Foreword — V

Acknowledgement — IX

1	Complexity — 1
1.1	Some perspective — 2
1.2	It started with physics! — 4
1.3	Complexity and mathematics — 6
1.3.1	Machine age — 9
1.3.2	Information age — 11
1.3.3	Information force — 15
1.4	Measures of size — 16
1.4.1	Physical — 18
1.4.2	Fractals — 20
1.4.3	Fractal advantage — 25
1.5	Allometry heuristics — 27
1.5.1	Allometry/information hypothesis — 28
1.5.2	Size variability — 29
1.5.3	On AR models — 31
1.6	Overview — 32
2	Empirical allometry — 35
2.1	Living networks — 37
2.1.1	Biology — 37
2.1.2	Physiology — 39
2.1.3	Time in living networks — 41
2.1.4	Clearance curves — 44
2.1.5	Botany — 45
2.1.6	Information transfer and Rent's Rule — 46
2.2	Physical networks — 48
2.2.1	Geology and geomorphology — 48
2.2.2	Hydrology — 50
2.3	Natural History — 52
2.3.1	Wing spans — 52
2.3.2	Ecology — 53
2.3.3	Zoology and acoustics — 54
2.3.4	Paleontology — 55
2.4	Sociology — 56
2.4.1	Effect of crowding — 56

2.4.2	Urban allometry —	57
2.5	Summary —	60
3	Statistics, scaling and simulation —	61
3.1	Interpreting fluctuations —	62
3.2	Phenomenological distributions —	64
3.2.1	Allometry coefficient fluctuations —	64
3.2.2	Allometry exponent fluctuations —	67
3.2.3	Other scaling statistics —	69
3.2.4	Taylor's Law —	70
3.2.5	Paleobiology and scaling —	73
3.2.6	Urban variability —	74
3.3	Are ARs universal? —	75
3.3.1	Covariation of allometry parameters —	76
3.3.2	The principle of empirical consistency —	77
3.4	Summary —	80
4	Allometry theories —	83
4.1	Optimization principles —	84
4.1.1	Energy minimization —	84
4.1.2	Optimal design —	85
4.1.3	Why fractals? —	88
4.2	Scaling and allometry —	89
4.2.1	Elastic similarity model —	89
4.2.2	WBE model —	91
4.2.3	The optimum can be dangerous —	95
4.3	Stochastic differential equations —	96
4.3.1	Stochastic dynamics —	96
4.3.2	Ontogenetic growth model —	99
4.3.3	Growth of cities —	102
4.3.4	Stochastic ontogenetic growth model —	104
4.4	Fokker–Planck equations —	105
4.4.1	Phase space distribution —	105
4.4.2	Solution to FPE —	107
4.4.3	Fit solution to data —	109
4.4.4	Interspecies empirical AR —	110
4.5	Summary —	112
5	Strange kinetics —	113
5.1	Fractional thinking —	115
5.1.1	Dynamic fractals —	117
5.1.2	Simple fractional operators —	121

5.2	Fractional rate equations —	125
5.2.1	Another source of fractional derivatives —	129
5.2.2	Network survival —	132
5.2.3	Network control —	136
5.3	Fractional Poisson process —	137
5.3.1	Poisson process dynamics —	138
5.3.2	Fractional Poisson dynamics —	140
5.4	A closer look at complexity —	143
5.4.1	Entropies —	146
5.4.2	Information, incompleteness and uncomputability —	147
5.5	Recapitulation —	149
5.6	Appendix —	151

6	Fractional probability calculus —	153
6.1	Fractional Fokker–Planck equation —	154
6.2	Fractional kinetic equations —	156
6.2.1	Time-dependent Lévy process —	158
6.3	Allometry scaling solution —	160
6.3.1	What about allometry relations? —	163
6.4	Entropy entails allometry —	165
6.4.1	Entropy and intraspecies allometry —	166
6.5	Discussion and conclusions —	168

Epilogue —	171
