## Prologue — VI

<b>1</b>	<b>Acetylcholine — 1</b>
1.1	Goals — 1
1.2	Nerve transmission through the synapse — 1
1.3	Cholinergic nervous system: muscarinic and nicotinic receptors — 3
1.4	Direct agonist drugs — 6
1.5	Molecular modifications of AcC — 6
1.5.1	Modifications in the ammonium moiety — 7
1.5.2	Modifications of the ethylenic bridge — 7
1.5.3	Modifications of the acyloxy group — 8
1.6	Synthesis of methacholine and bethanechol — 11
1.7	Muscarinic drugs derived from other models — 11
1.8	Clinical uses of cholinergic agonists — 12
1.8.1	Muscarinic agonists — 12
1.8.2	Nicotinic agonists — 12
1.9	Muscarinic antagonists. Clinical effects — 12
1.9.1	Clinical uses — 12
1.10	Muscarinic antagonists — 12
1.10.1	Atropine — 12
1.10.2	Hyoscine — 13
1.11	Structural analogues based on atropine — 14
1.12	Main anticholinergic drugs obtained by synthesis. Structure-activity relationships — 15
1.13	M2 Antimuscarinics — 16
1.14	Antagonist drugs on nicotinic receptors — 16
1.14.1	Decamethonium and suxamethonium — 19
1.14.2	Atracurium — 19
1.15	Anticholinesterases and acetylcholinesterase — 21
1.15.1	Effect of anticholinesterases — 21
1.15.2	Acetylcholinesterase active center — 21
1.15.3	Anticholinesterase drugs — 22
<b>2</b>	<b>Noradrenaline — 30</b>
2.1	Goals — 30
2.2	Introduction — 30
2.3	Adrenergic synapses — 30
2.4	Drugs that focus on the noradrenaline biosynthesis. False transmitters — 31
2.5	Drugs that affect the release of stored noradrenaline — 33

2.6	Mechanism of action of the MAOs — 35
2.7	Adrenergic indirect drugs — 36
2.8	Catechol-O-methyltransferase inhibitors (COMT) — 40
2.9	Direct adrenergic (postsynaptic agonists) drugs — 40
2.10	Adrenergic β-blockers — 46
2.10.1	Regioselective opening of epoxides in basic media — 48
2.10.2	Regioselective opening of epoxides in acidic media — 48
2.11	α-Adrenergic blockers — 52
2.11.1	Competitive antagonists of the NA and A — 52
2.11.2	Noncompetitive antagonists of NA, especially β-haloethylamines, capable of irreversibly alkylating the receptor — 52
2.11.3	Benzodioxanes and other synthetic heterocycles. Imidazolines — 53
<b>3</b>	<b>Dopamine — 55</b>
3.1	Goals — 55
3.2	Introduction: Antiparkinsonians related to the action or release of dopamine — 55
3.2.1	Conformationally restricted analogues of dopamine — 56
3.3	Direct agonists — 57
3.4	MAO and COMT inhibitors — 59
3.5	Drugs capable of causing the release of dopamine from the peripheral neural sites at the presynaptic level — 61
3.6	Other dopaminergic agonists — 61
3.7	Dopaminergic antagonists — 63
3.7.1	Tricyclic neuroleptics: Phenothiazines and thioxanthenes — 64
3.7.2	Butyrophenones and analogues — 69
3.7.3	<i>ortho</i> -Methoxybenzamides (orthopramides) — 72
<b>4</b>	<b>Serotonin and reuptake inhibitors of biogenic amines — 74</b>
4.1	Goals — 74
4.2	Introduction — 74
4.3	Reuptake inhibitors: Tricyclic antidepressants — 74
4.4	MAO inhibitors (MAOIs) — 76
4.5	Serotonin — 77
4.6	Selective serotonin reuptake inhibitors (SSRIs) — 79
4.7	Direct action on serotonergic receptors — 79
4.7.1	5-HT <sub>1D</sub> Agonists. Antimigraine drugs — 79
4.7.2	5-HT <sub>1A</sub> Agonists — 82
4.7.3	5-HT <sub>3</sub> Antagonists — 82
4.8	Summary — 86
<b>5</b>	<b>Amino acids as neurotransmitters — 88</b>
5.1	Goals — 88

5.2	<b>Introduction — 88</b>
5.3	<b>Inhibitors of <math>\gamma</math>-aminobutyric acid (GABA) — 88</b>
5.4	<b>Presynaptic modulators — 89</b>
5.5	<b>Enzymic inhibitors that have pyridoxal phosphate as cofactor — 90</b>
5.6	<b>Postsynaptic modulators — 93</b>
5.6.1	<b>Benzodiazepines — 94</b>
5.6.2	<b>Fixation of steroids to GABA<sub>A</sub> — 102</b>
5.6.3	<b>Other drugs related to benzodiazepines — 102</b>
5.6.4	<b>Barbituric acids (or barbiturates) — 102</b>
<b>6</b>	<b>Peptides as neurotransmitters: Hypnoanalgesics — 106</b>
6.1	<b>Goals — 106</b>
6.2	<b>Morphine — 106</b>
6.2.1	<b>SARs — 107</b>
6.2.2	<b>Development of morphine analogues: Strategies — 110</b>
6.2.3	<b>Multiple analgesic receptors — 123</b>
6.2.4	<b>Agonists and antagonists — 124</b>
6.2.5	<b>Enkephalins and endorphins — 126</b>
6.2.6	<b>Enkephalin analogues — 127</b>
<b>7</b>	<b>Histamine and antihistaminics — 128</b>
7.1	<b>Goals — 128</b>
7.2	<b>Histamine — 128</b>
7.2.1	<b>H<sub>1</sub> Antihistaminics: synthesis and SARs — 130</b>
7.2.2	<b>Second-generation H<sub>1</sub> antihistaminics — 134</b>
7.3	<b>Cimetidine: Example of a rational approach in the design of a drug — 137</b>
7.3.1	<b>Beginnings: ulcer therapy in 1964 — 139</b>
7.3.2	<b>Two histaminic receptors — 140</b>
7.3.3	<b>Looking for a leader: histamine — 140</b>
7.4	<b>Searching for a leader: N<sup>α</sup>-Guanylhistamine — 141</b>
7.5	<b>The theory of chelation — 144</b>
7.6	<b>From a partial agonist to an antagonist: Development of burimamide — 146</b>
7.7	<b>Development of methiamide — 146</b>
7.8	<b>Cimetidine development — 149</b>
7.8.1	<b>Cimetidine metabolism — 151</b>
7.8.2	<b>Cimetidine synthesis — 152</b>
7.8.3	<b>Conformational isomers of cimetidine — 153</b>
7.8.4	<b>Desolvation — 154</b>
7.8.5	<b>Development of the ketenaminal (or diaminonitroethylene) group — 155</b>
7.9	<b>Cimetidine development — 159</b>

7.10	Summary of cimetidine design — 160
7.11	Comparison between H <sub>1</sub> and H <sub>2</sub> antagonists — 160
<b>8</b>	<b>Enzymatic inhibitors I — 162</b>
8.1	Goals — 162
8.2	Introduction — 162
8.3	Carbonic anhydrase (CA) inhibitors — 162
8.4	Renin-angiotensin pathway — 165
8.4.1	Angiotensin II antagonists. X-ray crystallographic studies — 167
<b>9</b>	<b>Enzymatic inhibitors II — 172</b>
9.1	Goals — 172
9.2	Introduction — 172
9.3	Classification of nonsteroidal anti-inflammatory drugs (NSAIDs) — 175
9.3.1	Arylacetic acids or “fenacs” — 176
9.3.2	Arylpropionic acids or “profens” — 178
9.3.3	Naproxen — 179
9.3.4	N-Arylanthranilic (fenamic) acids — 180
9.3.5	Enols (oxicams) — 181
9.3.6	COX-2 selective inhibitors: Coxibs — 182
<b>10</b>	<b>Design of drugs acting on transport through biological membranes — 184</b>
10.1	Goals — 184
10.2	Design of drugs that act on transport through cell membranes — 184
10.3	Voltage-gated sodium channels — 184
10.3.1	Local anesthetics — 187
10.4	Voltage-dependent calcium channels — 191
10.4.1	Calcium channel blockers: Structural families — 191
10.4.2	H <sup>+</sup> /K <sup>+</sup> -ATPase inhibitors: Antiulcer drugs — 193
<b>11</b>	<b>Enzymatic inhibition: Inhibitors of the biosynthesis of the cellular wall — 196</b>
11.1	Goals — 196
11.2	Antibiotics — 196
11.3	Penicillins — 196
11.3.1	Structure of penicillins — 197
11.3.2	Various penicillins — 197
11.3.3	Properties of penicillin G — 198
11.3.4	Structure-activity relationships of penicillins — 199
11.3.5	Sensitivity of penicillin G to acids — 199
11.3.6	Penicillins sensitive to β-lactamases — 202
11.3.7	Facing the problem of β-lactamase sensitivity — 203
11.3.8	Resistance to penicillins — 204

11.3.9	Addressing the narrow-spectrum problem — 206
11.4	Cephalosporins — 208
11.4.1	SARs of cephalosporin C — 210
11.4.2	Cephalosporin C analogues by variation of the 7-acylamine side chain — 211
11.4.3	Cephalosporin C analogues by variation of the 3-acetoxymethyl side chain — 212
11.4.4	Synthesis of 3-methylated cephalosporins — 213
11.4.5	Disclaimer — 214
11.4.6	Summary of the properties of cephalosporins — 214
11.5	Clavulanic acid (Beechams, 1976) — 215
11.6	Mechanism of action of penicillins and cephalosporins — 217
<b>12</b>	<b>Enzymatic inhibition: Other antibacterial agents — 221</b>
12.1	Goals — 221
12.2	Introduction — 221
12.3	SARs — 222
12.4	Sulfanilamide analogues — 222
12.5	Applications of sulfonamides — 223
12.6	Mechanism of action — 224
12.7	Synthesis of sulfonamides — 226
12.8	Examples of other antimetabolites — 226
12.8.1	Trimethoprim — 227
12.9	Antibacterial agents affecting protein synthesis — 228
12.9.1	Rifamycins — 229
12.9.2	Aminoglycosides — 229
12.9.3	Tetracyclines — 230
12.9.4	Chloramphenicol — 230
12.9.5	Erythromycin — 232
12.9.6	Aminoacridines — 232
12.9.7	1,8-Naphthyridine and fluoroquinolones — 234
<b>13</b>	<b>Enzymatic inhibition: Inhibitors of biosynthesis of nitrogenated bases — 238</b>
13.1	Goals — 238
13.2	Introduction — 238
13.3	Nucleic acids — 238
13.4	Thymidylate synthase inhibitors — 238
13.4.1	Tetrahydrofolic acid — 240
13.4.2	5-Fluorouracil (5-FU) — 241
13.5	DHFR inhibitors — 245
13.6	Tyrosine kinase inhibitors — 245
13.6.1	Structure of tyrosine kinase receptors — 248

- 13.6.2      Mechanisms of activation of the EGF receptor tyrosine kinase — 248**
- 13.6.3      Example of a kinase inhibitor for clinical use (gefitinib) — 249**
- 13.7          Antivirals — 252**
- 13.7.1        Antiviral inhibitors of DNA polymerases and other enzymes — 252**

**Index — 257**
