1	Biomass ethanol fuel technology — 1
1.1	Characteristics and application of ethanol — 1
1.1.1	Physical and chemical properties of ethanol — 1
1.1.2	Performance comparison of ethanol and gasoline/diesel — 2
1.2	Production theory of bioethanol — 3
1.2.1	The main methods of ethanol production — 3
1.2.1.1	Microbial fermentation — 3
1.2.1.2	Syngas to ethanol — 4
1.2.2	Biochemical process of ethanol fermentation — 5
1.2.2.1	Carbohydrate degradation — 5
1.2.2.2	Glycolysis — 7
1.2.3	Ethanol fermentation microbiology — 8
1.2.3.1	Ethanol fermentation microbiology based on a sugar platform — 9
1.2.3.2	Pentose fermenting microbes — 13
1.2.4	Breeding of ethanol fermentation microorganisms — 13
1.2.4.1	High ethanol tolerant strains — 14
1.2.4.2	High temperature resistant strains — 15
1.2.4.3	Pentose fermentation strains — 16
1.2.4.4	Saccharification function strains — 16
1.2.4.5	Engineered bacteria for consolidated bioprocessing — 17
1.2.4.6	The breeding of syngas fermentation microorganisms — 17
1.3	Ethanol production from starch feedstocks — 18
1.3.1	Crushing — 18
1.3.2	Steaming and gelatinization — 19
1.3.3	Saccharification — 20
1.3.3.1	Separate hydrolysis and fermentation process — 20
1.3.3.2	Simultaneous saccharification and fermentation process — 20
1.3.3.3	Partial simultaneous saccharification and fermentation process — 21
1.3.3.4	Ethanol Fermentation — 21
1.3.3.5	Ethanol extraction and purification — 24
1.3.3.6	Examples of industrial production — 26
1.4	Ethanol production from sugar feedstocks — 26
1.4.1	Technical process of ethanol production from sugar feedstocks — 27
1.4.1.1	Technological requirements for processing molasses feedstock — 27
1.4.1.2	Devices for the dilution of molasses — 29
1.4.1.3	The treatment process of molasses — 30

1.4.1.4	Acidification, sterilization, clarification, and addition of nutrient salts to molasses — 30
1.4.2	Ethanol production from sweet sorghum stalk — 33
1.4.2.1	Solid-state fermentation process — 33
1.4.2.2	Liquid fermentation process — 35
1.4.3	Bioethanol production cases from sweet sorghum — 36
1.4.3.1	Continuous solid-state fermentation process — 36
1.4.3.2	Raw material pretreatment — 36
1.4.3.3	Yeast activation — 38
1.4.3.4	Joint blender mixer — 38
1.4.3.5	Fermentation — 39
1.5	Ethanol production from cellulosic materials — 41
1.5.1	Pretreatments — 41
1.5.1.1	Dilute acid pretreatment — 41
1.5.1.2	Liquid hot water pretreatment — 44
1.5.1.3	Steam explosion pretreatment — 45
1.5.2	Enzymatic hydrolysis and ethanol fermentation of cellulosic materials — 45
1.5.2.1	Types of cellulase and their structures — 45
1.5.2.2	The hydrolysis mechanism of cellulase — 46
1.5.2.3	Factors affecting enzymatic hydrolysis — 48
1.5.2.4	Ethanol fermentation — 49
1.5.3	A case of cellulosic ethanol production — 50
1.6	Analysis of the economics of ethanol fuel production — 51
1.6.1	Analysis of the economics of ethanol fuel production using starch raw material — 52
1.6.2	Analysis of the economics of ethanol fuel production using sugar raw material — 57
1.6.3	Analysis of the economics of ethanol fuel production using cellulose raw material — 60
1.6.3.1	Simultaneous saccharification and co-fermentation — 61
1.6.3.2	Two-stage dilute acid hydrolysis process — 64
1.7	Environmental impacts of fuel ethanol production and control approaches — 67
1.7.1	Sources of pollutants during ethanol production — 67
1.7.2	Waste treatment methods — 68
1.7.2.1	The production of feed — 69
1.7.2.2	The production of feed yeast — 69
1.7.2.3	Anaerobic treatment — 70
1.7.2.4	Aerobic treatment — 70
1.7.2.5	Dilution agricultural irrigation method — 70
1.7.2.6	Concentration — 71

1.7.2.7	Combustion — 71
1.7.2.8	Comprehensive utilization — 72
1.7.2.9	Fine Chemicals — 72
1.7.3	Approaches to pollutant control — 73
1.8	The general situation of fuel ethanol prepared using biomass both at national and international levels — 77
1.8.1	Research and development of fuel ethanol — 77
1.8.2	Situation of the fuel ethanol industry in China — 79
1.8.2.1	The development of technologies to produce nongrain starch/sugar ethanol — 80
1.8.2.2	The development of cellulosic ethanol production technology — 81
1.8.3	Prospects for the fuel ethanol industry in China — 85
1.8.3.1	Developmental trend — 85
1.8.3.2	Development objectives — 86

Weiming Yi, Xifeng Zhu, and Wei Qi

2	Technologies of biomass pyrolysis — 87
2.1	Principles and technology of biomass fast pyrolysis — 87
2.1.1	Overview of biomass fast pyrolysis — 87
2.1.2	Characteristics of biomass fast pyrolysis — 90
2.1.2.1	Preparation of biomass powder — 92
2.1.2.2	Temperature control of laminar flow furnace — 92
2.1.2.3	Biomass flash volatilization experiments and data processing — 94
2.1.3	Application example of the biomass pyrolysis technology — 98
2.1.3.1	Pretreatment device for feedstock drying — 100
2.1.3.2	Two-stage screw feed device — 101
2.1.3.3	Fluidized-bed pyrolysis reactor — 102
2.1.3.4	Cyclone separator — 103
2.1.3.5	Condensing system — 104
2.2	Upgrading and applications of bio-oil — 105
2.2.1	Physical and chemical properties of bio-oil — 105
2.2.1.1	Ultimate composition of bio-oil — 105
2.2.1.2	Component analysis of bio-oil — 106
2.2.1.3	Physical and chemical properties of bio-oil — 108
2.2.2	Bio-oil upgrading with addition of hydrogen — 112
2.2.2.1	Sulfided Co-Mo and Ni-Mo catalysts — 113
2.2.2.2	Noble metal catalyst for catalytic hydrogenation — 114
2.2.2.3	Two-stage catalytic hydrogenation — 114
2.2.2.4	On-line catalytic hydrogenation — 115
2.2.2.5	Catalytic hydrogenation of bio-oil in situ — 116
2.2.2.6	Upgrading bio-oil by homogeneous catalysis with metal complexes — 116

2.2.2.7	Catalytic hydrogenation of light fraction of bio-oil —	118
2.2.3	Bio-oil upgrading with catalytic cracking —	118
2.2.3.1	Catalyst type —	119
2.2.3.2	Catalytic reaction conditions —	120
2.2.3.3	Catalytic mechanism —	121
2.2.3.4	Catalyst deactivation mechanism —	123
2.2.4	Bio-oil steam reforming for hydrogen production —	125
2.2.4.1	Catalyst selection —	126
2.2.4.2	Preparation of catalysts —	127
2.2.4.3	Characterization of catalysts —	128
2.2.5	Bio-oil combustion technology —	129
2.2.5.1	Combustion characteristics of bio-oil —	129
2.2.5.2	Spray characteristics of bio-oil —	131
2.2.5.3	Bio-oil atomization combustion system —	134
2.2.6	Demo applications of bio-oil —	137
2.2.6.1	Design of the fuel supply system —	137
2.2.6.2	Design of gas supply system —	138
2.2.6.3	Design of the atomizing nozzle —	139
2.2.6.4	Design of the bio-oil combustor —	140
2.2.6.5	Design of flue gas emission system —	141
2.2.6.6	Design of the test monitoring system —	141
2.2.6.7	The results of bio-oil spray combustion —	141
2.3	Carbonization of biomass —	142
2.3.1	Biomass carbonization technology —	142
2.3.1.1	Principle and characteristics of carbonization —	142
2.3.1.2	Carbonization products —	143
2.3.1.3	Factors affecting the carbonization process —	143
2.3.1.4	Types of carbonization technology —	144
2.3.2	The properties and applications of biochar —	147
2.3.2.1	Feedstocks of charcoal —	148
2.3.2.2	Types of charcoal —	148
2.3.2.3	Properties of the charcoal —	149
2.3.2.4	Applications of charcoal —	152
2.3.3	The applications of biomass dry distillation gas —	154
2.3.3.1	Jiaozuo biomass carbon gas oil cogeneration system —	155
2.3.3.2	Dalian biomass energy engineering —	155
2.3.3.3	Liaoning biomass distilled gas production device —	157
2.3.4	Case study of biomass carbonization —	158
2.3.4.1	Estimated sales (ES) —	164
2.3.4.2	Unit fixed costs (UFC) —	164
2.3.4.3	Unit variable costs (UVC) —	165
2.3.4.4	Unit sales tax and surcharges (USTAS) —	166

- 2.3.4.5 Price of main feedstock materials on breakeven point (POMF on BEP) — 166

Changfeng Yan, Quanguo Zhang, and Shunni Zhu

3 Technologies for biomass-based hydrogen production — 169

- 3.1 Hydrogen energy — 169
 - 3.1.1 Introduction — 169
 - 3.1.2 Properties of hydrogen — 169
 - 3.1.2.1 Physical properties of hydrogen — 169
 - 3.1.2.2 Chemical properties of hydrogen — 170
 - 3.1.2.3 Characteristics of hydrogen energy — 171
 - 3.1.3 Hydrogen production from biomass — 172
 - 3.1.4 Development and utilization of hydrogen — 173
- 3.2 Thermochemical routes for hydrogen production from biomass — 174
 - 3.2.1 Introduction — 174
 - 3.2.2 Fast pyrolysis of biomass to hydrogen — 175
 - 3.2.3 Biomass gasification to hydrogen — 176
 - 3.2.3.1 Introduction — 176
 - 3.2.3.2 Biomass gasification reactor — 177
 - 3.2.4 Hydrogen production from biomass gasification in supercritical water — 178
 - 3.2.4.1 Reaction mechanism — 179
 - 3.2.4.2 Reactors for biomass gasification in supercritical water — 181
 - 3.2.5 Hydrogen production from biomass gasification via solid heat carrier — 182
 - 3.2.5.1 Hydrogen production from biomass gasification with chemical looping process of carbonation/calcination cycle — 184
 - 3.2.5.2 Chemical looping hydrogen production from biomass — 187
- 3.2.6 Hydrogen cleanup and purification — 188
 - 3.2.6.1 Catalytic tar removal for hydrogen purification — 188
 - 3.2.6.2 CO removal for hydrogen purification — 189
- 3.3 Hydrogen production from biomass derivatives — 194
 - 3.3.1 Hydrogen production from bio-oil — 194
 - 3.3.1.1 Properties of bio-oil — 194
 - 3.3.1.2 Catalysts for hydrogen production via bio-oil steam reforming — 194
 - 3.3.1.3 Bio-oil partial oxidation for hydrogen production — 198
 - 3.3.1.4 Autothermal reforming for hydrogen production — 198
 - 3.3.1.5 Reactors for hydrogen production from bio-oil reforming — 199
 - 3.3.2 Hydrogen production from methanol — 199
 - 3.3.2.1 Mechanism — 199
 - 3.3.2.2 Hydrogen production methods — 200
 - 3.3.2.3 Catalyst for methanol steam reforming — 201

3.3.2.4	Methanol steam reforming reactor —	202
3.3.2.5	Demonstration of the system —	203
3.3.2.6	Numerical simulation —	204
3.3.3	Hydrogen production from ethanol —	205
3.3.3.1	Technologies of hydrogen production from ethanol —	205
3.3.3.2	Catalysts —	210
3.3.3.3	Catalyst support —	211
3.3.3.4	Catalyst promoter —	212
3.3.4	Hydrogen production from dimethyl ether —	212
3.3.4.1	DME reforming for hydrogen production —	213
3.3.4.2	Catalysts for hydrogen production from steam reforming —	214
3.3.4.3	Reactors and their performance for DME steam reforming —	216
3.3.4.4	Numerical simulation —	216
3.4	Biological hydrogen production —	217
3.4.1	Introduction —	217
3.4.2	Direct biophotolysis —	218
3.4.3	Indirect biophotolysis —	220
3.4.4	Photofermentation —	222
3.4.5	Dark fermentation —	224
3.4.5.1	Dark fermentative microorganisms —	225
3.4.5.2	Mechanism of dark fermentation and influencing factors —	227
3.4.6	Biological water-gas shift reaction —	231

Tiejun Wang, Longlong Ma, Yujing Weng, Junlin Tu, Mingyue Ding, Huijuan Xu, and Qi Zhang

4	Biomass synthetic fuel technology —	233
4.1	Catalytic synthesis of liquid fuel with synthesis gas —	233
4.1.1	The basic principle of liquid fuel synthesis from syngas —	235
4.1.2	Methanol synthesis from syngas —	236
4.1.2.1	Methanol synthesis process —	236
4.1.2.2	The reaction mechanism of methanol synthesis —	238
4.1.2.3	Research status of catalysts for methanol synthesis —	240
4.1.2.4	Demonstration and application of biomass gasification methanol synthesis —	241
4.1.3	Catalytic conversion of syngas to dimethyl ether —	243
4.1.3.1	Physical properties —	244
4.1.3.2	Production technologies for DME synthesis via syngas —	245
4.1.4	Catalytic conversion of syngas to mixed alcohols —	249
4.1.4.1	Thermodynamics of mixed alcohols synthesis from syngas —	249
4.1.4.2	Catalysts used for mixed alcohol synthesis —	250
4.1.4.3	Reaction mechanism of mixed alcohol synthesis —	252
4.1.4.4	Typical processes of mixed alcohol synthesis —	254

- 4.2 Biofuels synthesis via aqueous phase catalytic conversion of biomass — 258
 - 4.2.1 Mechanism of aqueous phase catalytic conversion of biomass — 260
 - 4.2.1.1 Hydrogenation of sugar into polyol — 261
 - 4.2.1.2 Alkane production via aqueous-phase catalytic conversion of biomass — 264
 - 4.2.1.3 Reactor design for aqueous conversion of sorbitol into alkane — 271
 - 4.2.2 Alkane production by aqueous-phase catalytic conversion of biomass — 272
 - 4.2.3 C8–C15 alkane production via aqueous-phase catalytic conversion of biomass — 275
 - 4.2.3.1 Aldol condensation of furfural via acetone — 278
 - 4.2.3.2 Jet fuel production from aldol condensation products — 279
 - 4.2.3.3 Catalysts applied in aldol condensation of furfural with acetone — 280
 - 4.2.4 Oxygenated liquid fuel production via aqueous-phase catalytic conversion of biomass — 280
 - 4.2.4.1 Advantages of higher chain alcohols — 280
 - 4.2.4.2 Synthesis of higher chain alcohols — 281
 - 4.2.5 Diesel synthesis from syngas — 282
 - 4.2.6 Gasoline synthesis via methanol from syngas — 283
- 4.3 Biofuel production via polymerization of low carbon number olefins — 286
 - 4.3.1 Mechanism of polymerization of low carbon number olefins — 286
 - 4.3.2 Gasoline production via polymerization of low carbon number olefins — 288
 - 4.3.3 Jet fuel production via polymerization of low carbon number olefins — 289

Changzhu Li, Wen Luo, Zhihong Xiao, Lingmei Yang, Aihua Zhang, and Pengmei Lv

5 Technologies in vegetable oil and biodiesel — 291

- 5.1 Vegetable oils fuel — 291
 - 5.1.1 Physicochemical properties of vegetable oils — 291
 - 5.1.1.1 Physical and chemical properties of vegetable oils — 292
 - 5.1.1.2 Characteristics of vegetable oil fuel — 294
 - 5.1.2 The use of vegetable oils as diesel fuel — 296
 - 5.1.2.1 Dilution of oils — 297
 - 5.1.2.2 Microemulsion of oils — 297
 - 5.1.3 Vegetable oil producing technology — 298
 - 5.1.3.1 Basic principle and process of oil leaching method — 298
 - 5.1.3.2 Basic principle of mechanical crushing method and process — 299
 - 5.1.3.3 Oil refining — 299
 - 5.1.4 Examples of rapeseed oil fuel tests — 302

5.1.4.1	German-made vegetable oil engine —	302
5.1.4.2	Contrast test of diesel and rapeseed oil —	302
5.1.5	Example of cottonseed oil-diesel blend fuel test —	303
5.1.5.1	Heating to reduce the viscosity of cottonseed oil —	303
5.1.5.2	The ratio of cottonseed oil to diesel —	304
5.1.5.3	Appraisal of cottonseed oil-diesel blend fuel —	305
5.2	Biodiesel technology —	306
5.2.1	Principle of biodiesel production —	306
5.2.1.1	Esterification —	306
5.2.1.2	Transesterification —	307
5.2.2	Technologies for biodiesel production —	309
5.2.2.1	Enzymatic transesterification methods —	309
5.2.2.2	Chemical methods —	309
5.2.2.3	Supercritical methanol method —	310
5.2.3	Processing and design for biodiesel production —	311
5.2.3.1	Process flow —	311
5.2.3.2	Catalysts —	313
5.2.3.3	Reactor —	317
5.2.3.4	Separation and purification of crude biodiesel —	321
5.2.4	Case studies for biodiesel engineering —	323
5.2.4.1	Processing technological analysis —	323
5.2.4.2	Economic analysis —	323
5.2.5	Global development of biodiesel —	326
5.2.5.1	China —	326
5.2.5.2	United States —	327
5.2.5.3	European union (EU) —	327
5.2.5.4	Other countries —	328
5.2.6	Environmental impact —	329

Dong Li, Xiaofeng Liu, Feng Zhen, and Haibin Li

6	Technologies of municipal solid waste treatment —	331
6.1	Characteristics of municipal solid waste —	331
6.1.1	Characteristics of municipal solid waste outside China —	331
6.1.2	Characteristics of domestic MSW —	331
6.1.3	Current situation of collection, transportation, and disposal of MSW in China —	334
6.1.3.1	Quantity of MSW collected and transported increases year by year —	334
6.1.3.2	Large-scale processing: An increase in processing capacity and decrease in the number of facilities —	336
6.1.3.3	Landfill-led, rapid development of incineration and a decrease in the composting ratio —	337

6.2	MSW treatment and application technology —	339
6.2.1	Sanitary landfill —	339
6.2.1.1	Reaction mechanisms in landfill process —	339
6.2.1.2	Seepage prevention at a landfill site —	340
6.2.1.3	Leachate treatment —	342
6.2.1.4	Gathering and applications of landfill gas —	344
6.2.1.5	Closure of a landfill site —	345
6.2.2	Incineration for power generation —	345
6.2.2.1	Waste incineration process —	345
6.2.2.2	Waste incinerator —	346
6.2.2.3	Process flow of waste incineration —	351
6.2.3	Aerobic compost —	352
6.2.3.1	Operating principle —	353
6.2.3.2	Raw materials and technological parameters —	355
6.2.3.3	Composting process system —	356
6.2.4	Anaerobic digestion —	358
6.2.4.1	System composition —	358
6.2.4.2	Anaerobic digestion of organic waste —	359
6.3	Cases of urban domestic waste treatment —	364
6.3.1	Liulitun Waste Sanitary Landfill, Beijing —	364
6.3.1.1	General introduction to the landfill —	364
6.3.1.2	Engineering contents of the landfill —	365
6.3.1.3	Leachate treatment —	367
6.3.2	Likeng waste incineration power plant, Guangzhou —	369
6.3.2.1	General —	369
6.3.2.2	Process flow and main equipment —	370
6.3.3	Nangong domestic waste composting plant, Beijing —	372
6.3.3.1	General —	372
6.3.3.2	Process description —	372
6.3.3.3	Cost-benefit analysis —	373
6.3.4	Heishizi anaerobic digestion plant for kitchen waste, Chongqing —	373
6.3.4.1	General —	373
6.3.4.2	Process system —	374
6.3.4.3	Product scheme —	375
6.4	Outlook for MSW —	375
6.4.1	Separate collection of MSW —	375
6.4.1.1	Classification and collection of MSW outside China —	375
6.4.1.2	Classification of China's advanced cities and collection of MSW —	377
6.4.2	Mechanical sorting technology of mixed MSW —	379
6.4.2.1	Actuality of MSW sorting technology —	379
6.4.2.2	Main equipment for sorting MSW —	379
6.4.3	Mechanical-biological treatment of MSW —	384
