

Contents

- 1 What Is the Story to be Told?** 1
 - 1.1 The Encyclopedia of Life: Noah’s Ark Digitized 1
 - 1.2 Natural Theology and the Doctrine of Intelligent Design 4
 - 1.3 The Impact of Modern Philosophy of Science 6
 - 1.4 An Outline and Some Historical Context 7

- 2 The Problem of Change** 11
 - 2.1 Change in a Created World 11
 - 2.2 The Problem of Change 14
 - 2.3 The Distinction of Essential and Accidental Properties 16
 - 2.4 Embryos and the Problem of Change in Organisms 18
 - 2.5 Charles Bonnet and His Understanding of Evolution 23

- 3 Changing World Views** 27
 - 3.1 Robert Chambers (1802–1871) 28
 - 3.2 Maupertuis’ Studies of Patterns of Inheritance 30
 - 3.3 Trembley’s Experiments with the Freshwater Polyp 32
 - 3.4 Georges Buffon’s Evolving World 36
 - 3.5 Chamber’s “Vestiges”: An Evolutionary World View 40
 - 3.6 The First Cause and Secondary Causes 47
 - 3.7 A World of Pre-Established Harmony 52

- 4 Stemming the Tide of Change** 59
 - 4.1 Hugh Miller (1802–1856) 59
 - 4.2 Georges Cuvier and Louis Agassiz: Experts on Fossil Fishes 61
 - 4.3 Miller’s Attack on Transformationism 65
 - 4.4 Miller’s Concept of “Proper Science” 70
 - 4.5 Karl Ernst von Baer and the Importance of Embryology 74
 - 4.6 Intelligent Design and the Four Aristotelian Causes 76

5	A Matter of (Natural) Laws	81
5.1	The Metaphor of the Two Books	82
5.2	Ethics in Nature	84
5.3	Universal Laws of Nature	86
5.4	Lawful Development and the Doctrine of Pre-Existence	88
5.5	Universal Laws and Genuine Change	91
5.6	Description vs. Explanatory Laws	95
5.7	Darwin's Law of the "Higgledy-Higgledy"	101
5.8	Darwin's Test of Evolutionary Theory	108
6	The "Law of Superposition"	111
6.1	The Superposition of Fossils	112
6.2	Systematics and the Classification of Organisms	115
6.3	Ideal vs. Natural Systems	117
6.4	Artificial vs. Natural Kinds	121
6.5	William Whewell's "Consilience of the Evidence"	127
7	Respectable Science: What Is It?	135
7.1	The Definition of Science	136
7.2	Ludwig Wittgenstein and the "Verification Principle"	138
7.3	The Illusion of "Theory-Free Observation"	141
7.4	Karl Popper's Demarcation of Science from Metaphysics	143
7.5	Thomas S. Kuhn and the Social Nature of Science	148
7.6	Paul Feyerabend and Epistemological Anarchism	154
7.7	The Pessimistic View of Science: Reviewed	157
7.8	Description and Explanation: Again	166
8	Linking the Facts: Tracing the Traces	169
8.1	The Problem of the "Uniformity of Nature"	170
8.2	Popper's Failure to Solve the "Problem of Induction"	173
8.3	Abductive Inference: The Mouse in the Wainscoting	176
8.4	Darwin: A Master of Abductive Inference	178
8.5	Darwin and the Importance of Embryology	184
8.6	Clinching the Argument for Evolution	187
