Preface — VII

Basic notation — XI

1 Introduction — 1

2 Generalized formulations of parabolic and hyperbolic problems — 9

2.1 Finite-dimensional mechanical systems — 9

2.1.1 Forced motions of a mechanical system with elastic elements — 10

2.1.2 Variational statement of mechanical problems — 11

2.1.3 Relation with conventional variational principles — 13

2.2 Longitudinal motions of elastic rods — 15

2.2.1 Equations of rod dynamics — 16

2.2.2 Variational statement of the IBVP — 17

2.3 Membrane vibrations and acoustic waves — 20

2.3.1 Classical statement — 21

2.3.2 Weakened formulation relying on the MIDR — 23

2.3.3 Conditions of stationarity — 24

2.4 Heat transfer in solids — 25

2.4.1 Equations in linear thermodynamics — 26

2.4.2 Generalized formulation based on the MIDR — 26

2.4.3 Variational properties of the minimization problem — 28

3 Variational principles in linear elasticity — 31

3.1 Dynamics of elastic bodies — 31

3.1.1 Problems of elastodynamics — 31

3.1.2 Hamilton principles — 33

3.1.3 Integrodifferential statement in elasticity — 35

3.1.4 A family of constitutive functionals — 36

3.1.5 Comparative analysis of variational problems — 38

3.1.6 Dynamic variational principle in displacements and stresses — 41

3.2 Spectral problems in elasticity — 43

3.2.1 Harmonic vibrations of elastic bodies — 43

3.2.2 Natural vibrations of solids — 45

3.2.3 Variational statements of harmonic problems — 45

3.3 Variational formulations in elastostatics — 47

3.3.1 Static problems in linear elasticity — 47

3.3.2 Relationship of static variational principles — 48

3.3.3 Bilateral energy estimates — 50

4	Variational statements in structural mechanics — 53
4.1	Lateral motions of elastic beams — 53
4.1.1	Dynamic equations for beam bending — 53
4.1.2	Complementary Hamilton principles — 55
4.1.3	Method of integrodifferential relations in beam theory — 57
4.1.4	Energy estimates of solution quality — 58
4.1.5	A family of variational problems — 59
4.1.6	Comparison of variational formulations — 62
4.2	Longitudinal motions of viscoelastic rods — 64
4.2.1	Models of deformation with viscosity and rheology — 64
4.2.2	Minimization with integral constitutive relations — 65
4.3	Structures with lumped and distributed parameters — 67
4.3.1	Motions of a rod weighted at the ends — 67
4.3.2	Variational statement for hybrid system dynamics — 69
5	Ritz method for initial-boundary value problems — 71
5.1	Finite-dimensional dynamic problems — 71
5.1.1	Chain of linear oscillators — 71
5.1.2	Polynomial approximation of time functions — 72
5.2	Bivariate polynomials in rod and beam modeling — 74
5.2.1	Longitudinal motions of an elastic homogeneous rod — 74
5.2.2	Conventional Galerkin method — 77
5.2.3	Ritz method and the MIDR — 78
5.2.4	Lateral elastic displacements — 83
5.2.5	Numerical simulation of beam bending — 85
5.3	FEM modeling of elastic rod dynamics — 88
5.3.1	Modified minimization problem — 88
5.3.2	Piecewise polynomial approximations — 89
5.3.3	Continuity of kinematic and dynamic fields — 93
5.3.4	Constitutive relations in the FEM — 97
5.4	Spline representation of elastic body motions — 101
5.4.1	Approximation to a problem of elastodynamics — 101
5.4.2	Forced motions of an elastic body — 104
5.4.3	Approximations of displacement and stress fields — 105
5.4.4	Numerical example — 107
6	Variational and projection techniques with semi-discretization — 113
6.1	Variational approach to elastic structure dynamics — 113
6.1.1	Variational statements of a dynamic problem — 113
6.1.2	Approximating system of ODEs — 114
6.1.3	Numerical analysis of elastic beam motions — 118
6.2	Projection approach to dynamic problems — 122

6.2.1	Projection statement for elastic beam motions —	122
6.2.2	Modification of the Petrov–Galerkin method —	123
6.3	FEM realization of the Petrov–Galerkin method —	125
7	Integrodifferential approach to eigenvalue problems —	129
7.1	Modification of the Galerkin method for elastic structures —	129
7.1.1	Longitudinal motions of an elastic rod —	129
7.1.2	Comparison of Galerkin and variational approaches —	131
7.1.3	Projection approach based on the MIDR —	136
7.2	Semi-discretization in problems of natural beam vibrations —	139
7.2.1	Natural vibrations of elastic plates —	139
7.2.2	Variational approach to the eigenvalue problem —	142
7.2.3	Projection approach to the eigenvalue problem —	144
7.2.4	Variational versus projection approaches —	146
7.2.5	Longitudinal plate vibrations —	147
7.2.6	Lateral in-plane vibrations —	150
7.3	Special models for plate motions —	152
7.3.1	Statement of the eigenvalue problem —	152
7.3.2	Simplified model of longitudinal vibrations —	156
7.3.3	Refined model of 2D rod vibrations —	159
7.3.4	Lateral vibrations of a free 2D beam —	161
8	Spatial vibrations of elastic beams with convex cross-sections —	165
8.1	Natural motions of a cuboid beam —	165
8.1.1	Projection approach to a 3D eigenvalue problem in elasticity —	165
8.1.2	System of DAEs approximating the beam vibrations —	167
8.1.3	Decomposition of vibration equations for a homogeneous beam —	168
8.1.4	Breathing of a body with the square cross section —	170
8.1.5	Torsion of the body —	173
8.1.6	Longitudinal vibrations —	174
8.1.7	Lateral vibrations —	177
8.2	Natural vibrations of beams with triangular cross sections —	180
8.2.1	Dynamics of an elastic triangular prism —	180
8.2.2	Semi-discretization of displacement and stress fields —	181
8.2.3	Integral projections for the triangular cross section —	184
8.2.4	Natural vibrations of a beam with the isosceles cross section —	189
9	Double minimization in optimal control problems —	197
9.1	Optimization of beam motions with polynomials —	197
9.1.1	Statement of an optimal control problem —	197
9.1.2	Discretization based on the MIDR —	198
9.1.3	Parametric optimization of the beam motions —	199

9.1.4	Numerical examples of controlled motions —	200
9.2	Polynomial control in dynamic problems of linear elasticity —	206
9.2.1	Statement of an inverse dynamic problem —	206
9.2.2	Time-space discretization based on the MIDR —	208
9.2.3	Optimization of motion parameters —	208
9.2.4	Structure of polynomial approximations —	209
9.2.5	Longitudinal motions of a controlled elastic rod —	210
9.2.6	Controlled motions of a cuboid body with the square bases —	212
9.2.7	Comparison of 2D and 4D models —	215
9.3	FEM in control problems of elastic rod displacements —	220
9.3.1	Statement of an optimal control problem —	220
9.3.2	Parameterization of state and control functions —	221
9.3.3	Control optimization for approximate systems —	223
9.3.4	Regularization of integral error —	224
9.3.5	Exact solution of the control problem —	226
10	Semi-discrete approximations in inverse dynamic problems —	229
10.1	Projection approach to optimization in elastodynamics —	229
10.1.1	Semi-discretization and FEM in controlled beam dynamics —	229
10.1.2	Optimization and regularization of approximate solutions —	231
10.1.3	Solution quality in parametric optimization —	232
10.2	Optimal control of elastic body motions —	235
10.2.1	Variational formulation of a direct dynamic problem —	235
10.2.2	Projection formulation of the problem on body motions —	237
10.2.3	Statement of an optimal control problem —	238
10.2.4	Algorithm of discretization —	239
10.2.5	Spectral boundary value problem —	242
10.2.6	System of ODEs with respect to time —	244
10.2.7	Finite-dimensional control problem —	245
10.3	Variational approach to optimization of parabolic systems —	248
10.3.1	Statement of a control problem —	248
10.3.2	Fourier method in heat transfer problems —	250
10.3.3	Optimal control problem of rod heating —	252
10.3.4	Variational formulation of the IBVP —	253
10.3.5	Spatial discretization with polynomials —	253
10.3.6	Discretization error in the variational approach —	255
10.3.7	Numerical results of heat control —	255
11	Modeling and control in mechatronics —	259
11.1	Optimal rotations of an electromechanical manipulator —	259
11.1.1	Motion of a flexible link by a drive —	259
11.1.2	Optimal angular rotation of the link —	261

11.1.3	Projection approach to the problem on link motions —	263
11.2	Control of a flexible structure with viscoelastic links —	268
11.2.1	Controlled mechanism with flexible links —	268
11.2.2	Optimal control problem of structure motion —	269
11.2.3	Finite element algorithm —	270
11.2.4	Numerical simulation of structure dynamics —	271

A Vectors and tensors — 275

B Sobolev spaces — 279

Bibliography — 281

Index — 287
