Preface — v

List of contributing authors — xiii

Part I: High-technology materials

1	Lithium ion-conducting oxide garnets — 3
1.1	Introduction — 3
1.2	Crystal structure of garnets — 4
1.3	Natural and synthetic garnets — 6
1.3.1	Natural garnets — 6
1.3.2	Synthetic garnets — 7
1.4	Solid Li-ion conductors — 8
1.5	Introduction on Li-oxide garnets — 8
1.5.1	Structural features of Li-oxide garnets — 9
1.6	Systematic of Li-oxide garnets — 11
1.6.1	$\text{Li}_3\text{Ln}_3\text{M}^{6+}_2\text{O}_{12}$ ($\text{Ln} = \text{Y}, \text{Pr}, \text{Nd}, \text{Sm-Lu}$; $\text{M}^{6+} = \text{Te}^{6+}, \text{W}^{6+}$) (Li_3 phases) — 11
1.6.2	$\text{Li}_5\text{La}_3\text{M}^{5+}_2\text{O}_{12}$ ($\text{M}^{5+} = \text{Nb}^{5+}, \text{Ta}^{5+}, \text{Sb}^{5+}, \text{Bi}^{5+}$) (Li_5 phases) — 11
1.6.3	$\text{Li}_6\text{A}^{2+}\text{La}_2\text{M}^{5+}_2\text{O}_{12}$ ($\text{A}^{2+} = \text{Mg}^{2+}, \text{Ca}^{2+}, \text{Sr}^{2+}, \text{Ba}^{2+}$; $\text{M}^{5+} = \text{Nb}^{5+}, \text{Ta}^{5+}$) (Li_6 phases) — 12
1.6.4	$\text{Li}_7\text{La}_3\text{M}^{4+}_2\text{O}_{12}$ ($\text{M}^{4+} = \text{Zr}^{4+}, \text{Hf}^{4+}, \text{Sn}^{4+}$) (Li_7 phases) — 12
1.6.5	Li-oxide garnets with space group $\bar{1}43d$ — 14
1.7	Outlook — 16
1.8	Conclusions — 16
Acknowledgments — 16	
References — 16	
2	Olivine-type battery materials — 23
2.1	Introduction — 23
2.2	Olivine in nature — 23
2.3	LiFePO_4 olivine — 27
2.3.1	Synthesis — 27
2.3.2	Impurities and defects — 27
2.3.3	Electrochemical properties — 29
2.3.4	Carbon coating — 31
2.3.5	Aging — 32
2.4	Other Li-based olivines — 34
2.4.1	$\text{Li}(\text{Mn}, \text{Fe})\text{PO}_4$ olivines — 34
2.4.2	LiCoPO_4 and LiNiPO_4 olivines — 35

2.5	Battery of the future: olivine-based Na-ion cells —	35
2.6	Conclusion —	37
References —		37

3 Natural and synthetic zeolites — 41

3.1	History and definitions —	41
3.2	The zeolite structure —	44
3.3	Natural occurrence of zeolites —	47
3.3.1	Structural variability of the aluminosilicate zeolites —	48
3.3.2	Compositional variability of the framework —	48
3.3.3	Compositional variability of the cations occupying the pore volume —	49
3.4	Applications —	49
3.4.1	Ion exchange —	50
3.4.2	Adsorption —	50
3.4.3	Catalysis —	51
3.5	Synthesis of zeolites —	52
3.6	Recent developments —	53
3.6.1	Synthesis of zeolite materials —	53
3.6.2	Applications —	61
3.7	Outlook —	66
References —		67

4 Microstructure analysis of chalcopyrite-type CuInSe_2 and kesterite-type $\text{Cu}_2\text{ZnSnSe}_4$ absorber layers in thin film solar cells — 73

4.1	Introduction —	73
4.2	Experimental —	77
4.2.1	Depth-resolved grazing incidence X-ray diffraction —	77
4.2.2	Microstructure analysis —	78
4.3	Summary —	95
References —		96

5 Surface-engineered silica via plasma polymer deposition — 99

5.1	Plasma polymerization —	99
5.2	Polymer plasma synthesis of amine-functionalized silica particles —	100
5.3	Polymer plasma synthesis of sulfonate-functionalized silica particles —	103
5.4	Plasma polymer synthesis of hydrophobic films on silica particles —	107
References —		110

6	Crystallographic symmetry analysis in NiTi shape memory alloys — 113
6.1	Introduction — 113
6.2	Elementary Landau theory — 115
6.3	M-point transverse distortion modes — 123
6.4	Γ -point strain distortion modes — 125
6.5	Mode coupling and invariants in Landau free-energy polynomial — 126
6.6	Model of biquadratic order parameter coupling — 128
	Acknowledgment — 132
	References — 133

Part II: Environmental mineralogy

7	Gold, silver, and copper in the geosphere and anthroposphere: can industrial wastewater act as an anthropogenic resource? — 137
7.1	Introduction — 137
7.2	Gold, silver, and copper in the geosphere — 138
7.2.1	Gold (Au) — 138
7.2.2	Silver (Ag) — 139
7.2.3	Copper (Cu) — 139
7.3	Gold, silver, and copper in the anthroposphere — 140
7.3.1	Synthesis of gold, silver, and copper phases from aqueous solutions — 140
7.3.2	Wastewater: an anthropogenic resource for gold, silver, and copper? — 144
7.4	What do/did we learn? — 146
	Acknowledgments — 147
	References — 147
8	Applied mineralogy for recovery from the accident of Fukushima Daiichi Nuclear Power Station — 153
8.1	Introduction — 153
8.2	Mineralogical issues on- and off-site of the FDNPS — 154
8.2.1	On-site — 154
8.2.2	Off-site — 157
8.3	Case studies — 159
8.3.1	Selection of adsorbents and processes for water treatment on site — 159
8.3.2	Solidification of the spent adsorbents for safe and economical storage and disposal — 161

8.3.3 Identification of the host mineral for Cs retention
in off-site soils — 163

8.4 Concluding remark — 167

Acknowledgment — 167

References — 167

9 Phosphates as safe containers for radionuclides — 171

9.1 Introduction — 171

9.2 Nuclear waste management — 171

9.3 Why single-phase phosphate ceramics? — 172

9.4 Crystal structures and properties — 174

9.4.1 Monazite type — 174

9.4.2 Apatite type — 175

9.4.3 Xenotime type — 176

9.4.4 Kosnarite type — 177

9.4.5 Florencite type — 179

9.4.6 Th-phosphate-diphosphate (β -TPD) type — 180

9.4.7 Specific structural features of monazite — 181

9.5 Chemical thermodynamics of single phases and solid solutions — 185

9.6 Computer simulations as a valuable supplement to
experimental results — 187

9.7 Summary — 189

References — 190

10 Immobilization of high-level waste calcine (radwaste) in perovskites — 197

10.1 Introduction — 197

10.2 Immobilization of radioactive waste in ceramics — 198

10.2.1 Supercalcine ceramic — 198

10.2.2 Applications and phase assemblages of synroc ceramics — 199

10.3 Crystal chemistry of perovskite-type structures suitable for
the fixation of radwaste — 203

10.3.1 Perovskite minerals and their technical analogues — 203

10.3.2 Artificial ternary actinide perovskites — 212

10.4 Discussion and summary — 214

References — 215

11 Titanate ceramics for high-level nuclear waste immobilization — 223

11.1 Introduction — 223

11.2 Multibarrier repository — 224

11.3 Design and fabrication of titanate ceramics — 225

11.4 Radiation resistance — 229

11.5	Durability of titanate ceramics —	232
11.6	Atomistic modeling —	233
11.7	Conclusions —	237
References —		237

Part III: Biomineralization, biomimetics, and medical mineralogy

12	Patterns of mineral organization in carbonate biological hard materials —	245
12.1	Introduction —	245
12.2	Composite nature of biological hard tissues —	245
12.3	Characteristic basic mineral units in gastropod, bivalve, and brachiopod shells —	248
12.4	Carbonate hard tissue microstructures and textures, difference in crystal co-orientation strength —	252
12.5	Biomaterial functionalization through carbonate crystal orientation variation —	260
12.5.1	Calcitic tooth of the sea urchin <i>P. lividus</i> —	261
12.5.2	Shells of <i>H. ovina</i> and <i>M. edulis</i> —	262
12.5.3	Calcite in the tergite and mandible exocuticula of the isopod species <i>Porcellio scaber</i> and <i>Tylos europaeus</i> —	262
12.6	Concluding summary —	264
Acknowledgments —		267
References —		267
13	Sea urchin spines as role models for biological design and integrative structures —	273
13.1	Introduction —	273
13.2	Properties related to composition and nanostructure —	274
13.3	Properties related to design —	276
13.4	Biomimetic materials for energy dissipation —	280
13.5	Conclusions and outlook —	281
Acknowledgments —		282
References —		282
14	Nacre: a biomineral, a natural biomaterial, and a source of bio-inspiration —	285
14.1	Introduction —	285
14.2	Nacre: a biomineral —	285
14.2.1	Composition of nacre —	285
14.2.2	Multiscale structure of an iridescent biomineral —	286

14.2.3	Nacre tablet formation —	287
14.3	Nacre: a natural biomaterial —	287
14.3.1	Nacre implant —	288
14.3.2	Nacre powder —	289
14.4	Nacre: a source of bio-inspiration for new materials —	289
14.4.1	Layered structure —	290
14.4.2	Interfacial/interlocking structure —	294
14.4.3	Innovative methods —	294
14.5	Conclusion —	298
	References —	298

15 Hydroxylapatite coatings: applied mineralogy research in the bioceramics field — 301

15.1	Introduction —	301
15.2	Geological HAp vs. biological HAp —	301
15.2.1	Structure of geological HAp —	302
15.2.2	Structure of biological apatite —	302
15.2.3	Biocompatibility of bioceramics —	303
15.2.4	Work in the area of bioceramics —	304
15.2.5	Outlook on future developments and further research requirements —	311

References — 313

16 A procedure to apply spectroscopic techniques in the investigation of silica-bearing industrial materials — 317

16.1	Introduction —	317
16.2	Activating factors in industrial CS-bearing materials: examples —	319
16.2.1	Size distribution —	319
16.2.2	Speciation of inorganic radicals —	320
16.2.3	Chemical and mineralogical contamination —	322
16.2.4	Species selection in suspended dusts —	324
16.3	Procedure: sampling and investigation techniques —	325
16.4	Conclusions —	328

Acknowledgments — 328

References — 329

About the authors — 333

Index — 339
