Preface — IX

Acknowledgement — XI

List of Tables — XIX

List of Symbols — XXI

1	Random phenomena — 1
1.1	Introduction — 1
1.1.1	Waiting time — 1
1.1.2	Random events — 2
1.2	A random experiment — 7
1.3	Venn diagrams — 14
1.4	Probability or chance of occurrence of a random event — 18
1.4.1	Postulates for probability — 18
1.5	How to assign probabilities to individual events? — 22
1.5.1	Buffon's "clean tile problem" — 29
2	Probability — 33
2.1	Introduction — 33
2.2	Permutations — 33
2.3	Combinations — 37
2.4	Sum Σ and product $\prod$ notation — 41
2.4.1	The product notation or pi notation — 45
2.5	Conditional probabilities — 48
2.5.1	The total probability law — 53
2.5.2	Bayes' rule — 55
2.5.3	Entropy — 57
3	Random variables — 61
3.1	Introduction — 61
3.2	Axioms for probability/density function and distribution functions — 66
3.2.1	Axioms for a distribution function — 72
3.2.2	Mixed cases — 72
3.3	Some commonly used series — 76
3.3.1	Exponential series — 76
3.3.2	Logarithmic series — 76

3.3.3	Binomial series — 77
3.3.4	Trigonometric series — 78
3.3.5	A note on logarithms — 78
4	Expected values — 83
4.1	Introduction — 83
4.2	Expected values — 83
4.2.1	Measures of central tendency — 88
4.2.2	Measures of scatter or dispersion — 91
4.2.3	Some properties of variance — 91
4.3	Higher moments — 95
4.3.1	Moment generating function — 100
4.3.2	Moments and Mellin transforms — 102
4.3.3	Uniqueness and the moment problem — 104
5	Commonly used discrete distributions — 107
5.1	Introduction — 107
5.2	Bernoulli probability law — 107
5.3	Binomial probability law — 109
5.4	Geometric probability law — 111
5.5	Negative binomial probability law — 113
5.6	Poisson probability law — 117
5.6.1	Poisson probability law from a process — 121
5.7	Discrete hypergeometric probability law — 123
5.8	Other commonly used discrete distributions — 125
6	Commonly used density functions — 133
6.1	Introduction — 133
6.2	Rectangular or uniform density — 133
6.3	A two-parameter gamma density — 136
6.3.1	Exponential density — 139
6.3.2	Chi-square density — 139
6.4	Generalized gamma density — 141
6.4.1	Weibull density — 142
6.5	Beta density — 143
6.6	Laplace density — 146
6.7	Gaussian density or normal density — 147
6.7.1	Moment generating function of the normal density — 151
6.8	Transformation of variables — 153
6.9	A note on skewness and kurtosis — 159
6.10	Mathai's pathway model — 161
6.10.1	Logistic model — 162

6.11	Some more commonly used density functions —	163
7	Joint distributions —	171
7.1	Introduction —	171
7.2	Marginal and conditional probability/density functions —	176
7.2.1	Geometrical interpretations of marginal and conditional distributions —	179
7.3	Statistical independence of random variables —	182
7.4	Expected value —	185
7.4.1	Some properties of expected values —	189
7.4.2	Joint moment generating function —	191
7.4.3	Linear functions of random variables —	195
7.4.4	Some basic properties of the correlation coefficient —	199
7.5	Conditional expectations —	201
7.5.1	Conditional expectation and prediction problem —	204
7.5.2	Regression —	206
7.6	Bayesian procedure —	207
7.7	Transformation of variables —	211
8	Some multivariate distributions —	221
8.1	Introduction —	221
8.2	Some multivariate discrete distributions —	221
8.2.1	Multinomial probability law —	221
8.2.2	The multivariate hypergeometric probability law —	224
8.3	Some multivariate densities —	227
8.3.1	Type-1 Dirichlet density —	227
8.3.2	Type-2 Dirichlet density —	230
8.4	Multivariate normal or Gaussian density —	233
8.4.1	Matrix-variate normal or Gaussian density —	242
8.5	Matrix-variate gamma density —	243
9	Collection of random variables —	249
9.1	Introduction —	249
9.2	Laws of large numbers —	252
9.3	Central limit theorems —	253
9.4	Collection of dependent variables —	257
10	Sampling distributions —	259
10.1	Introduction —	259
10.2	Sampling distributions —	262
10.3	Sampling distributions when the population is normal —	272
10.4	Student- t and F distributions —	277

10.5	Linear forms and quadratic forms —	284
10.6	Order statistics —	291
10.6.1	Density of the smallest order statistic $x_{n:1}$ —	293
10.6.2	Density of the largest order statistic $x_{n:n}$ —	293
10.6.3	The density of the r -th order statistic $x_{n:r}$ —	294
10.6.4	Joint density of the r -th and s -th order statistics $x_{n:r}$ and $x_{n:s}$ —	298
11	Estimation —	303
11.1	Introduction —	303
11.2	Parametric estimation —	305
11.3	Methods of estimation —	320
11.3.1	The method of moments —	321
11.3.2	The method of maximum likelihood —	323
11.3.3	Method of minimum Pearson's X^2 statistic or minimum chi-square method —	329
11.3.4	Minimum dispersion method —	330
11.3.5	Some general properties of point estimators —	332
11.4	Point estimation in the conditional space —	337
11.4.1	Bayes' estimates —	337
11.4.2	Estimation in the conditional space: model building —	340
11.4.3	Some properties of estimators —	342
11.4.4	Some large sample properties of maximum likelihood estimators —	344
11.5	Density estimation —	349
11.5.1	Unique determination of the density/probability function —	349
11.5.2	Estimation of densities —	350
12	Interval estimation —	355
12.1	Introduction —	355
12.2	Interval estimation problems —	355
12.3	Confidence interval for parameters in an exponential population —	358
12.4	Confidence interval for the parameters in a uniform density —	360
12.5	Confidence intervals in discrete distributions —	361
12.5.1	Confidence interval for the Bernoulli parameter p —	362
12.6	Confidence intervals for parameters in $N(\mu, \sigma^2)$ —	365
12.6.1	Confidence intervals for μ —	366
12.6.2	Confidence intervals for σ^2 in $N(\mu, \sigma^2)$ —	369
12.7	Confidence intervals for linear functions of mean values —	372
12.7.1	Confidence intervals for mean values when the variables are dependent —	373
12.7.2	Confidence intervals for linear functions of mean values when there is statistical independence —	375

12.7.3 Confidence intervals for the ratio of variances — 377

13 Tests of statistical hypotheses — 381

13.1 Introduction — 381

13.2 Testing a parametric statistical hypothesis — 382

13.2.1 The likelihood ratio criterion or the λ -criterion — 391

13.3 Testing hypotheses on the parameters of a normal population $N(\mu, \sigma^2)$ — 395

13.3.1 Testing hypotheses on μ in $N(\mu, \sigma^2)$ when σ^2 is known — 395

13.3.2 Tests of hypotheses on μ in $N(\mu, \sigma^2)$ when σ^2 is unknown — 396

13.3.3 Testing hypotheses on σ^2 in a $N(\mu, \sigma^2)$ — 399

13.4 Testing hypotheses in bivariate normal population — 401

13.5 Testing hypotheses on the parameters of independent normal populations — 404

13.6 Approximations when the populations are normal — 408

13.6.1 Student- t approximation to normal — 408

13.6.2 Approximations based on the central limit theorem — 409

13.7 Testing hypotheses in binomial, Poisson and exponential populations — 411

13.7.1 Hypotheses on p , the Bernoulli parameter — 411

13.7.2 Hypotheses on a Poisson parameter — 413

13.7.3 Hypotheses in an exponential population — 414

13.8 Some hypotheses on multivariate normal — 416

13.8.1 Testing the hypothesis of independence — 418

13.9 Some non-parametric tests — 419

13.9.1 Lack-of-fit or goodness-of-fit tests — 420

13.9.2 Test for no association in a contingency table — 425

13.9.3 Kolmogorov-Smirnov statistic D_n — 428

13.9.4 The sign test — 430

13.9.5 The rank test — 431

13.9.6 The run test — 433

14 Model building and regression — 437

14.1 Introduction — 437

14.2 Non-deterministic models — 437

14.2.1 Random walk model — 438

14.2.2 Branching process model — 439

14.2.3 Birth and death process model — 440

14.2.4 Time series models — 440

14.3 Regression type models — 440

14.3.1 Minimization of distance measures — 441

14.3.2 Minimum mean square prediction — 442

14.3.3	Regression on several variables —	447
14.4	Linear regression —	450
14.4.1	Correlation between x_1 and its best linear predictor —	457
14.5	Multiple correlation coefficient $\rho_{1(2\dots k)}$ —	459
14.5.1	Some properties of the multiple correlation coefficient —	459
14.6	Regression analysis versus correlation analysis —	466
14.6.1	Multiple correlation ratio —	466
14.6.2	Multiple correlation as a function of the number of regressed variables —	468
14.7	Estimation of the regression function —	475
14.7.1	Estimation of linear regression of y on x —	476
14.7.2	Inference on the parameters of a simple linear model —	481
14.7.3	Linear regression of y on $x_1, \dots, x_k$ —	484
14.7.4	General linear model —	489
15	Design of experiments and analysis of variance —	493
15.1	Introduction —	493
15.2	Fully randomized experiments —	494
15.2.1	One-way classification model as a general linear model —	498
15.2.2	Analysis of variance table or ANOVA table —	499
15.2.3	Analysis of individual differences —	501
15.3	Randomized block design and two-way classifications —	503
15.3.1	Two-way classification model without interaction —	505
15.3.2	Two-way classification model with interaction —	510
15.4	Latin square designs —	516
15.5	Some other designs —	521
15.5.1	Factorial designs —	521
15.5.2	Incomplete block designs —	522
15.5.3	Response surface analysis —	522
15.5.4	Random effect models —	522
16	Questions and answers —	525
16.1	Questions and answers on probability and random variables —	525
16.2	Questions and answers on model building —	539
16.3	Questions and answers on tests of hypotheses —	549

Tables of percentage points — 559
