

INDEX

CHASSIS.TECH PLUS SECTION

KEYNOTE LECTURES I

- The chassis as game changer for automated and electrified driving** 5
Prof. Dr. Stefan Gies, Dr. L. Liesner, Volkswagen AG
- The chassis of the all-new AUDI A8** 7
Carsten Jablonowski, Dr. C. Schimmel, V. Underberg, AUDI AG
- Future brake system architectures for automated driving** 27
Dr. Armin Kunz, Dr. E. Liebermann, Dr. M. Kunz, Dr. S. Strengert, Robert Bosch GmbH

KEYNOTE LECTURES II

- Automotive security is not even a feature – how can we afford that?** 31
Dr. Sebastian Labitzke, ITK Engineering GmbH
- Acceptance and market for ADAS and automated driving systems** 45
Dr. Wolfgang Bernhart, M. Yoon, Roland Berger GmbH

KEYNOTE LECTURES III

- Modularization of vehicle control systems based on the application of object-oriented design principles** 49
Dr. Veit Held, Dr. A. Heitmann, Adam Opel GmbH
- Tires and system solutions for the cars of the future** 67
Prof. Dr. Burkhard Wies, Dr. H. Lange, Dr. T. Yilkiran, Continental Reifen Deutschland GmbH

PARALLEL STRAND I

NEW CHASSIS

- Business athlete –
exciting driving dynamics for the all-new BMW 5 series** 83
Christof Lischka, BMW Group
- A compact rear chassis for the 2018 Honda Odyssey –
merits and challenges, and innovations** 105
Joshua C. Johnson, Adam Goellner, K. Rhoades, E. Payne,
D. Horton, K. Malarik, B. Johnson, S. Bradner, M. Hoersten,
D. Wolf, Honda R&D Americas, Inc., USA
- From i30 to i30: an evolutionary journey
for Hyundai C-seg bestseller** 131
Axel Honisch, M. Lugert, A. Pizzuto, T. Schöning,
Hyundai Motor Europe Technical Center GmbH

CHASSIS COMPONENTS AND HISTORICAL ASPECTS

- mSTARS – modular Semi-Trailing Arm Rear Suspension** 135
Knut Heidsieck, K. Wallgren, ZF Friedrichshafen AG
- Composite chassis components** 145
Alberto Girelli Consolaro, N. Zandbergen,
Dr. P. Zandbergen, Dr. F. Wolf-Monheim, F. Italiano,
Ford Research and Innovation Center Aachen
- Mubea chassis springs – development of GFRP leaf springs
for best-in-class lightweight design and functional performance** 163
Dr. Jochen Asbeck, Dr. J. Stimpfl, Mubea Fahrwerksfedern GmbH
- Stimulus address | Weight-bearing elements –
from chassis to unit bodies and back to driving modules** 173
Eric Eckermann, AutoHistorica

PARALLEL STRAND II

VIRTUAL DEVELOPMENT METHODS

- Explicit model predictive control of semi-active suspension systems using Artificial Neural Networks (ANN)** 207
Ronnie Dessort, Dr. C. Chucholowski, TESIS DYNAware GmbH
- Using virtual prototypes for a cross-domain increase in efficiency in the development process** 229
Martin Elbs, A. Frings, IPG Automotive GmbH
- Optimizing passive vehicle dynamics for active safety and autonomous driving** 243
Tim Wright, M. Fainello, Danisi Engineering S.r.l., Italy

OBJECTIVE ASSESSMENTS

- Objective assessment of the dynamic system behavior of multi-chamber air springs** 255
Emre Boyraz, Dr. C. Kandler, M. Gantikow, Dr. Ing. h.c. F. Porsche AG; Prof. Dr. Dr. D. Schramm, Chair of Mechatronics, University of Duisburg-Essen
- Subjective testing of a torque vectoring approach based on driving characteristics in the driving simulator** 271
Minh-Tri Nguyen, A. Fridrich, A. Janeba, Dr. W. Krantz, Prof. Dr. J. Wiedemann, Institute of Internal Combustion Engines and Automotive Engineering (IVK), University of Stuttgart; J. Neubeck, Research Institute of Automotive Engineering and Vehicle Engines Stuttgart (FKFS)
- Objectification of steering feel and application in the context of virtual steering feel tuning** 289
Dr. Stefan Grüner, T. Werner, B. Käpernick, Robert Bosch Automotive Steering GmbH
- Model-based safety validation of the automated driving function highway pilot** 309
Halil Beglerovic, A. Ravi, N. Wikström, Dr. H.-M. Koegeler, Dr. A. Leitner, Dr. J. Holzinger, AVL List GmbH, Austria

CHASSIS.TECH SECTION

DEVELOPMENT METHODS

- The basis for a process chain for functional component data** 335
Michael Baumann, Dr. Christoph Böhm, Daimler AG
- On the design of actuators and control systems in early development stages** 337
Amir Zare, L. Rath-Maia, Dr. M. Zimmermann, BMW Group;
Prof. Dr. K. Michels, Institute of Automation (IAT),
University of Bremen
- Process design for a companywide geometrical integration of manufacturing issues in the early development phases based on the example of automotive suspension** 353
Bastian Leistner, Prof. Dr. R. Mayer, Faculty of
Mechanical Engineering, Chemnitz University of Technology;
D. Berkan, BMW Group

DRIVING COMFORT

- Experimental comparison of the analysis methods for vibration transmission in the chassis** 373
Christian Schubert, S. Pries, M. Jaensch, Dr. K. Çalışkan,
Prof. Dr. F. Küçükay, Institute of Automotive Engineering (IfF),
TU Braunschweig
- Effect of friction reduction of magneto-rheological semi-active damper on ride comfort and vehicle dynamics** 389
Kentaro Komori, G. Fujimoto, T. Tsukamoto, D. Endo,
Honda R&D Co., Ltd., Japan
- Development of an integrated chassis design analysis tool using Excel graphical user interface** 411
Dr. Young Deuk Kim, H. K. Jung, M. W. Kang, H. S. Cho,
Hyundai Motor Company, South Korea; Prof. S. S. Kim,
Kookmin University, Graduate School of Automotive Engineering,
South Korea

CHASSIS CONTROL SYSTEMS

SKYACTIV TECHNOLOGY to enhance 'Jinba-Ittai' 429

Tohru Yoshioka, O. Sunahara, Y. Takahara, D. Umetsu,
H. Matsuoka, T. Yamamoto, N. Kaneshina, R. Shimizu,
Mazda Motor Corporation, Japan; J. Takahashi, Hitachi, Ltd., Japan;
Prof. M. Yamakado, Kanagawa Institute of Technology (KAIT), Japan

New torque vectoring functions for modular electrical propulsion 447

Rob Kraaijeveld, M. Dorn, K. Wolff, FEV Europe GmbH

Controller concept for automated lateral control 465

Felix Tigges, F. Krauns, A. Hafner, Dr. R. Henze,
Prof. Dr. F. Küçükay, Institute of Automotive Engineering (IfF),
TU Braunschweig

STEERING.TECH SECTION

STEERING SYSTEMS AND FUNCTIONS

- Dynamic All-wheel Steering (DAS)** 487
Dr. Anton Obermüller, Dr. K. Diepold, Dr. C. Schimmel,
I. Scharfenbaum, Dr. J. Schuller, Dr. R. Schwarz, AUDI AG
- Development of Electric Power Assisted Steering (EPAS)
for global emerging markets such as India** 499
Anand Mule, S. Matsagar, J. K. Sinha, Tata Technologies Limited,
India; S. Salunkhe, Tata Motors Limited, India
- The choice of hand positions on the steering wheel** 501
Christian Strümpfer, TAKATA AG

VIRTUAL DEVELOPMENT METHODS

- Systematic model-based vibration analysis
of a controlled electric power steering system** 505
Prof. Dr. Gerd Wittler, Faculty of Mechatronics and
Electrical Engineering, University of Applied Sciences Esslingen;
M. Haßenberg, Prof. Dr. H. Henrichfreise,
Cologne Laboratory of Mechatronics (CLM),
Cologne University of Applied Sciences; H. Briesse, T. Schubert,
DMecS Development of Mechatronic Systems GmbH & Co. KG
- Virtual verification of automotive steering systems** 519
Dr. Matthijs Klomp, M. Ljungberg, R. Salif, Volvo Car Group, Sweden;
M. Attinger, H. Bleicher, S. Hoesli, T. Kratzer,
Robert Bosch Automotive Steering GmbH
- Steering system models – an efficient approach
for parameter identification and steering system optimization** 535
Dr. Jinhuai Lin, T. Kloos, Prof. Dr. P. Pfeffer, MdynamiX AG

STEERING FEEL

- The new Hyundai i30's steering feel – integrated performance development by HiL tests and DoE** 555
Alessandro Contini, T. Schöning,
Hyundai Motor Europe Technical Center GmbH
- Model-based online optimization of EPS controller using HiL test benches** 567
Christian Wagner, M. Flormann, T. Meister, Dr. R. Henze,
Prof. Dr. F. Küçükay, Institute of Automotive Engineering (IfF),
TU Braunschweig
- Evaluation of the robustness of an EPS control system in an early stage of the product development life cycle** 581
Paul Milbaier, Dr. S. Grüner, M. Heger, A. Gaedke,
Robert Bosch Automotive Steering GmbH

BRAKE.TECH SECTION

HIGH-PERFORMANCE BRAKES AND TEST METHODS

**Regenerative braking during high-performance driving
in super sports vehicles** 597

Jorge Alberto Jáuregui, Bosch Engineering GmbH

Simplified thermo-elastic modeling of high-performance brakes 611

Prof. Dr. Giampiero Mastinu, Prof. M. Gobbi,
Department of Mechanical Engineering, Politecnico di Milano, Italy;
C. Cantoni, R. Passoni, Brembo S.p.A., Italy

Future braking tests for the 613

**Periodical Technical Inspection (PTI) –
Is the braking effect test still up-to-date?**

Rafael Frankenstein, Central Agency for PTI /
FSD Fahrzeugsystemdaten GmbH

BRAKE WEAR PARTICLE EMISSIONS AND MATERIALS

Development of a commonized methodology 627

**for measuring brake wear particles –
current status within the PMP IWG**

Theodoros Grigoratos, G. Martini, Joint Research Centre (JRC),
European Commission (EC), Italy

Investigation possibilities of brake particle emissions 629

on a brake dynamometer

Dr. Sebastian Gramstat, R. Waninger, AUDI AG;
Dr. D. Lugovyy, M. Schröder, Horiba Europe GmbH

**Thermal spray ceramic coatings as friction surfaces
of brake rotors** 655

Septimiu Popa, Prof. Dr. Dr. R. Gadow, Prof. Dr. A. Killinger,
Institute for Manufacturing Technologies of Ceramic Components
and Composites (IFKB), University of Stuttgart

BRAKE SYSTEMS OF THE FUTURE

A new wheel-brake concept in the context of mobility trends 659
Paul Linhoff, Continental Teves AG & Co. oHG

Downsizing potential of wheel brakes in electric vehicles 661
Daniel Wagner, Prof. Dr. M. Lienkamp,
Institute of Automotive Technology (FTM), TU Munich;
Dr. J. Hoffmann, Continental Teves AG & Co. oHG

Integrated Power Brake (IPB) – 693
modular set extension for highly automated driving
Urs Bauer, M. Brand, Dr. T. Maucher, Robert Bosch GmbH

TIRE.WHEEL.TECH SECTION

DEVELOPMENTAL AIMS AND OBJECTIFICATION

Passenger car vs. truck tires – different development priorities 715
Stephan Brückner, Hankook Tire Europe GmbH

Prediction of driver's handling assessment 717
using a general regression neural network
Dr. Saskia Monsma, HAN University of Applied Sciences,
The Netherlands

Application of objective vehicle dynamics methods 735
in the tire development process
Christian Cramer, Prof. Dr. B. Wies,
Continental Reifen Deutschland GmbH

TIRE TESTING AND SIMULATION

Advanced method for virtual tire and braking distance simulation 757
Carlo Lugaro, S. Huisman, TASS International, The Netherlands;
J. Schöling, TASS International GmbH; Dr. F. Niedermeier,
B. Wassertheurer, BMW Group

Decoupling the physical effects of transient tire behavior 779
based on optical measurements of carcass deformation
Pavel Sarkisov, Prof. Dr. G. Prokop, J. Kubenz,
Institute for Automotive Engineering Dresden (IAD), TU Dresden;
Dr. S. Popov, B. Moscow, Chair of Wheeled Vehicles,
Bauman Moscow State Technical University, Russia

Influence of testing surface on tire lateral force characteristics 795
Christian Ludwig, Hyundai Motor Europe Technical Center GmbH;
C. S. Kim, Hyundai Motor Company, South Korea

WHEEL TECHNOLOGIES AND TRENDS

- Possible contributions of the wheel regarding CO₂ emissions or how to increase the range of electrically powered vehicles** 811
Dr. Detlef Kube, H. J. Klamann, M. Timm,
UNIWHEELS Automotive (Germany) GmbH
- Influence of rotating wheels on the vehicle dynamics of passenger cars** 813
Maximilian Georg Reisner, Prof. Dr. G. Prokop,
Institute for Automotive Engineering Dresden (IAD), TU Dresden;
R. Clauß, AUDI AG
- Carbon wheels conquer the market – benefit, state-of-the-art, foresight** 835
Dr. Jens Werner, ThyssenKrupp Carbon Components GmbH
