

Contents

1	Basic properties of lightweight carbon materials — 1
1.1	Activated Carbon — 1
1.1.1	Physical Structure and Classification — 1
1.1.2	Chemical Properties and Functions — 6
1.1.3	The Main Detection Indexes of the AC Properties — 9
1.1.4	The Use of Activated Carbon — 11
1.2	Expanded Graphite — 13
1.2.1	Brief Introduction to Graphite — 14
1.2.2	Graphite Intercalation Compounds (GIC) — 15
1.2.3	Expanded Graphite — 16
1.2.4	Application of Expanded Graphite and Its Composites — 17
1.3	Activated Carbon Fiber — 19
1.3.1	Structure of the AC Fiber — 20
1.3.2	Performance of the Activated Carbon Fiber — 21
1.3.3	Application of the Activated Carbon Fiber — 22
1.4	Carbon Nanotubes — 24
1.4.1	Structure and Morphology of Carbon Nanotubes — 25
1.4.2	Preparation of Carbon Nanotubes — 26
1.4.3	Modification of Carbon Nanotubes — 27
1.4.4	Application of Carbon Nanotubes — 29
1.5	Graphene — 32
1.5.1	Structure of Graphene — 32
1.5.2	Preparation of GE — 33
1.5.3	Performance and Application of Graphene — 36
1.6	Adsorption Theory — 39
1.6.1	The Mass Transfer Process of Adsorption — 40
1.6.2	Physical Adsorption and Chemical Adsorption — 41
1.6.3	Adsorption Isotherms — 41
1.6.4	Factors Affecting the Adsorption — 44
1.6.5	Adsorption Equilibrium and Kinetic Theory — 45
	References — 50
2	Preparation and properties test for lightweight carbon composite materials — 52
2.1	Preparation of Lightweight Carbon Composite Material — 52
2.1.1	Direct Packing Method — 52
2.1.2	Sol–Gel Method — 54
2.1.3	Electroless Plating — 57
2.1.4	Precipitation Method — 66
2.1.5	Micro-emulsion Method — 67

2.1.6	Chemical Vapor Deposition — 67
2.2	Characterization Technology of Composite Material — 68
2.2.1	Electron Microscopy — 68
2.2.2	Thermal Analysis Technology — 70
2.2.3	Spectroscopic Technology — 72
	References — 74
3	Application of lightweight carbon material and its composite in national defense environmental protection — 75
3.1	Disposal of Unsymmetrical Dimethylhydrazine Wastewater with TiO_2 /porous Carbon and Its Composite Materials — 75
3.1.1	Preparation of TiO_2 /porous Carbon Composite Material — 77
3.1.2	Preparation of the Composite Photocatalyst — 78
3.1.3	Characterization of Composite Photocatalyst — 79
3.1.4	UDMH Wastewater Disposal Effect — 84
3.1.5	Analysis of Factors Affecting Disposal Effect of Composite Photocatalysts — 87
3.1.6	Research on the Degradation Dynamic of UDMH — 97
3.2	The Degradation of TNT by TiO_2 /ACF Composite Photocatalyst — 99
3.2.1	Preparation and Characterization of the Loaded Titanium Dioxide — 102
3.2.2	The Influence Factors of the Degradation of Composite Photocatalyst on TNT Wastewater — 103
3.2.3	The Function of Fenton Reagent for the Photocatalytic Degradation of TNT with ACF/ TiO_2 — 108
3.2.4	The Photocatalytical Degradation of TNT Wastewater with the Modified ACF/ TiO_2 — 111
3.3	The Study on the Decolorization and Adsorption of Printing and Dyeing Wastewater by the Expanded Graphite — 116
3.3.1	Preparation of the Dye Standard Solution and the Expanded Graphite — 118
3.3.2	The Decolorizing Effect of the Expanded Graphite — 120
3.3.3	The Exploration of the Decolorizing Mechanism of the Expanded Graphite — 131
3.3.4	The Fractal Analysis of the Adsorption of the Expanded Graphite for Dye — 134
3.4	Study on the Adsorption Performance of the Unsymmetric Dimethyl Hydrazine (UDMH) with the Multi-Walled Carbon Nanotubes — 138
3.4.1	The Adsorption Performance of Carbon Nanotubes on the Unsymmetric Dimethyl Hydrazine Solution — 140
3.4.2	The Impact of the Carbon Nanotubes on the UDMH Adsorption — 144

3.4.3	The Adsorption Performance of UDMH by the Modified Carbon Nanotubes — 145
3.4.4	The Dynamic Adsorption and the Desorption Properties of the Modified Multi-Walled Carbon Nanotubes on UDMH — 156
3.5	Study on the Adsorption Performance of UDMH with Activated Carbon and Modified Activated Carbon — 159
3.5.1	The Decoloring Efficiency of Different Types of Activated Carbon — 160
3.5.2	Surface Modification of the Activated Carbon — 161
3.5.3	The Adsorption Performance of the Modified Activated Carbon — 164
3.6	The Adsorption Research of UDMH with the Activated Carbon Fiber (ACF) — 173
3.6.1	The Determination of Adsorption Isotherm — 173
3.6.2	The Calculation of Adsorption Thermodynamics Function — 175
3.6.3	The Adsorption Law of UDMH with Activated Carbon Fiber — 177
	References — 177
4	Application of lightweight carbon material and composite material in electromagnetic wave absorbing material — 180
4.1	Expanded Graphite/Fe/Co/Ni Composite Materials and Their Absorbing Performance — 182
4.1.1	Production of Expanded Graphite/Fe/Co/Ni Composite Materials — 182
4.1.2	Characterization of Composite Materials — 185
4.1.3	Electromagnetic Spectrum Analysis on Magnetic Metal-Expanded Graphite Composite — 193
4.2	Expanded Graphite/Carbon Fiber/ Electroconductive and Magnetic-permeable Metal Composite Materials and Their Absorbing Performance — 205
4.2.1	Fabrication of Expanded Graphite/Carbon Fiber/ Electroconductive and Magnetic-permeable Metal Composite Materials — 206
4.2.2	Structure Characterization of Expanded Graphite/Carbon Fiber/Electroconductive and Magnetic-permeable Metal Composite Materials — 207
4.2.3	Characterization of Ag/Magnetic Metal/EG Composite Material's Magnetic Property — 211
4.2.4	Electromagnetic Spectrum of Ag/Magnetic Metal/EG Composite Material — 213

- 4.3 Chemical Plating Polyaniline/Expanded Graphite Metal Composite Materials and Their Absorbing Performance — **221**
- 4.3.1 Preparation of Polyaniline — **222**
- 4.3.2 Preparation of Polyaniline/Expanded Graphite Composite Materials — **223**
- 4.3.3 Structure and Performance Characterization of Polyaniline and Polyanilin/Expanded Graphite Composite Materials — **223**
- 4.3.4 Influencing Factors of Polyaniline Conductivity — **226**
- 4.3.5 Influencing Factors of the Conductivity of Polyaniline/Expanded Graphite Composite Materials — **229**
- 4.3.6 Electromagnetic Spectrum of Series Metal/Polyaniline/Expanded Graphite Composite Materials — **231**
- 4.4 Absorbing Coating Preparation and Its Microwave Absorbing Properties — **238**
- 4.4.1 Preparation of Absorbing Coating Material — **239**
- 4.4.2 The Coating of Paint — **241**
- 4.4.3 Microwave Absorbing Performance of Composite Absorbing Coating — **242**
- 4.5 Ultrathin Band-gap Absorbing Structure Based on Carbon Matrix Composite Material — **244**
- 4.5.1 Introduction EBG Structure and Its Application in Stealth Technology — **244**
- 4.5.2 Absorbing Theory of EBG Structure — **247**
- 4.5.3 Preparation of Carbon Matrix Composite Material — **251**
- 4.5.4 Composites of EBG Structure Design and Simulation — **267**
- 4.6 Preparation of Carbon Nanotube/Transition Metal and Oxide Composite Materials — **278**
- 4.6.1 Preparation of Carbon Nanotube/ZnO Composites — **279**
- 4.6.2 Preparation of CNTs/Cu Composites — **281**
- 4.6.3 Preparation and Characterization of CNTs/TiO₂ Composite Materials — **283**
- 4.7 Carbon Nanotubes/Magnetic Metal Composite Materials — **284**
- 4.7.1 Preparation of Laboratory Sample — **284**
- 4.7.2 Result Characterization — **285**
- 4.7.3 Optimization of Wave-Absorbing Performance — **285**
- References — **290**
