Preface — vii

Zhi Li and Qihuang Gong

1	Scanning near-field optical microscopy — 1
1.1	Fundamentals of SNOM — 2
1.1.1	Principles — 2
1.1.2	Types and operating modes — 7
1.1.3	Near-field optical probe — 14
1.1.4	Probe-sample distance control — 21
1.2	Applications of SNOM — 26
1.2.1	Near-field superresolution imaging — 26
1.2.2	Near-field spectroscopy — 35
1.2.3	Active applications of SNOM — 42
1.3	Ultrahigh time-resolved fs-SNOM — 46
1.3.1	Femtosecond time-resolved spectroscopy — 47
1.3.2	Combination of femtosecond spectroscopy and near-field optics — 49
1.3.3	Applications of femtosecond near-field microscopy — 54
1.3.3.1	Semiconductor nanostructures — 54
1.3.3.2	Metal nanostructures — 58
1.3.3.3	Femtosecond laser pulse tracking in photonic devices — 65
1.4	Summary and outlook — 68
	Bibliography — 69

Yipei Wang and Limin Tong

2	Nanofibers/nanowires and their applications in photonic components and devices — 76
2.1	Introduction — 76
2.1.1	Glass nanofibers — 77
2.1.2	Semiconductor nanowires — 80
2.1.3	Polymer nanowires — 83
2.1.4	Nonlinear optical crystal nanowires — 85
2.1.5	Metal nanowires — 87
2.2	Optical waveguiding properties — 93
2.2.1	Dielectric nanofibers/nanowires — 93
2.2.1.1	Mathematical model — 94
2.2.1.2	Propagation constants and single-mode condition — 95
2.2.1.3	Modal fields — 95
2.2.1.4	Power distributions and effective diameters — 98
2.2.1.5	Waveguide dispersion — 101

2.2.2	Metal nanowires —	101
2.2.2.1	Propagation constants —	102
2.2.2.2	Modal profiles —	103
2.2.2.3	Energy confinement —	104
2.2.2.4	Propagation loss —	105
2.3	Nanofiber/nanowire-based photonic components and devices —	106
2.3.1	Nanofiber/nanowire router/coupler —	107
2.3.2	Nanofiber/nanowire filter —	108
2.3.3	Nanofiber/nanowire Mach–Zehnder interferometer —	109
2.3.4	Nanofiber/nanowire grating —	110
2.3.5	Nanofiber/nanowire resonator —	114
2.3.6	Nanofiber/nanowire laser —	116
2.3.7	Nanofiber/nanowire sensor —	119
2.3.8	Nanofiber/nanowire photodetector —	121
2.4	Summary —	127
	Bibliography —	128

Yufei Wang and Wanhua Zheng

3	Micro/nano-optoelectronic devices based on photonic crystal —	135
3.1	Properties and applications of PC —	135
3.2	Passive photonic devices based on PC —	140
3.2.1	Integrated devices based on PC waveguides —	140
3.2.2	Magneto-optical PC devices —	141
3.2.3	PC self-collimation sensor —	143
3.3	Active optoelectronic devices based on PC —	146
3.3.1	Optically pumped PC surface-emitting laser —	146
3.3.1.1	PC-deformed H1 cavity laser —	148
3.3.1.2	PC H3 cavity laser —	149
3.3.1.3	PC triangular cavity laser —	150
3.3.2	Optically pumped PC edge-emitting laser —	151
3.3.3	Electric injection PC VCSELs —	153
3.3.3.1	Point-defect PC-VCSEL —	154
3.3.3.2	Ring-defect PC-VCSEL —	155
3.3.3.3	Petal-shaped holey VCSEL —	160
3.3.4	Electric injection lateral cavity PC surface-emitting laser (LC-PCSEL) —	163
3.3.5	PC lasers with high beam quality —	167
3.3.6	Silicon-based hybrid integrated laser —	171

3.3.7 PC semiconductor optical amplifier — 172

3.4 Summary and outlook — 173

Bibliography — 174

Index — 185
