Foreword	V
1 Application Concept – Horizontal and Vertical Integration	1
1.1 Benefits of MES	1
1.2 Level Structure in Manufacturing Companies	4
1.3 Horizontal and Vertical Integration	8
1.4 Work Organization and Structures with MES	10
1.5 HYDRA Module Structure	12
2 The HYDRA Concept	17
2.1 Special Conditions in Manufacturing	18
2.2 HYDRA IT Architecture	19
2.3 HYDRA System Structure	21
2.3.1 System integration services	22
2.3.2 MES Application Services	25
2.3.3 MES Operation Center (MOC)	26
2.3.4 Smart MES Application (SMA)	30
2.3.5 Enterprise Integration Services	31
2.3.6 Shopfloor Connectivity Services	32
2.3.7 Acquisition and Information Panel (AIP)	34
2.3.8 Alternative data collection functions	35
2.4 The Customized MES	37

3	HYDRA for Production Management	39
3.1	Shop Floor Data Collection (BDE)	39
3.1.1	Data collection and information.	40
3.1.2	Monitoring functions for orders and operations.	42
3.1.3	Controlling functions	46
3.1.4	Functions for production control	57
3.1.5	HYDRA BDE in overview	59
3.2	Machine Data Collection (MDE)	61
3.2.1	Configuring machines and workplaces	62
3.2.2	Monitoring machine data	64
3.2.3	Controlling: machine data.	67
3.2.4	HYDRA MDE in overview	79
3.3	HYDRA Shop Floor Scheduling (HLS)	81
3.3.1	The planning board as a central element	82
3.3.2	Individual configuration of shop floor scheduling	83
3.3.3	Detailed planning and assignment functions	85
3.3.4	Optimization	87
3.3.5	Simulation	88
3.3.6	Planning information	89
3.3.7	Evaluation of capacity utilization	91
3.3.8	HYDRA Shop Floor Scheduling in overview.	92
3.4	Material and Production Logistics (MPL)	94
3.4.1	Material and stock monitoring	94
3.4.2	Stock overviews and expiry statistics	96
3.4.3	HYDRA MPL in overview	100

3.5	Tracking and Tracing (TRT)	101
3.5.1	Batch data collection	103
3.5.2	Functions for batch tracing	105
3.5.3	Product documentation	107
3.5.4	HYDRA TRT in overview	108
3.6	Process Data Processing (PDV)	109
3.6.1	Management of master data	110
3.6.2	On-line visualization of process data	112
3.6.3	Analyses and evaluations	114
3.6.4	HYDRA PDV in overview	117
3.7	Tool and Resource Management (WRM)	118
3.7.1	Management of master data	119
3.7.2	Current information about tools and resources	121
3.7.3	Analyses, reports and archiving	123
3.7.4	Planning functions	124
3.7.5	HYDRA WRM in overview	126
3.8	Setting Data and DNC	127
3.8.1	Typical DNC workflow	127
3.8.3	Monitoring NC programs	130
	Comparison editor	130
3.8.4	Downloading / uploading NC programs	131
3.8.5	HYDRA DNC in overview	133
3.9	Energy Management (EMG)	134
3.9.1	The growing importance of energy management	134
3.9.2	Energy management with MES HYDRA	135

3.9.3	Energy data collection	136
3.9.4	Master data management	136
3.9.5	Monitoring energy data	137
3.9.6	Analyses of energy consumption	138
3.9.7	HYDRA EMG in overview	141
4	HYDRA for Human Resources Management	142
4.1	General overview	142
4.2	Time and Attendance (PZE)	144
4.2.1	Master data management	144
4.2.2	Recording personnel times and attendances.	146
4.2.3	Overviews, maintenance functions and personnel information	147
4.2.4	HYDRA PZE in overview	150
4.3	Personnel Time Management (PZW)	151
4.3.1	Evaluation of labor time data	151
4.3.2	Planning working hours and absences	155
4.3.3	Workflow for absences	157
4.3.4	Data maintenance and analyses	158
4.3.5	Labor and wage type statistics	162
	Wage type statistics	163
4.3.6	HYDRA PZW in overview	164
4.4	Personnel Scheduling (PEP)	166
4.4.1	Management functions for personnel scheduling	167
4.4.2	Determining workforce requirements and personnel assignments	168

4.4.3	Analyses for personnel scheduling	171
4.4.4	HYDRA PEP in overview	173
4.5	Incentive Wage (LLE)	174
4.5.1	Master data management	175
4.5.2	Calculation and analysis functions	175
4.5.3	Data maintenance, overviews and analyses	178
4.5.4	Bonus group evaluations	180
4.5.5	HYDRA LLE in overview	183
4.6	Access Control System (ZKS)	184
4.6.1	Management functions	185
4.6.2	Current overviews and information	188
4.6.3	Access control analyses	189
4.6.4	Special access control functions	191
4.6.5	HYDRA ZKS in overview	192
5	HYDRA for Quality Assurance	194
5.1	General Overview	194
5.2	Overarching Functions	196
5.3	In-Production Inspection (FEP)	201
5.3.1	Inspection planning for in-production inspection	201
5.3.2	Inspection data collection	203
5.3.3	Evaluation of inspection results	205
5.3.4	Outgoing goods inspection	208
5.3.5	Initial sample inspection	209
5.3.6	HYDRA FEP in overview	210
5.4	Incoming Goods Inspection (WEP)	212

- 5.4.1 Incoming goods inspection planning 213
 - 5.4.2 Evaluations 213
 - 5.4.3 HYDRA WEP in overview 215
- 5.5 Complaint Management (REK) 216
 - 5.5.1 Master data 216
 - 5.5.2 Data collection and action management 216
 - 5.5.3 Monitoring and analyses 217
 - 5.5.4 Reports and forms. 219
 - 5.5.5 HYDRA REK in overview 221
- 5.6 Test Equipment Management (PMV) 222
 - 5.6.1 Master data management 222
 - 5.6.2 Inspection planning and calibration 222
 - 5.6.3 Data evaluation and calibration planning 223
 - 5.6.4 HYDRA PMV in overview 225
- 6 Glossary 226**
- Bibliography 235**
- List of authors 236**
