Foreword — v

Acknowledgments — vii

Special foreword — ix

1 Creating success in your own scientific world — 1

1.1 The world of research and development is highly competitive — 1

**1.1.1 The academic climate has changed considerably over the
past decades — 2**

1.1.1.1 Striving for excellence — 4

1.1.1.2 Publications, awards, and other academic currency — 5

1.1.1.3 How do academic enterprises define success? — 5

1.2 Trends in governance, control, management, leadership — 7

1.2.1 Historic developments in management, governance, and control — 7

1.2.2 The scientific leader of the early 21st century — 9

1.2.2.1 Academic managers or academic leaders? — 11

1.2.2.2 Relational skills, authenticity, and charisma — 11

References — 12

**1a Guest Column: Research should be managed by motivation –
not by control — 14**

Reference — 15

2 Leading yourself and others in research — 17

2.1 Introduction — 17

2.2 Your tasks as a research leader — 17

2.3 Different ways in which people approach their work — 18

2.3.1 Balance — 20

2.3.2 Knowing yourself — 21

2.4 People's operational management dimensions — 22

2.5 Self-leadership — 24

2.6 Toward scientific leadership – a practical definition — 26

2.6.1 A working definition for academic leadership — 28

2.6.2 Some leadership styles — 28

2.7 Concluding remarks on leadership — 30

References — 30

3	Presenting science: talks, publications, posters, and some ideas on conferences — 33
3.1	Introduction: how to communicate effectively — 33
3.2	A crystal-clear message for a specific audience — 33
3.3	Writing publications — 34
3.3.1	Why do scientists publish? — 34
3.3.2	Measures for prestige: Hirsch-index and impact factor — 35
3.3.2.1	The H-index — 36
3.3.2.2	The IF (and the citation half-life) — 37
3.3.3	The basic principles: a clear message for the readers — 38
3.3.4	Stage 1 – Before you write — 40
3.3.4.1	Study the Guide for Authors — 40
3.3.4.2	The message in one sentence — 40
3.3.4.3	Cite the pertinent literature — 41
3.3.4.4	Who qualifies for authorship? — 42
3.3.4.5	Which journal to choose? — 43
3.3.4.6	Ethical obligations of authors — 43
3.3.5	Stage 2 – Writing the paper — 44
3.3.5.1	Work from a basic structure; preferably separate Results and Discussion — 44
3.3.5.2	What to do about writer’s block — 45
3.3.5.3	Attractive illustrations and tables with understandable captions tell a story — 46
3.3.5.4	Sections that often get too little attention: title, abstract, and key words — 46
3.3.6	Stage 3 – Submission of your manuscript — 47
3.3.6.1	Convince the editor to consider your paper: the submission letter — 47
3.3.7	Stage 4 – The editorial process: editors and reviewers — 48
3.3.7.1	Your paper has been received and receives a first decision — 48
3.3.7.2	Peer review — 49
3.3.7.3	Editorial decisions based on peer review — 50
3.3.7.4	Dealing with revisions — 51
3.3.8	Stage 5 – Promote your work — 51
3.3.9	In conclusion — 52
3.4	How to give successful presentations — 52
3.4.1	The attention curve – help the audience to focus on your message — 53
3.4.2	Why are audiences distracted? — 54
3.4.2.1	Mistakes you want to avoid — 54
3.4.2.2	How to organize your presentation – not as a written report! — 55
3.4.3	10 Steps to a successful presentation — 56

3.5	Posters: ideal enablers of discussion —	62
3.5.1	When is a poster successful? —	62
3.5.2	Frequently made mistakes —	63
3.5.3	10 Steps to a successful poster presentation —	63
3.6	Conferences —	65
3.6.1	Types of meetings —	65
3.6.2	Opportunities – engage! —	67
3.6.3	Finally, some sources of irritation —	68
	References —	70
3a	Guest Column: Time, money, and great ideas —	71
4	Management skills for researchers —	73
4.1	Introduction: the scientist as manager —	73
4.2	Fundraising: who will pay your research? —	73
4.2.1	How are universities and research groups funded? —	73
4.2.2	How is your research group funded? —	76
4.2.3	Writing an effective grant proposal —	76
4.3	Time management – creating quality time to think —	78
4.3.1	Priorities: urgent is not the same as important —	79
4.3.2	Personal quality time zones during the day —	79
4.3.3	The Pareto Principle: the 80/20 rule —	80
4.3.4	Avoid wasting time —	81
4.3.5	Time management of coworkers: delegate small projects instead of tasks —	82
4.3.5.1	Briefing properly is key —	82
4.3.5.2	Upward delegation —	83
4.3.6	Cultural aspects in the perception of time and the way it is spent —	83
4.3.6.1	Messy desks: effective or not? —	84
4.4	A little project management —	84
4.4.1	Definitions: projects differ from routine work —	85
4.4.2	Scope, time, and resources —	85
4.4.3	Stages in a project —	86
4.4.4	Scientists prefer agile management styles —	88
4.5	Knowledge management and capturing implicit know-how —	88
4.5.1	Document essential procedures and “lessons learned” —	89
4.6	Contact and relation management —	90
4.6.1	Relation management —	90
4.6.2	The elevator pitch: half a minute to get your message across —	91
4.7	Conflict management —	92
	References —	93

5	Planning the road to your future in science: strategy and comprehensive plans — 95
5.1	Introduction — 95
5.2	Vision — 95
5.3	Mission — 97
5.4	Goals for short-, medium-, and long-term — 98
5.4.1	Alternative views: What comes first – vision, mission, or goals? — 98
5.5	Strategy — 99
5.5.1	The playing field: explicit and implicit rules of the organization — 100
5.5.2	Strengths, weaknesses, opportunities, and threats: the SWOT analysis — 100
5.5.3	A comprehensive plan — 102
5.5.4	A procedure for assessing your research unit, your department, and your organization together with your coworkers — 104
5.6	Concluding remarks on vision, mission, and strategy — 107
	Reference — 107
6	Understanding how to build successful teams: creating synergy between people who trust each other — 109
6.1	Modern science is teamwork — 109
6.1.1	Hierarchy in teams — 110
6.2	Understanding the people you work with – we are all different — 111
6.2.1	A little psychology: the “big five” personality traits — 111
6.2.2	The Myers-Briggs types — 114
6.2.3	Personal operational and self-leadership dimensions — 114
6.2.3.1	Interaction between people based on operational personality dimensions — 115
6.3	Successful team leaders have emotional intelligence — 117
6.3.1	Emotional intelligence and emotional culture are linked — 119
6.4	The “3B” approach to authentic resources — 119
6.5	Supervision – helping students to become colleagues — 120
6.6	Concluding remarks — 122
	References — 122
6a	Guest Column: Science is the right guide for the future — 124
7	On the road to scientific (self) leadership — 125
7.1	Introduction: leadership based on authenticity and agility — 125
7.1.1	You and your (self) leadership personality — 126
7.1.2	Self-leadership rests on tangible and intangible skills and capabilities — 127

7.2	Part 1. The power of authenticity and feeling recognized – the 3Bs — 128
7.3	Part 2. A personal plan toward a successful scientific career and (self-) leadership – the 6T approach — 130
7.3.1	The risk of ignoring important dimensions or declaring them irrelevant — 132
7.3.2	The 6T Trajectory to authentic leadership, high performance, and strong impact and becoming passionate about it — 133
7.3.2.1	Strategic partnerships for enhanced impact — 136
7.3.3	Dynamic strategies — 136
7.4	Part 3. Nine elements for enhancing your capabilities – 9Es — 137
7.4.1	Toward full self-control: the management aspect — 140
7.4.2	Toward full control: the self-leadership aspects — 141
7.4.3	The duality paradox between the “I” and the “Self” — 141
7.4.3.1	Does the organization encourage authentic behavior? — 142
7.4.4	Being in control of your organization — 144
7.5	Flocks, teams, and flock leadership: leading on authenticity without losing control — 146
7.5.1	How to lead on authenticity — 146
7.5.2	Staying in control of a self-propelling organization — 147
	References — 149
8	Post scriptum – implementation — 151
8.1	How to implement self-leadership and the 3B-6T-9E enhancement philosophy in your organization — 151
8.1.1	At the level of your team — 151
8.1.2	At the level of a larger organization: the top-down approach — 152
8.1.3	Middle-up-down — 153
8.1.4	Bottom-up — 153
	Worksheets — 155
	Index — 169
