

Table of Contents

Inhaltsverzeichnis

Formula Symbols and Abbreviations	V
1 Introduction	1
2 State of the Art.....	5
2.1 Fundamentals of Turning Difficult-to-Cut Materials	6
2.1.1 Machinability of Titanium Alloys	7
2.1.2 Machinability of Nickel-Based Alloys.....	8
2.1.3 Machinability of Stainless Steels.....	10
2.1.4 Coolant Supply Strategies in Cutting Technology	12
2.2 Application of High-Pressure Coolant Supply in Metal Cutting	14
2.2.1 Operating Principle and Acting Mechanisms	15
2.2.2 Tooling and Machinery.....	21
2.3 Potential of High-Pressure Coolant Supply	23
2.4 Influence of High-Pressure Coolant Supply on Surface Integrity	30
2.5 Interim Conclusion and Research Demands	34
3 Objective, Approach and Research Concept.....	37
4 System Analysis and Concept of an Explanation Model	41
4.1 Definition of the System Boundary	42
4.2 Approach for Development of an Explanation Model	43
4.3 Definition and Classification of Surface Anomalies	44
4.4 Identification of Relevant Influencing Parameters	47
4.5 Interim Conclusion for the Theoretical Approach	48
5 Empirical Analysis of Cause-and-Effect Relationships	49
5.1 Experimental Set-Up	49
5.1.1 Material and Tool Characterisation	49
5.1.2 Process Conditions and Measuring Equipment	54

5.2	Empirical Investigation of Primary Surface Anomalies	57
5.2.1	Influence of Coolant Parameters on Thermal Tool Load	59
5.2.2	Influence of Tool Geometry and Supply Variant on Thermal Tool Load	62
5.2.3	Influence of Coolant Parameters on Mechanical Tool Load	64
5.2.4	Influence of Coolant Parameters on Tool Wear	68
5.2.5	Influence of Jet Guidance Geometries on Tool Wear	73
5.2.6	Influence of Coolant Parameters on Surface Quality	74
5.2.7	Interim Conclusion for Primary Surface Anomalies	76
5.3	Empirical Investigation of Secondary Surface Anomalies	77
5.3.1	Fluid Technical Analysis of High-Pressure Coolant Supply	78
5.3.2	Simulation of Chip Formation with High-Pressure Coolant Supply	86
5.3.3	Chip Breakage Mechanisms in High-Pressure Coolant Supply	90
5.3.4	Kinetic Energy of Coolant Jet for Efficient Chip Breaking	100
5.3.5	Interim Conclusion for Secondary Surface Anomalies	101
5.4	Empirical Investigation of Tertiary Surface Anomalies	103
5.4.1	Identification of Impact Mechanisms during Chip Collision	106
5.4.2	Energy Balance of the System Chip and Workpiece	108
5.4.3	Identification of the Deformation Energy transferred to the Workpiece ...	110
5.4.4	Influence of Impact Parameters on Surface Quality	116
5.4.5	Intensity Assessment of Tertiary Surface Anomalies	121
5.4.6	Interim Conclusion for Tertiary Surface Anomalies	123
5.5	Interim Conclusion for Empirical Investigations	124
6	Explanation Model for Occurrence of Surface Anomalies	125
6.1	Derivation of an Explanation Model for Surface Anomalies	125
6.2	Anomaly-free Machining with High-Pressure Coolant Supply	128
7	Application of the Explanation Model	133
7.1	Case Study: External Longitudinal Turning of Ti6246	133
7.2	Innovative Approach of Pulsating High-Pressure Coolant Supply	138
7.3	Summary and Interim Conclusion	141
8	Summary, Discussion and Outlook	143
	Zusammenfassung, Diskussion und Ausblick	147
9	References	151

10 Appendix 167

10.1 Technical Sketch of Sidewalls (Chapter 5.4)..... 167

10.2 Technical Sketch of the Blasting Head / Injector (Chapter 5.4) 168

10.3 Technical Sketch of the Nozzle (Chapter 5.4) 169

10.4 Technical Sketch of the Unit for Fixing of the Nozzle (Chapter 5.4) 169

10.5 Technical Sketch of the Focussing Unit (Chapter 5.4) 170

Curriculum Vitae 171
