Preface — VII

Acknowledgement — XI

Some remarks about notation — XXI

1 Fundamental notions of algebra — 1

- 1.1 Introduction — 1
- 1.2 Groups — 1
 - 1.2.1 Some examples — 2
 - 1.2.2 Abelian groups — 2
 - 1.2.3 The group commutator — 3
 - 1.2.4 Conjugate elements — 3
 - 1.2.5 Order and dimension of a group — 3
 - 1.2.6 Order of an element — 3
 - 1.2.7 The multiplication table of a finite group — 4
 - 1.2.8 Homomorphisms, isomorphisms, automorphisms — 4
 - 1.2.9 Rank, generators, relations (a first bird's-eye view) — 6
 - 1.2.10 Subgroups — 7
- 1.3 Rings — 7
- 1.4 Fields — 8
- 1.5 Vector spaces — 9
 - 1.5.1 Dual vector spaces — 10
 - 1.5.2 Inner products — 10
- 1.6 Algebras — 11
- 1.7 Lie algebras — 12
 - 1.7.1 Homomorphism — 13
 - 1.7.2 Subalgebras and ideals — 13
 - 1.7.3 Representations — 13
 - 1.7.4 Isomorphism — 13
 - 1.7.5 Adjoint representation — 13
- 1.8 Moduli and representations — 14
- 1.9 Bibliographical note — 15

2 Groups: a bestiary for beginners — 17

- 2.1 Survey of the contents of this chapter — 17
- 2.2 Groups of matrices — 17
 - 2.2.1 General linear groups — 17

2.2.2	Special linear groups — 17
2.2.3	Unitary groups — 18
2.2.4	Special unitary groups — 18
2.2.5	Orthogonal groups — 18
2.2.6	Special orthogonal groups — 19
2.2.7	Symplectic groups — 19
2.2.8	Groups of transformations — 19
2.3	Some examples of finite groups — 20
2.3.1	The permutation groups S_n — 20
2.4	Groups as the invariances of a given geometry — 22
2.4.1	The Euclidean groups — 22
2.4.2	Projective geometry — 24
2.5	Matrix groups and vector spaces — 25
2.5.1	General linear groups and basis changes in vector spaces — 25
2.5.2	Tensor product spaces — 25
2.5.3	(Anti)-symmetrized product spaces — 26
2.5.4	Exterior forms — 27
2.5.5	Special linear groups as volume-preserving transformations — 29
2.5.6	Metric-preserving changes of basis — 29
2.5.7	Isometries — 32
2.6	Bibliographical note — 33

3 Basic elements of finite group theory — 35

3.1	Introduction — 35
3.2	Basic notions and structural theorems for finite groups — 36
3.2.1	Cayley's theorem — 36
3.2.2	Left and right cosets — 37
3.2.3	Lagrange's theorem — 38
3.2.4	Conjugacy classes — 39
3.2.5	Conjugate subgroups — 41
3.2.6	Invariant subgroups — 41
3.2.7	Factor groups — 41
3.2.8	Center, centralizers, normalizers — 42
3.2.9	The derived group — 43
3.2.10	Simple, semisimple, solvable groups — 43
3.2.11	Examples of simple groups — 44
3.2.12	Homomorphism theorems — 44
3.2.13	Direct products — 45
3.2.14	Action of a group on a set — 46
3.2.15	Semi-direct products — 48
3.2.16	Extensions of a group — 50
3.2.17	Abelian groups — 51

3.3	The linear representations of finite groups —	51
3.3.1	Schur's lemmas —	53
3.3.2	Characters —	56
3.3.3	Decomposition of a representation into irreducible representations —	57
3.3.4	The regular representation —	58
3.4	Strategy to construct the irreducible representations of a solvable group —	59
3.4.1	The inductive algorithm for irreps —	60
3.4.2	A) Uplifting of self-conjugate representations —	61
3.4.2	B) Uplifting of not self-conjugate representations —	61
3.4.3	The octahedral group $O_{24} \sim S_4$ and its irreps —	62
3.5	Bibliographical note —	67
4	Finite subgroups of $SO(3)$ and crystallographic groups —	69
4.1	Introduction —	69
4.2	The ADE classification of the finite subgroups of $SU(2)$ —	70
4.2.1	The argument leading to the Diophantine equation —	71
4.2.2	Case $r = 2$: the infinite series of cyclic groups $\mathbb{A}_n$ —	75
4.2.3	Case $r = 3$ and its solutions —	76
4.2.4	Summary of the ADE classification of finite rotation groups —	79
4.3	Lattices and crystallographic groups —	81
4.3.1	Lattices —	81
4.3.2	The n -torus T^n —	82
4.3.3	Crystallographic groups and the Bravais lattices for $n = 3$ —	82
4.3.4	The proper Point Groups —	84
4.3.5	The cubic lattice and the octahedral Point Group —	84
4.3.6	Irreducible representations of the octahedral group —	85
4.4	A simple crystallographic point-group in seven dimensions —	86
4.4.1	The simple group L_{168} —	88
4.4.2	Structure of the simple group $L_{168} = PSL(2, \mathbb{Z}_7)$ —	89
4.4.3	The 7-dimensional irreducible representation —	90
4.4.4	The 3-dimensional complex representations —	93
4.4.5	The 6-dimensional representation —	94
4.4.6	The 8-dimensional representation —	95
4.4.7	The proper subgroups of L_{168} —	95
4.5	Bibliographical note —	102
5	Manifolds and Lie groups —	103
5.1	Introduction —	103
5.2	Differentiable manifolds —	104
5.2.1	Homeomorphisms and the definition of manifolds —	106

5.2.2	Functions on manifolds —	110
5.2.3	Germes of smooth functions —	112
5.3	Tangent and cotangent spaces —	113
5.3.1	Tangent vectors at a point $p \in \mathcal{M}$ —	114
5.3.2	Differential forms at a point $p \in \mathcal{M}$ —	118
5.4	About the concept of fiber-bundle —	120
5.5	The notion of Lie group —	121
5.6	Developing the notion of fiber-bundle —	122
5.7	Tangent and cotangent bundles —	128
5.7.1	Sections of a bundle —	130
5.7.2	The Lie algebra of vector fields —	132
5.7.3	The cotangent bundle and differential forms —	134
5.7.4	Differential k -forms —	136
5.8	Lie groups and Lie algebras —	138
5.8.1	The Lie algebra of a Lie group —	138
5.8.2	Maurer–Cartan forms on Lie group manifolds —	145
5.8.3	Maurer Cartan equations —	147
5.9	Matrix Lie groups —	148
5.9.1	Some properties of matrices —	148
5.9.2	Linear Lie groups —	150
5.10	Bibliographical note —	150

6	Structure of Lie algebras —	151
6.1	Introduction —	151
6.2	Homotopy, homology and cohomology —	151
6.2.1	Homotopy —	153
6.2.2	Homology —	156
6.2.3	Homology and cohomology groups: general construction —	162
6.2.4	Relation between homotopy and homology —	164
6.3	Linear algebra preliminaries —	165
6.4	Types of Lie algebras and Levi’s decomposition —	167
6.4.1	Solvable Lie algebras —	168
6.4.2	Semisimple Lie algebras —	171
6.4.3	Levi’s decomposition of Lie algebras —	171
6.4.4	An illustrative example: the Galilean group —	176
6.5	The adjoint representation and Cartan’s criteria —	177
6.5.1	Cartan’s criteria —	178
6.6	Bibliographical note —	180

7	Root systems and their classification —	181
7.1	Cartan subalgebras —	181
7.2	Root systems —	184

7.2.1	Final form of the semisimple Lie algebra —	187
7.2.2	Properties of root systems —	187
7.3	Simple roots, the Weyl group and the Cartan matrix —	190
7.4	Classification of the irreducible root systems —	192
7.4.1	Dynkin diagrams —	193
7.4.2	The classification theorem —	194
7.5	Identification of the classical Lie algebras —	200
7.5.1	The $\mathfrak{a}_\ell$ root system and the corresponding Lie algebra —	200
7.5.2	The $\mathfrak{b}_\ell$ root system and the corresponding Lie algebra —	204
7.5.3	The $\mathfrak{c}_\ell$ root system and the corresponding Lie algebra —	206
7.5.4	The $\mathfrak{d}_\ell$ root system and the corresponding Lie algebra —	207
7.5.5	The exceptional Lie algebras —	209
7.6	Bibliographical note —	209
8	Lie algebra representation theory —	211
8.1	Linear representations of a Lie algebra —	211
8.1.1	Weights of a representation and the weight lattice —	212
8.2	Discussion of tensor products and examples —	220
8.2.1	Tensor products and irreps —	221
8.2.2	The Lie algebra $\mathfrak{a}_2$, its Weyl group and examples of its representations —	225
8.2.3	The Lie algebra $\mathfrak{sp}(4, \mathbb{R}) \simeq \mathfrak{so}(2, 3)$, its fundamental representation and its Weyl group —	235
8.3	Conclusions for this chapter —	245
8.4	Bibliographical note —	245
9	Exceptional Lie algebras —	247
9.1	The exceptional Lie algebra $\mathfrak{g}_2$ —	247
9.1.1	A golden splitting for quaternionic algebras —	251
9.1.2	The golden splitting of the quaternionic algebra $\mathfrak{g}_2$ —	254
9.1.3	Chevalley–Serre basis —	257
9.2	The Lie algebra $\mathfrak{f}_4$ and its fundamental representation —	258
9.2.1	Explicit construction of the fundamental and adjoint representation of $\mathfrak{f}_4$ —	262
9.3	The exceptional Lie algebra $\mathfrak{e}_7$ —	268
9.3.1	The matrices of the fundamental 56 representation —	274
9.3.2	The $\mathfrak{sl}(8, \mathbb{R})$ subalgebra —	276
9.4	The exceptional Lie algebra $\mathfrak{e}_8$ —	277
9.4.1	Construction of the adjoint representation —	279
9.4.2	Final comments on the $\mathfrak{e}_8$ root systems —	283
9.5	Bibliographical note —	284

10	A primary on the theory of connections and metrics — 285
10.1	Introduction — 285
10.2	Connections on principal bundles: the mathematical definition — 285
10.2.1	Ehresmann connections on a principal fiber-bundle — 286
10.3	Connections on a vector bundle — 293
10.4	An illustrative example of fiber-bundle and connection — 297
10.4.1	The magnetic monopole and the Hopf fibration of S^3 — 297
10.5	Riemannian and pseudo-Riemannian metrics: the mathematical definition — 302
10.5.1	Signatures — 303
10.6	The Levi-Civita connection — 305
10.6.1	Affine connections — 305
10.6.2	Curvature and torsion of an affine connection — 306
10.7	Geodesics — 309
10.8	Geodesics in Lorentzian and Riemannian manifolds: two simple examples — 311
10.8.1	The Lorentzian example of dS_2 — 311
10.8.2	The Riemannian example of the Lobachevsky–Poincaré plane — 317
10.8.3	Another Riemannian example: the catenoid — 319
10.9	Bibliographical note — 322
11	Isometries and the geometry of coset manifolds — 323
11.1	Conceptual and historical introduction — 323
11.1.1	Symmetric spaces and Élie Cartan — 324
11.1.2	Where and how do coset manifolds come into play? — 325
11.1.3	The deep insight of supersymmetry — 326
11.2	Isometries and Killing vector fields — 326
11.3	Coset manifolds — 327
11.3.1	The geometry of coset manifolds — 332
11.4	The real sections of a complex Lie algebra and symmetric spaces — 343
11.5	The solvable group representation of non-compact coset manifolds — 346
11.5.1	The Tits–Satake projection: just a flash — 349
11.6	Bibliographical note — 349
12	An anthology of group theory physical applications — 351
12.1	Introduction — 351
12.2	The full tetrahedral group and the vibrations of XY_4 molecules — 352
12.2.1	Group theory of the full tetrahedral group — 353
12.3	The hidden symmetry of the hydrogen atom spectrum — 359
12.3.1	Classical Kepler problem — 361

- 12.3.2 Hydrogen atom — **364**
- 12.4 The AdS/CFT correspondence and (super) Lie algebra theory — **366**
- 12.4.1 Particles in anti de Sitter space and induced representations — **369**
- 12.4.2 Unitary irreducible representations of $SO(2, 3)$ — **376**
- 12.4.3 The $Osp(\mathcal{N}|4)$ superalgebra: definition, properties and notation — **380**
- 12.4.4 Structure of the $Osp(2|4)$ multiplets — **391**
- 12.5 Bibliographical note — **397**

A Exercises — 399

- A.1 Exercises for Chapter 1 — **400**
- A.2 Exercises for Chapter 2 — **401**
- A.3 Exercises for Chapter 3 — **402**
- A.4 Solutions and answers to selected problems — **408**

B MATHEMATICA NoteBooks — 441

- B.1 Introduction — **441**
- B.2 The Notebook e88construziaNew — **441**
- B.3 The Notebook g2construzia — **442**
- B.4 The Notebook e77construzia — **442**
- B.4.1 Instructions for the user — **442**
- B.5 The Notebook F44construzia.nb — **444**
- B.5.1 The $\mathfrak{f}_4$ Lie algebra — **444**
- B.5.2 Maximal compact subalgebra $\mathfrak{su}(2) \times \mathfrak{sp}(6, \mathbb{R}) \subset F_{(4,4)}$ — **445**
- B.5.3 The $\mathfrak{sl}(2, \mathbb{R}) \times \mathfrak{sp}(6, \mathbb{R})$ subalgebra and the **W**-representation — **446**
- B.6 The Notebook L168Group — **447**
- B.6.1 Description of the generated objects — **448**
- B.6.2 The basic commands of the present package — **451**
- B.7 The Notebook octagroup2 — **456**
- B.7.1 Objects and commands available to the user — **457**
- B.7.2 Auxiliary group theoretical routines used by the package but available also to the user — **458**
- B.8 The Notebook metricgrav — **459**
- B.8.1 Description of the programme — **460**
- B.8.2 Initialization and inputs to be supplied — **460**
- B.8.3 Produced outputs — **460**
- B.9 The Notebook Vielbgrav — **461**
- B.9.1 Instructions for the user — **461**
- B.10 Roots of e_8 — **461**
- B.10.1 Listing of the e_8 roots — **462**

Bibliography — 469
