

Table of Contents

Preface	1
----------------------	---

PART I: THEORY

Keynote Lecture

Recent Advances in Finite Element Limit Analysis	3
<i>Kristian Krabbenhoft</i>	

Material Models for Soils

Developments of Hypoplastic Models of Soils.....	15
<i>Andrej Niemunis</i>	

Constitutive Modelling of Soil Viscous Behavior	17
<i>David Mašin, Jan Jerman</i>	

Continuum Based Simulations

Coupled Eulerian Lagrangian Method and Applications in Geotechnics	21
<i>Gang Qiu</i>	

Arbitrary Lagrangian-Eulerian Finite Element Formulations Applied to Geotechnical Problems.....	33
<i>Montaser Bakroon, Reza Daryaei, Daniel Aubram, Frank Rackwitz</i>	

Application of Smoothed Particle Hydrodynamics for the Simulation of Saturated Sand	45
<i>Bozhana Kocak</i>	

Material Point Method and Applications in Geotechnical Engineering	57
<i>Alexander Rohe, Mario Martinelli</i>	

New Developments in PLAXIS: Material Point Method and Reliability Analysis	73
<i>Ronald B.J. Brinkgreve, Anita Laera, Markus Bürg</i>	

VII

Simulations Based on Hybrid Approaches

Multiscale Modelling of Physical Processes at the Water-Soil Interface with a Coupled CFD-DEM Method	89
<i>Alice Hager, Désirée Plenker, Manuela Kanitz</i>	
Granular column collapse on slope: Effect of permeability on the runout characteristics	107
<i>Krishna Kumar, Jean-Yves Delenne, Kenichi Soga</i>	
Usage of DEM for Simulation of Particle Systems and Dense Gas-Solid Flows	129
<i>Stefan Heinrich, Maksym Dosta</i>	

PART II: APPLICATION

Keynote Lecture

Numerical Methods in Practical Geotechnical Engineering and Research – Tasks, Gaps, Possibilities.....	135
<i>Thomas Benz</i>	

Recommendations of Work Group: „Numerik in der Geotechnik“

Stage of Development of the (German Geotechnical Society's) Recommendations on Stability Analyses using FEM.....	137
<i>Peter v. Wolfersdorff, Sascha Henke</i>	
Comparison of Different Methods for Slope Stability Analysis	141
<i>Franz Tschuchnigg, Helmut F. Schweiger</i>	

Teaching Numerics in Geotechnics at Universities

Computational Methods in Civil and Structural Engineering – Demand for Specialists?.....	159
<i>Günter Axel Rombach</i>	
Master in Computational Mechanics.....	163
<i>Kai-Uwe Bletzinger</i>	

Case Studies

Back Analysis of a Pull-Out Test of a Ground Anchor Employing a Multilaminate Constitutive Model	169
<i>Helmut F. Schweiger, Carla Fabris, Juraj Chalmovský, Franz Tschuchnigg</i>	

Numerical and Experimental Investigations on the Deformations of Monopile Foundations185
Jan Dührkop, Stefan Maretzki, Tim Pucker, Sören Schluroff, Severin Spill

Application of an Advanced Constitutive Model for Cementitious Materials.....203
Bert Schädlich, Kurt Borchert

Deformation Prediction of Existing Structures in close Proximity of Deep Excavations221
Steffen Kinzler, Karl Morgen

Numerical Based Design of Protection Systems Against Landslides239
Francesca Ceccato, Paolo Simonini

Numerical Calculations for Foundation and Structure of the Main Station Stuttgart S21257
Alexander Mühl, Michael Brunner, Rene Luna, Clemens Neugart, Torsten Noack

Numerical Investigation of the Stability of Sea Dikes: Verification and Plausibility Approaches for a Fluid-Mechanical Coupled FDM-Model.....281
Julia Sorgatz, Thomas Nuber

Numerical Simulation of Solution Mining Caverns in Salt with Real Shapes and Geometries293
Lothar te Kamp, Stefan Kellerbauer

Rocking Isolation of Structures: Numerical Analysis of a Motorway Bridge295
Ioannis Anastasopoulos

Freezing Calculations Tunnel Rastatt305
Heiko Neher, Christoph Niklasch

Influence of Geometrical Imperfections on the Behaviour of Rigid Soil Reinforcement Columns317
Cecilia Bohn, Timo Ackermann, Ulrich Trunk
