

Contents

1 Introduction — 1

- 1.1 The research significance of the BE technology — 1**
- 1.2 The application of BE technology — 3**
 - 1.2.1 The application in digital television — 3**
 - 1.2.2 The application in CATV system — 3**
 - 1.2.3 The application in smart antenna — 4**
 - 1.2.4 The application in software radio — 4**
 - 1.2.5 The application in blind image restoration — 5**
 - 1.2.6 The application in radiofrequency identification — 5**
- 1.3 The research progress of neural network BE algorithm — 6**
 - 1.3.1 The FFNN BE algorithm — 6**
 - 1.3.2 The BE algorithm based on FBNN — 10**
 - 1.3.3 The FNN BE algorithm — 11**
 - 1.3.4 The ENN BE algorithm — 13**
 - 1.3.5 BE algorithm based on WNN — 14**
- 1.4 The research background and structure — 14**
 - 1.4.1 The research background — 14**
 - 1.4.2 The structure of the book — 15**

2 The Fundamental Theory of Neural Network Blind Equalization Algorithm — 17

- 2.1 The fundamental principle of blind equalization — 17**
 - 2.1.1 The concept of blind equalization — 17**
 - 2.1.2 The structure of blind equalizer — 18**
 - 2.1.3 The basic algorithm of blind equalization — 19**
 - 2.1.4 The equalization criteria of blind equalization — 22**
- 2.2 The fundamental theory of neural network — 27**
 - 2.2.1 The concept of artificial neural network — 27**
 - 2.2.2 The development of ANN — 28**
 - 2.2.3 The characteristics of ANN — 29**
 - 2.2.4 Structure and classification of ANN — 30**
- 2.3 The fundamental principle of neural network blind equalization algorithm — 32**
 - 2.3.1 The principle of blind equalization algorithm based on neural network filter — 32**
 - 2.3.2 The principle of blind equalization algorithm based on neural network controller — 32**
 - 2.3.3 The principle of blind equalization algorithm based on neural network controller classifier — 33**

2.4	The learning method of neural network blind equalization algorithm — 34
2.4.1	The BP algorithm — 34
2.4.2	The improved BP algorithm — 36
2.5	The evaluation index of the neural network blind equalization algorithm — 42
2.5.1	Convergence speed — 43
2.5.2	The computational complexity — 43
2.5.3	The bit error characteristics — 43
2.5.4	The ability of tracking the time-varying channel — 43
2.5.5	The ability of anti interference — 43
2.5.6	The convexity of the cost function — 44
2.5.7	The steady-state residual error — 45
2.6	Summary — 50
3	Research of Blind Equalization Algorithms Based on FFNN — 51
3.1	Basic principles of FFNN — 51
3.1.1	Concept of FFNN — 51
3.1.2	Structure of FFNN — 51
3.1.3	Characteristics of FFNN — 52
3.2	Blind equalization algorithm based on the three-layer FFNN — 52
3.2.1	Model of the three-layer FFNN — 52
3.2.2	Real blind equalization algorithm based on the three-layer FFNN — 53
3.2.3	Complex blind equalization algorithm based on the three-layer FFNN — 56
3.3	Blind equalization algorithm based on the multilayer FFNN — 63
3.3.1	Concept of the multilayer FFNN — 63
3.3.2	Blind equalization algorithm based on the four-layer FFNN — 64
3.3.3	Blind equalization algorithm based on the five-layer FFNN — 70
3.4	Blind equalization algorithm based on the momentum term FFNN — 78
3.4.1	Basic principles of algorithm — 78
3.4.2	Derivation of algorithm — 80
3.4.3	Computer simulation results — 82
3.5	Blind equalization algorithm based on the time-varying momentum term FFNN — 84
3.5.1	Basic principles of algorithm — 84
3.5.2	Derivation of algorithm — 86
3.5.3	Computer simulation results — 87
3.6	Blind equalization algorithm based on variable step-size FFNN — 88
3.6.1	Basic principles of algorithm — 88
3.6.2	Derivation of algorithm — 90
3.6.3	Computer simulation results — 91
3.7	Summary — 92

4	Research of Blind Equalization Algorithms Based on the FBNN — 94
4.1	Basic principles of FBNN — 94
4.1.1	Concept of FBNN — 94
4.1.2	Structure of FBNN — 94
4.1.3	Characteristics of FBNN — 94
4.2	Blind equalization algorithm based on the bilinear recurrent NN — 95
4.2.1	Basic principles of algorithm — 95
4.2.2	Real blind equalization algorithm based on BLRNN — 96
4.2.3	Complex blind equalization algorithm based on BLRNN — 99
4.3	Blind equalization algorithm based on the diagonal recurrent NN — 103
4.3.1	Model of diagonal recurrent NN — 103
4.3.2	Derivation of algorithm — 105
4.3.3	Computer simulation results — 106
4.4	Blind equalization algorithm based on the quasi-DRNN — 107
4.4.1	Model of quasi-DRNN — 107
4.4.2	Derivation of algorithm — 110
4.4.3	Computer simulation results — 112
4.5	Blind equalization algorithm based on the variable step-size DRNN — 115
4.5.1	Basic principles of algorithm — 115
4.5.2	Derivation of algorithm — 115
4.5.3	Computer simulation results — 116
4.6	Blind equalization algorithm based on the variable step-size QDRNN — 119
4.6.1	Basic principles of algorithm — 119
4.6.2	Derivation of algorithm — 119
4.6.3	Computer simulation results — 120
4.7	Summary — 123
5	Research of Blind Equalization Algorithms Based on FNN — 124
5.1	Basic principles of FNN — 124
5.1.1	Concept of FNN — 124
5.1.2	Structure of FNN — 125
5.1.3	The choice of fuzzy membership function — 126
5.1.4	Learning algorithm of FNN — 128
5.1.5	Characteristics of FNN — 128
5.2	Blind equalization algorithm based on the FNN filter — 129
5.2.1	Basic principles of algorithm — 129
5.2.2	Derivation of algorithm — 129
5.2.3	Computer simulation results — 133
5.3	Blind equalization algorithm based on the FNN controller — 134
5.3.1	Basic principles of the algorithm — 134

5.3.2	Derivation of algorithm —	135
5.3.3	Computer simulation results —	139
5.4	Blind equalization algorithm based on the FNN classifier —	141
5.4.1	Basic principles of algorithm —	141
5.4.2	Derivation of algorithm —	141
5.4.3	Computer simulation results —	146
5.5	Summary —	147
6	Blind Equalization Algorithm Based on Evolutionary Neural Network —	149
6.1	Basic principles of evolutionary neural networks —	149
6.1.1	The concept of GA —	149
6.1.2	Development of GA —	150
6.1.3	GA parameters —	151
6.1.4	The basic process of GA —	157
6.1.5	Characteristics of GA —	158
6.1.6	The integration mechanism of GA and neural network —	158
6.2	Blind equalization algorithm based on neural network weights optimized by GA —	159
6.2.1	The basic algorithm principle —	159
6.2.2	Feed-forward neural network weights optimized by GA blind equalization algorithm (GA-FFNNW) in binary encoding —	160
6.2.3	Real encoding GA-FFNNW blind equalization algorithm —	167
6.3	GA optimization neural network structure blind equalization algorithm (GA-FFNNS) —	172
6.3.1	The basic algorithm principle —	172
6.3.2	Algorithm derivation —	173
6.3.3	Computer simulation —	175
6.4	Summary —	179
7	Blind equalization Algorithm Based on Wavelet Neural Network —	180
7.1	Basic principle of wavelet neural network —	180
7.1.1	The concept of wavelet neural network —	180
7.1.2	The structure of wavelet neural network —	181
7.1.3	The characteristics of wavelet neural network —	182
7.2	Blind equalization algorithm based on feed-forward wavelet neural network —	182
7.2.1	Algorithm principle —	182
7.2.2	Blind equalization algorithm based on feed-forward wavelet neural network in real number system —	183
7.2.3	Blind equalization algorithm based on FFWNN in complex number system —	187
7.3	Blind equalization algorithm based on recurrent wavelet neural network —	194

7.3.1	Principle of algorithm —	194
7.3.2	Blind equalization algorithm based on BLRWNN in real number system —	194
7.3.3	Blind equalization algorithm based on BLRWNN in complex system —	198
7.4	Summary —	204
8	Application of Neural Network Blind Equalization Algorithm in Medical Image Processing —	205
8.1	Concept of image blind equalization —	205
8.1.1	Imaging mechanism and degradation process of medical CT image —	205
8.1.2	The basic principle of medical CT images blind equalization —	207
8.1.3	Quantitative measurements —	208
8.2	Medical CT image neural network blind equalization algorithm based on Zigzag —	209
8.2.1	Basic principle of algorithm —	209
8.2.2	Iterative formula derivation —	211
8.2.3	Analysis of algorithm convergence performance —	213
8.2.4	Experimental simulation —	215
8.3	Medical CT image neural network blind equalization algorithm based on double zigzag encoding —	219
8.3.1	The basic principle of algorithm —	219
8.3.2	Formula derivation of iterative algorithm —	220
8.3.3	Experimental simulation —	224
8.4	Summary —	226

Appendix A: Derivation of the Hidden Layer Weight Iterative Formula in the Blind Equalization Algorithm Based on the Complex Three-Layer FFNN — 229

Appendix B: Iterative Formulas Derivation of Complex Blind Equalization Algorithm Based on BRNN — 231

Appendix C: Types of Fuzzy Membership Function — 235

Appendix D: Iterative Formula Derivation of Blind Equalization Algorithm Based on DRFNN — 239
