

Table of contents

Introduction to Thermoprocessing	1
1. Modes of Heat and Mass Transfer	7
1.1 Mechanism	8
1.2 Constitutive Laws for Conduction and Diffusion	8
1.3 Heat Transfer between Wall and Fluid	11
1.4 Heat Transfer through Radiation	17
1.5 Significance	20
2. Steady Heat Conduction	21
2.1 Heat Conduction through Single-Layer Walls	22
2.2 Heat Transfer through Single-Layer Walls	25
2.3 Heat Transfer through Multi-Layer Walls	26
2.4 Thermal Resistances	28
2.5 Temperature Depending Thermal Conductivity	37
2.6 Heat Conduction in Fins	40
2.7 Effect of Heat Insulation	49
2.8 Conduction with Equally Distributed Heat Sources	54
2.9 Thermal Contact Resistance between Planar Walls	56
3. Convective Heat Transfer	59
3.1 Boundary Layer Equations	60
3.2 Forced Flow over a Body	62
3.2.1 Frictionless Flow along a Plate	62
3.2.2 The Boundary Layer of an Overflowing Plate	66
3.2.3 Nusselt Functions	70
3.3 Forced Flow in Tubes and Ducts	78
3.3.1 Definition of the Heat Transfer Coefficient	78
3.3.2 Nusselt Functions	80
3.4 Nozzle Arrays	86
3.4.1 Single Airjet	86
3.4.2 Single Water Jet	89
3.4.3 Arrays of Single Nozzles for Planar Walls	90
3.4.4 Hole Channels with Planar Plates	94
3.4.5 Perforated Plate over a Planar Wall	95
3.4.6 Jets on Cylindrical Bodies	96
3.4.7 Summary of Nusselt Functions	98

3.5 Tube Banks 102

3.6 Free Convection 108

3.6.1 Boundary Layer Equations 108

3.6.2 Nusselt Functions 111

3.6.3 Superposition of Free and Forced Convection 112

4. Vaporization and Condensation 117

4.1 Vaporization 118

4.1.1 Mechanism 118

4.1.2 Nusselt Functions 121

4.1.3 Evaporator Stability 121

4.2 Condensation 124

4.2.1 Dropwise Condensation 124

4.2.2 Film Condensation 125

5. Heat Exchangers 131

5.1 Constant Heat Flux 132

5.2 Constant Wall Temperature 133

5.3 Heat Transfer from Fluid to Fluid 134

5.3.1 Temperature Profiles 134

5.3.2 Equal Capacity Flows (Counter-Flow) 137

5.3.3 Unequal Capacity Flows 138

5.4 Design of Heat Exchangers 139

6. Steady Mass Transfer 147

6.1 Diffusion Modes 148

6.1.1 Definition of the Concentrations 148

6.1.2 Ordinary (Molar) Diffusion 150

6.1.3 Pore Diffusion 154

6.1.4 Diffusivities 157

6.2 Mass Transfer 159

6.2.1 Analogous Mechanism 159

6.2.2 Influence of the Stefan's Flow 161

6.3 Steady Diffusion in Walls 164

6.3.1 Single Layer Wall 164

6.3.2 Overall Mass Transfer 166

6.4 Steady Diffusion with Mass Sources 173

6.5 Mass Transfer between two Phases 179

6.6 Evaporation of Liquids 183

6.6.1 Mathematical Description 183

6.6.2	Representation using Resistances	185
6.6.3	Evaporation of Droplets	186
6.7	Decomposition of Limestone (Topochemical Reaction).	193
6.7.1	Mechanism	193
6.7.2	Mathematical Modelling	196
6.7.3	Simplified Solution	198
7.	Quenching of Hot Metals with Liquids	203
7.1	Phenomenology	204
7.1.1	Quenching Techniques	204
7.1.2	Heat Transfer Mechanism.	205
7.1.3	Reduction of Distortion.	208
7.2	Immersion Quenching	210
7.2.1	Phenomenology of the Heat Transfer.	210
7.2.2	Heat Transfer during Film Boiling	211
7.2.3	Vapor Film Thickness	217

7.2.4	Effect of Influencing Variables	218
7.2.5	Technical Influence	220
7.3	Spray Quenching	221
7.3.1	Nozzle Characteristics	221
7.3.2	Heat Transfer Mechanism	226
7.3.3	Film Boiling	228
7.3.4	Leidenfrost Temperature	232
7.3.5	Nucleate Boiling	233
7.3.6	Influence of Water Temperature	234
7.4	Full Jet Quenching	234
7.4.1	Nozzle Jets	234
7.4.2	Mold Jets	238
7.5	Quality of Water	239
8.	Radiation	241
8.1	Intensity	242
8.2	Radiation Properties	244
8.2.1	Material Behavior	244
8.2.2	Emission of Solids	246
8.2.3	Absorption Mechanism in Transparent Bodies	249
8.2.4	Equivalent Thickness of Transparent Bodies	250
8.2.5	Emission of Liquids	251
8.2.6	Emissivity of Gases	252
8.2.7	Emission of Soot and Dust	256
8.2.8	Apparent Emissivity of Rough Surfaces	258
8.3	View Factors	261
8.4	Radiation Exchange	273
8.4.1	Method of Calculation	273
8.4.2	Radiation Exchange between two Walls	277
8.4.3	Radiation Shields	279
8.4.4	Radiation Exchange between three Walls	282
8.4.5	Radiation Exchange between two Walls with an Absorbing Gas	285
8.4.6	Radiation Exchange between three Walls and an Absorbing Gas	287
8.4.7	Radiation Exchange between a Gas and a surrounding Wall	288
8.4.8	Radiation Exchange between a Gas and a Solid with adiabatic Walls	289
8.4.9	Heating with Radiant Tubes	291
8.4.10	Radiation into Space	293
8.5	Superposition of Radiation and Convection	305
8.5.1	Radiative Heat Transfer Coefficient	305
8.5.2	Measuring Gas Temperature	306
8.5.3	Convective Heat Transfer with Secondary Radiation in Slots	307

8.6 Greenhouse Effect 309

8.6.1 Glass House 309

8.6.2 The Greenhouse Effect in Atmosphere 312

9. Unsteady Heat Conduction 317

9.1 Thermally Thin Bodies 318

9.1.1 Lumped Thermal Capacity Model 318

9.1.2 Constant Ambient Temperature 319

9.1.3 Linear Increase of Ambient Temperature 322

9.1.4 Ambient Temperature Oscillation 324

9.1.5 Heat Sources within a Body. 327

9.2 Thermally Thick Bodies 332

9.2.1 Derivation of the Fourier Differential Equation 332

9.2.2 Dimensionless Modeling 335

9.2.3 Solution for a Constant Ambient Temperature. 337

9.2.4 Solution for Constant Surface Temperature. 340

9.2.5 Approximate Solution for Constant Ambient Temperature 341

9.2.6 Approximate Solution for Heat Transfer through Radiation 345

9.2.7 Linear Increase in Ambient Temperature 346

9.2.8 Approximate Solution for the Mean Temperature 347

9.2.9 Multidimensional Conduction. 348

9.2.10 Temperature Compensation in Adiabatic Bodies. 350

9.3 Unsteady Heat Conduction in Semi-Infinite Bodies 359

9.3.1 Temperature Profile. 359

9.3.2 Constant Surface Temperature. 360

9.3.3 Contact Temperature 361

9.3.4 Constant Ambient Temperature 362

9.3.5 Constant Heat Flux. 363

9.4 Conductive Heating 368

9.5 Advection (Moving Slabs). 370

9.5.1 Thermally Thick Bodies 370

9.5.1.1 Thermally Thin Bodies 371

10. Unsteady Diffusion 375

10.1 Fick’s Differential Equation 376

10.2 Caburization of Steel 378

11. Melting and Solidification. 383

11.1 Melting 384

11.1.1 Basic Equations for Melting 384

11.2	Diffusion Melting	390
11.2.1	Qualitative Description	390
11.2.2	Mathematical Description	391
11.2.3	Approximate Solution	393
11.3	Mechanism of Solidification Processes	394
11.4	Solidification for Thermally Thin Walls	395
11.4.1	Fundamental Equations	395
11.4.2	Analytical Solution for quasi-steady Temperature Profiles	399
11.4.3	Analytical Solution at Constant Surface Temperature	403
11.4.4	Approximate Solution at Constant Heat Transfer	405
11.4.5	Influence of the Liquid Superheat	406
11.4.6	Solidification Length in Continuous Casting	411
11.4.7	Solidification Process in the Mold	415
11.5	Solidification of Thermally Thick Walls	418
11.5.1	Fundamental Equations	418
11.5.2	Solution with Quasi-Steady Temperature Profiles	421
11.6	Solidification for Semi-Infinite Thick Walls (Block Casting)	425
12. Rotary Kilns		429
12.1	Types and Processes	430
12.2	Transversal Bulk Material Movement	433
12.2.1	Modes of Motion	433
12.2.2	Angle of Repose	436
12.2.3	Rolling Motion	437
12.3	Axial Transport	438
12.3.1	Bed Depth Profile	438
12.3.2	Mean Residence Time	439
12.4	Contact Heat Transfer	439
12.5	Convective Heat Transfer	441
12.6	Heat Transfer by Radiation	443
12.7	Regenerative Heat Transfer of the Wall	445
12.8	Heat Loss through the Wall	447
12.9	Process Modeling	449
13. Shaft Kilns and Cupola Furnaces		451
13.1	Process and Design	452
13.2	Convective Heat and Mass Transfer	455
13.3	Heat Transfer through Gas Radiation	458
13.4	Radiative Heat Conductivity	461
13.5	Pressure Drop	462
13.6	Void Fraction	462

13.7	Process Modeling	465
13.7.1	Fundamental Equations	465
13.7.2	Transient Heat Transfer Coefficient	466
13.7.3	The Temperature Difference in a Particle	466
14.	Tunnel Kilns	469
14.1	Types and Processes	470
14.2	Convection	473
14.2.1	Characteristic Features	473
14.2.2	Heat Transfer for Plates	475
14.2.3	Heat Transfer in Compact Bricks	477
14.2.4	Heat Transfer in Perforated Bricks	478
14.3	Radiation.	478
14.4	Process Modeling.	479

15. Roller Hearth Furnace 481

15.1 Design and Processes 482

15.2 Heat Transfer through Radiation 485

15.2.1 Gas Radiation 485

15.2.2 Tertiary Heating Plates 486

15.3 Heat Transfer through the Rollers 488

15.3.1 Contact Heat Transfer 488

15.3.2 Regenerative Transport 492

15.3.3 Approximation of the Heat Transfer 498

15.3.4 Influence of the Rollers. 498

15.4 Process Model 499

Nomenclature 501

Latin symbols 502

Greek Symbols 503

Subscripts 504

Appendix 507

A Temperature-dependent thermophysical material properties
(Density, Specific heat capacity, Thermal conductivity, Emissivity,
Diffusion coefficient, Viscosity). 508

A1 Gases 508

A2 Liquids 510

A3 Solids at specific temperatures 513

A4 Steels 520

A5 Powder metallurgical steels 528

A6 Non-ferrous metals. 533

A7 Non-metallic inorganic materials 543

A7.1 Refractory materials 543

A7.2 Thermal insulation materials (Wools, Felt, etc.) 560

A7.3 Miscellaneous materials 571

B Units 575

B1 Multiple and parts of units 575

B2 Correlation between units 575

B3 Conversion of units. 575

C Similarity numbers 576
