Acknowledgment — VII

Preface — IX

Introduction — 1

1 Fractional Difference Equations — 5

1.1 Fractional difference Gronwall inequalities — 5

1.1.1 Introduction — 5

1.1.2 Caputo like fractional difference — 5

1.1.3 Linear fractional difference equation — 7

1.1.4 Fractional difference inequalities — 17

1.2 S -asymptotically periodic solutions — 20

1.2.1 Introduction — 20

1.2.2 Preliminaries — 21

1.2.3 Non-existence of periodic solutions — 22

1.2.4 Existence and uniqueness results — 27

2 Fractional Integral Equations — 37

2.1 Abel-type nonlinear integral equations — 37

2.1.1 Introduction — 37

2.1.2 Preliminaries — 38

2.1.3 Existence and uniqueness of non-trivial solution in an order interval — 40

2.1.4 General solutions of Erdélyi–Kober type integral equations — 48

2.1.5 Illustrative examples — 48

2.2 Quadratic Erdélyi–Kober type integral equations of fractional order — 51

2.2.1 Introduction — 51

2.2.2 Preliminaries — 52

2.2.3 Existence and limit property of solutions — 53

2.2.4 Uniqueness and another existence results — 60

2.2.5 Applications — 63

2.3 Fully nonlinear Erdélyi–Kober fractional integral equations — 67

2.3.1 Introduction — 67

2.3.2 Main result — 67

2.3.3 Example — 76

2.4 Quadratic Weyl fractional integral equations — 77

2.4.1 Introduction — 77

2.4.2	Preliminaries —	78
2.4.3	Some basic properties of Weyl kernel —	79
2.4.4	Existence and uniform local attractivity of 2π -periodic solutions —	82
2.4.5	Example —	89
3	Fractional Differential Equations —	91
3.1	Asymptotically periodic solutions —	91
3.1.1	Introduction —	91
3.1.2	Preliminaries —	92
3.1.3	Non-existence results for periodic solutions —	92
3.1.4	Existence results for asymptotically periodic solutions —	94
3.1.5	Further extensions —	98
3.2	Modified fractional iterative functional differential equations —	103
3.2.1	Introduction —	103
3.2.2	Notation, definitions and auxiliary facts —	105
3.2.3	Existence —	106
3.2.4	Data dependence —	111
3.2.5	Examples —	113
3.3	Ulam–Hyers–Rassias stability for semilinear equations —	116
3.3.1	Introduction —	116
3.3.2	Ulam–Hyers–Rassias stability for surjective linear equations on Banach spaces —	116
3.3.3	Ulam–Hyers–Rassias stability for linear equations on Banach spaces with closed ranges —	123
3.3.4	Ulam–Hyers–Rassias stability for surjective semilinear equations between Banach spaces —	124
3.4	Practical Ulam–Hyers–Rassias stability for nonlinear equations —	126
3.4.1	Introduction —	126
3.4.2	Main results —	127
3.4.3	Examples —	131
3.5	Ulam–Hyers–Mittag-Leffler stability of fractional delay differential equations —	132
3.5.1	Introduction —	132
3.5.2	Preliminaries —	132
3.5.3	Main results —	133
3.5.4	Examples —	138
3.6	Nonlinear impulsive fractional differential equations —	139
3.6.1	Introduction —	139
3.6.2	Preliminaries —	140
3.6.3	Existence results for impulsive Cauchy problems —	141
3.6.4	Ulam stability results for impulsive fractional differential equations —	148

3.6.5	Existence results for impulsive boundary value problems —	151
3.6.6	Applications —	156
3.7	Fractional differential switched systems with coupled nonlocal initial and impulsive conditions —	158
3.7.1	Introduction —	158
3.7.2	Preliminaries —	159
3.7.3	Existence and uniqueness result via Banach fixed point theorem —	160
3.7.4	Existence result via Krasnoselskii fixed point theorem —	162
3.7.5	Existence result via Leray–Schauder fixed point theorem —	164
3.7.6	Existence result for the resonant case: Landesman–Lazer conditions —	166
3.7.7	Ulam type stability results —	169
3.8	Not instantaneous impulsive fractional differential equations —	172
3.8.1	Introduction —	172
3.8.2	Framework of linear impulsive fractional Cauchy problem —	173
3.8.3	Generalized Ulam–Hyers–Rassias stability concept —	175
3.8.4	Main results via fixed point methods —	176
3.9	Center stable manifold result for planar fractional damped equations —	182
3.9.1	Introduction —	182
3.9.2	Asymptotic behavior of Mittag-Leffler functions $E_{\alpha,\beta}$ —	183
3.9.3	Planar fractional Cauchy problems —	184
3.9.4	Center stable manifold result —	185
3.10	Periodic fractional differential equations with impulses —	197
3.10.1	Introduction —	197
3.10.2	FDE with Caputo derivatives with varying lower limits —	198
3.10.3	FDE with Caputo derivatives with fixed lower limits —	209
3.10.4	Conclusions —	213
4	Fractional Evolution Equations: Continued —	215
4.1	Fractional evolution equations with periodic boundary conditions —	215
4.1.1	Introduction —	215
4.1.2	Homogeneous periodic boundary value problem —	216
4.1.3	Non-homogeneous periodic boundary value problem —	217
4.1.4	Parameter perturbation methods for robustness —	221
4.1.5	Example —	223
4.2	Abstract Cauchy problems for fractional evolution equations —	224
4.2.1	Introduction —	224
4.2.2	Preliminaries —	225
4.2.3	Existence and uniqueness theorems of solutions for Problem (I) —	226
4.2.4	Existence and uniqueness theorems of solutions for Problem (II) —	231

4.2.5	Existence and uniqueness theorems of solutions for Problem (III) —	233
4.3	Nonlocal Cauchy problems for Volterra–Fredholm type fractional evolution equations —	243
4.3.1	Introduction —	243
4.3.2	Preliminaries —	244
4.3.3	Existence of mild solutions —	245
4.3.4	Example —	257
4.4	Controllability of Sobolev type fractional functional evolution equations —	259
4.4.1	Introduction —	259
4.4.2	Preliminaries —	259
4.4.3	Characteristic solution operators and their properties —	260
4.4.4	Main results —	263
4.4.5	Example —	268
4.5	Relaxed controls for nonlinear impulsive fractional evolution equations —	271
4.5.1	Introduction —	271
4.5.2	Problem statement —	272
4.5.3	Original and relaxed fractional impulsive control systems —	273
4.5.4	Properties of relaxed trajectories for fractional impulsive control systems —	280
4.5.5	Example —	284
5	Fractional Differential Inclusions —	287
5.1	Fractional differential inclusions with anti-periodic conditions —	287
5.1.1	Introduction —	287
5.1.2	Preliminaries —	288
5.1.3	Existence results for (5.1) —	293
5.1.4	Existence results for (5.2) —	295
5.1.5	Applications to fractional lattice inclusions —	302
5.2	Nonlocal Cauchy problems for semilinear fractional differential inclusions —	304
5.2.1	Introduction —	304
5.2.2	Preliminaries and notation —	305
5.2.3	Existence results —	306
5.2.4	Examples —	315
5.3	Nonlocal impulsive fractional differential inclusions —	318
5.3.1	Introduction —	318
5.3.2	Preliminaries and notation —	320
5.3.3	Existence results for convex case —	322
5.3.4	Existence results for non-convex case —	334

A Appendix — 337

- A.1 Functional analysis — 337
- A.1.1 Basic notation and results — 337
- A.1.2 Banach functional spaces — 337
- A.1.3 Linear operators — 339
- A.1.4 Semigroup of linear operators — 339
- A.1.5 Metric spaces — 339
- A.2 Fractional differential calculus — 340
- A.3 Henry–Gronwall’s inequality — 342
- A.4 Measures of noncompactness — 343
- A.5 Multifunctions — 346

Bibliography — 349**Index — 365**
