

Contents

1	Introduction	1
1.1	Selection of Data	1
1.2	Definitions and Units	3
1.2.1	Diffusion Coefficients	3
1.2.2	Temperature, Pressure and Density, Concentration	6
1.3	Arrangement of Data	6
1.4	Substances and Nomenclature	7
1.5	Data Reduction and Correlations	7
	References	8
2	Measurement Methods	9
2.1	NMR Methods	10
2.1.1	Spin Echo Methods	10
2.1.2	Diffusion Ordered Spectroscopy (DOSY)	11
2.1.3	Field Cycling NMR Relaxometry	12
2.2	Optical Methods	12
2.2.1	Interferometry	12
2.2.2	Holographic Interferometry	12
2.2.3	Position Scanning – and 1D-Raman – Spectroscopy	13
2.3	Scattering Methods	13
2.3.1	Dynamic Light Scattering	13
2.3.2	Quasi-Elastic Neutron Scattering	14
2.4	Chromatographic Methods	14
2.4.1	Gas Chromatography	15
2.4.2	Taylor Dispersion Method	15
2.4.3	Chromatographic Impulse Response Method (CIR)	16
2.4.4	Arrested Flow, Peak Parking and Reversed Flow Methods	16
2.5	Steady State Diffusion	16
2.6	Restricted Diffusion in Capillary Systems	17
2.6.1	Closed Tube (Loschmidt Cell)	17
2.6.2	Open Ended Capillary	17
2.6.3	Capillary Reservoir Technique	18
2.6.4	Harned Conductance Method	18
2.6.5	Decaying Pulse Technique	18
2.7	Thermodiffusion Methods	19
2.7.1	Thermal Diffusion Forced Rayleigh Scattering	19
2.7.2	Thermogravimetical Column	19
2.7.3	Transient Grating Technique	19
2.8	Recommended Data Sets for Calibration	20
	References	21
3	Diffusion in Pure Liquids	23
3.1	Data	23
	References	267
4	Diffusion of Solute in Liquid Solvent	273
4.1	Data	273
	References	405
5	Diffusion of Solute into Solution	409
5.1	Data	409
	References	484
