

Contents

Preface — v

1 Introduction — 1

- 1.1 Colloidal dispersions — 1
- 1.2 Self-assembly systems — 3
- 1.3 Interfacial phenomena — 5
- 1.4 Outline of the book — 6

2 Origin of charge at interfaces and structure of the electrical double layer — 15

- 2.1 Introduction — 15
- 2.2 Origin of charge on surfaces — 15
 - 2.2.1 Surface ions — 15
 - 2.2.2 Ionization of surface groups — 16
 - 2.2.3 Isomorphic substitution — 17
 - 2.2.4 Specific adsorption of ions — 19
- 2.3 Structure of the electrical double layer — 19
 - 2.3.1 Diffuse double layer (Gouy and Chapman) — 19
 - 2.3.2 Stern–Grahame model of the double layer — 24
 - 2.3.3 Capacitance of the double layer — 27
- 2.4 Double layer investigation — 28

3 Electrokinetic phenomena and zeta potential — 37

- 3.1 Introduction — 37
- 3.2 Charge separation at interfaces and various electrokinetic effects — 37
 - 3.2.1 Electrophoresis — 39
 - 3.2.2 Electro-osmosis — 39
 - 3.2.3 Streaming potential — 40
 - 3.2.4 Sedimentation potential (Dorn effect) — 40
- 3.3 The surface of shear and the zeta potential — 40
- 3.4 Relationship between zeta potential and potential distribution across the interface — 41
- 3.5 Calculation of zeta potential from particle mobility — 44
 - 3.5.1 Von Smoluchowski (classical) treatment — 44
 - 3.5.2 The Huckel equation — 47
 - 3.5.3 Henry's treatment — 48
- 3.6 Measurement of electrophoretic mobility and zeta potential — 49
 - 3.6.1 Ultramicroscopic technique (microelectrophoresis) — 49
 - 3.6.2 Laser velocimetry technique — 52
 - 3.6.3 Electroacoustic methods — 55

4	Double layer repulsion — 63
4.1	Introduction — 63
4.2	General expression for electrostatic repulsion — 63
4.3	Interaction between similar and dissimilar flat plates — 65
4.4	Calculation of electrostatic interaction using the Gibbs energy concept — 67
4.5	Charge and potential distribution — 69
4.6	Interaction between spherical particles — 72
4.7	Effect of increasing electrolyte concentration, valency of counterions and Stern potential — 75
4.8	Effect of particle concentration — 77
5	Van der Waals attraction — 81
5.1	Introduction — 81
5.2	General expression for the interaction between two particles — 81
5.3	Intermolecular attraction between atoms or molecules — 82
5.3.1	Dipole-dipole interaction (Keesom–van der Waals interaction) — 82
5.3.2	Dipole-induced dipole interaction (Debye–van der Waals interaction) — 83
5.3.3	London–van der Waals interaction (dispersion interaction) — 83
5.4	General approach for van der Waals attraction — 84
5.5	Hydrogen bonding — 85
5.6	Hydrophobic (bonding) interaction — 85
5.7	Van der Waals attraction of macroscopic bodies — 86
5.7.1	The microscopic approach for van der Waals attraction — 86
5.7.2	Medium effect on van der Waals attraction — 90
5.7.3	Macroscopic approach (Lifshitz theory of dispersion forces) — 92
5.8	Retardation effect — 94
5.9	Direct measurement of van der Waals attraction between macroscopic bodies — 94
6	Theory of colloid stability — 97
6.1	Introduction — 97
6.2	Examples of potential energy curves and stability of charge stabilized systems as described by the DLVO theory for flat plates — 98
6.3	Energy–distance curves for spherical particles according to DLVO theory — 101
6.3.1	Large particles with thin double layers ($\kappa a \gg 1$) — 102
6.3.2	Small particles and extended double layers (κa is small) — 105
6.3.3	Total energy of interaction — 108
6.4	Influence of particle number concentration — 109

7	Flocculation of colloidal dispersions — 117
7.1	Mechanism of aggregation — 117
7.2	Kinetics of flocculation of dispersions — 119
7.2.1	Diffusion limited aggregation (fast flocculation kinetics) — 119
7.2.2	Potential limited aggregation (slow flocculation kinetics) — 120
7.2.3	Weak (reversible) flocculation — 121
7.2.4	Orthokinetic flocculation — 122
7.2.5	Aggregate structure — 126
8	Association colloids — 129
8.1	Introduction — 129
8.2	General classification of surfactants — 129
8.2.1	Anionic surfactants — 129
8.2.2	Cationic surfactants — 134
8.2.3	Amphoteric (zwitterionic) surfactants — 135
8.2.4	Nonionic surfactants — 136
8.3	Aggregation of surfactants, self-assembly structures, liquid crystalline phases — 141
8.4	Thermodynamics of micellization — 148
8.4.1	Kinetic aspects — 148
8.5	Equilibrium aspects: thermodynamics of micellization — 149
8.6	Enthalpy and entropy of micellization — 151
8.7	Driving force for micelle formation — 152
8.8	Micellization in surfactant mixtures (mixed micelles) — 153
8.9	Surfactant self-assembly — 157
8.10	Structure of liquid crystalline phases — 157
8.10.1	Hexagonal phase — 158
8.10.2	Micellar cubic phase — 158
8.10.3	Lamellar phase — 158
8.10.4	Bicontinuous cubic phases — 159
8.10.5	Reversed structures — 159
8.11	Experimental studies of the phase behaviour of surfactants — 159
9	Adsorption of surfactants at the liquid/liquid interface — 163
9.1	Introduction — 163
9.2	Surfactant adsorption — 164
9.2.1	The Gibbs adsorption isotherm — 165
9.2.2	Equation of state approach — 168
9.2.3	The Langmuir, Szyszkowski and Frumkin equations — 170
9.3	Effectiveness of surfactant adsorption at the liquid/liquid interface — 171

9.4	Efficiency of adsorption of surfactant at the liquid/liquid interface —	171
9.5	Adsorption from mixtures of two surfactants —	173
9.6	Interfacial tension measurements —	174
9.6.1	The Wilhelmy plate method —	174
9.6.2	The pendent drop method —	175
9.6.3	The du Nouy ring method —	176
9.6.4	The drop volume (weight) method —	176
9.6.5	The spinning drop method —	177
9.7	Interfacial rheology —	178
9.7.1	Interfacial shear viscosity —	178
9.7.2	Measurement of interfacial viscosity —	178
9.7.3	Interfacial dilational elasticity —	179
9.7.4	Interfacial dilational viscosity —	179
9.7.5	Non-Newtonian effects —	180
9.8	Correlation of emulsion stability with interfacial rheology —	180
9.8.1	Mixed surfactant films —	180
9.8.2	Protein films —	181
10	Adsorption of surfactants at the solid/liquid interface —	185
10.1	Introduction —	185
10.2	Adsorption of ionic surfactants on hydrophobic surfaces —	187
10.3	Examples of adsorption isotherms for ionic surfactants on hydrophobic surfaces —	191
10.4	Adsorption of ionic surfactants on polar surfaces —	193
10.5	Adsorption of nonionic surfactants —	194
10.6	Theoretical treatment of surfactant adsorption —	197
10.7	Examples of typical adsorption isotherms of model nonionic surfactants on hydrophobic solids —	199
11	Polymers and polymeric surfactants and their association —	203
11.1	Introduction —	203
11.2	General classification of polymers and polymeric surfactants —	203
11.2.1	Homopolymers —	203
11.2.2	Random copolymers —	204
11.2.3	Block and graft copolymers —	204
11.2.4	Polymeric surfactants based on polysaccharides —	206
11.2.5	Natural polymeric biosurfactants —	210
11.2.6	Silicone surfactants —	211
11.2.7	Polymeric surfactants for nonaqueous dispersions —	212
11.2.8	Polymerizable surfactants —	214

11.3	Solution properties of polymeric surfactants —	215
11.3.1	Polymer conformation and structure —	215
11.3.2	Free energy of mixing of polymer with solvent – the Flory–Huggins theory —	220
11.3.3	Viscosity measurements for characterization of a polymer in solution —	225
11.3.4	Phase separation of polymer solutions —	227
11.3.5	Solubility parameter concept for selecting the right solvent for a polymer —	228
12	Adsorption and conformation of polymeric surfactants at interfaces —	231
12.1	Introduction —	231
12.2	Polymers at interfaces —	232
12.3	Theories of polymer adsorption —	236
12.4	Scaling theory for polymer adsorption —	244
12.5	Experimental techniques for studying polymeric surfactant adsorption —	246
12.5.1	Measurement of the adsorption isotherm —	246
12.5.2	Measurement of the fraction of segments p —	247
12.5.3	Determination of the segment density distribution $\rho(z)$ and adsorbed layer thickness δ_h —	247
12.6	Examples of the adsorption isotherms of nonionic polymeric surfactants —	251
12.7	Adsorbed layer thickness results —	254
12.8	Kinetics of polymer adsorption —	257
13	Steric stabilization —	259
13.1	Introduction —	259
13.2	Interaction between particles or droplets containing adsorbed polymer layers —	259
13.2.1	Mixing interaction G_{mix} —	260
13.2.2	Elastic interaction G_{el} —	262
13.2.3	Total energy of interaction —	263
13.2.4	Criteria for effective steric stabilization —	264
13.3	Measurement of steric repulsion between adsorbed layers of polymeric surfactants —	264
13.3.1	Surface force methods —	264
13.3.2	Atomic Force Microscopy (AFM) measurements —	267
14	Flocculation of sterically stabilized dispersions —	273
14.1	Introduction —	273
14.2	weak (reversible) flocculation —	273

14.3	Incipient flocculation — 277
14.4	Depletion flocculation — 279
14.5	Bridging flocculation by polymers and polyelectrolytes — 280

Index — 285
