon Excitation	274
12.3.2.4	Damping of the Coherent Phonons	278
12.3.2.5	Future Developments	279
12.4	Conclusion	280
	References	281

Part Three Heterogeneous Electron Transfer 283

13 Studies on Auger Neutralization of He⁺ Ions in Front of Metal Surfaces 285

Stephan Wettkam and Helmut Winkler

13.1	Introduction	285
13.2	Concept of Method	286
13.2.1	Trajectories and Time Regime	288
13.3	Studies on Auger Neutralization of He ⁺ Ions	291
13.3.1	Studies on Auger Neutralization Making use of Isotope Effect	298

13.3.2	Face Dependence of Auger Neutralization	300
13.3.3	Effect of Magnetization of Target Surface on Auger Neutralization	301
13.4	Summary and Conclusions	303
	References	303
14	Electron Transfer Investigated by X-Ray Spectroscopy	305
	<i>Wilfried Wurth and Alexander Föhlisch</i>	
14.1	Core Hole Clock Spectroscopy	305
14.1.1	Basics	306
14.1.2	Electron Stabilization	309
14.1.3	Attosecond Charge Transfer and the Effect of Orbital Polarization	311
14.1.4	Clocks with Different Timing	314
14.2	Time-Resolved Soft X-Ray Spectroscopy	315
14.2.1	Laser-Assisted Photoemission	318
14.2.2	Surface Carrier Dynamics	319
14.3	Summary	320
	References	322
15	Exciton Formation and Decay at Surfaces and Interfaces	325
	<i>Matthias Muntwiler and Xiaoyang Zhu</i>	
15.1	Introduction	325
15.1.1	Exciton Flavors	326
15.1.2	Photophysics of Organic Semiconductors	326
15.2	Exciton Models	328
15.2.1	Dielectric Models	329
15.2.1.1	Mott–Wannier Exciton	330
15.2.1.2	Charge Transfer Exciton at Dielectric Interfaces	330
15.2.2	Merrifield Model of Frenkel and Charge Transfer Excitons	334
15.2.2.1	Frenkel Exciton	335
15.2.2.2	Charge Transfer Exciton	337
15.2.2.3	Finite Size Effect	338
15.3	Photoelectron Spectroscopy of Excitons	338
15.3.1	Energy Levels	339
15.4	Frenkel Excitons in C ₆₀	341
15.4.1	Structural Overview	341
15.4.2	Energy Levels	342
15.4.3	Exciton Dynamics	346
15.4.3.1	Coverage Dependence: Distance-Dependent Quenching	346
15.5	Charge Transfer Excitons at the Surface of Pentacene	349
15.5.1	System Overview	349
15.5.2	Energy Levels	350
15.5.3	Dynamics	353
15.6	Conclusions	354
	References	356

16	Electron Dynamics at Polar Molecule–Metal Interfaces: Competition between Localization, Solvation, and Transfer	359
	<i>Julia Stähler, Uwe Bovensiepen, and Martin Wolf</i>	
16.1	Introduction	359
16.2	Competing Channels of Electron Relaxation in Amorphous Layers	361
16.2.1	Amorphous Ice on Metal Surfaces	363
16.2.2	Amorphous NH ₃ on Cu(111)	369
16.3	Ultrafast Trapping and Ultraslow Stabilization of Electrons in Crystalline Solvents	372
16.3.1	Crystalline Ice on Ru(001)	372
16.3.2	Reactivity of Trapped Electrons on Ice	376
16.4	Conclusion	377
	References	378
Part Four	Photoinduced Modification of Materials and Femtochemistry	381
17	Theory of Femtochemistry at Metal Surfaces: Associative Molecular Photodesorption as a Case Study	383
	<i>Peter Saalfrank, Tillmann Klamroth, Tijo Vazhappilly, and Rigoberto Hernandez</i>	
17.1	Introduction	383
17.2	Theory of Femtochemistry at Surfaces	385
17.2.1	Weakly Nonadiabatic Models	385
17.2.1.1	Two- and Three-Temperature Models	385
17.2.1.2	One-Dimensional Classical, Arrhenius-Type Models	387
17.2.1.3	Langevin Dynamics with Electronic Friction	388
17.2.1.4	Quantum Treatment with Master Equations	389
17.2.2	Strongly Nonadiabatic Dynamics	390
17.2.2.1	Multistate Time-Dependent Schrödinger Equation	390
17.2.2.2	Open-System Density Matrix Theory	390
17.2.2.3	Stochastic Wave Packet Approaches	393
17.2.2.4	Quantum–Classical Hopping Schemes	394
17.3	Femtosecond-Laser Driven Desorption of H ₂ and D ₂ from Ru(0001)	395
17.3.1	Experimental Facts	395
17.3.2	Potentials, Electronic Lifetime, and Friction	395
17.3.2.1	The Ground-State Potential and Vibrational Levels	395
17.3.2.2	The Excited-State Potential and Electronic Lifetime	396
17.3.2.3	Frictional Surfaces and Vibrational Relaxation	397
17.3.3	DIMET at a Single Laser Fluence	399
17.3.3.1	Langevin Dynamics Approach	399
17.3.3.2	Stochastic Wave Packet Approach	401
17.3.4	Scaling of DIMET with Laser Fluence	402
17.4	Conclusions	404
	References	405

18	Time-Resolved Investigation of Electronically Induced Diffusion Processes	409
	<i>Jens Gdde, Mischa Bonn, Hiromu Ueba, and Ulrich Hfer</i>	
18.1	Introduction	409
18.2	Detection of Electronically Induced Diffusion	410
18.2.1	Time-Resolved Techniques	411
18.2.2	Second Harmonic Generation	412
18.2.3	Time-Resolved Sum-Frequency Generation	414
