Contents

Preface — VII

Part I: Theory

Chapter 1 First-Order Differential Equations — 3
1.1 Preliminaries — 3
1.2 Classes of First-Order Differential Equations — 6
1.2.1 Differential Equations with Separable Variables — 6
1.2.2 Differential Equations of Homogeneous Type — 7
1.2.3 First-Order Linear Differential Equations — 8
1.2.4 Bernoulli Equations — 13
1.2.5 Riccati Equations — 14
1.3 Mathematical Modeling with First-Order Differential Equations — 15
1.3.1 Radioactive Decay — 15
1.3.2 Newton's Law of Heat Transfer — 16
1.3.3 Chemical Reactions — 17
1.3.4 Population Growth of a Single Species — 18
1.3.5 The Gompertz Equation — 20

Chapter 2 Linear Differential Systems — 22
2.1 Preliminaries — 22
2.2 Mathematical Modeling with Linear Differential Systems — 23
2.3 Matrix Notation for Systems — 26
2.4 Superposition Principle for Linear Systems — 27
2.5 Linear Differential Systems with Constant Coefficients — 28
2.5.1 The General Solution — 28
2.5.2 Structure of Solution Set for Homogeneous Linear Systems — 31
2.5.3 The Concept of Fundamental Matrix — 32
2.5.4 Method of Eigenvalues and Eigenvectors — 35
2.6 Method of Variation of Parameters — 40
2.7 Higher-Dimensional Linear Systems — 42
2.8 Use of the Jordan Canonical Form of a Matrix — 44
2.9 Dynamic Aspects of Differential Systems — 46
2.10 Preliminaries of Stability — 52

Chapter 3 Second-Order Differential Equations — 53
3.1 Newton's Second Law of Motion — 53
3.2 Reduction of Order — 54

Bibliografische Informationen

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

3.3 Equivalence to a First-Order System — 57
3.4 The Method of Elimination — 58
3.5 Linear Second-Order Differential Equations — 59
3.5.1 The Solution Set — 59
3.5.2 Homogeneous Linear Equations with Constant Coefficients — 59
3.5.3 Variation of Parameters Method — 61
3.5.4 The Method of Undetermined Coefficients — 62
3.5.5 Euler Equations — 64
3.6 Boundary Value Problems — 66
3.7 Higher-Order Linear Differential Equations — 69

Chapter 4 Nonlinear Differential Equations — 72
4.1 Mathematical Models Expressed by Nonlinear Systems — 72
4.1.1 The Lotka–Volterra Model — 72
4.1.2 The SIR Epidemic Model — 73
4.1.3 An Immunological Model — 74
4.1.4 A Model in Hematology — 75
4.2 Gronwall's Inequality — 75
4.3 Uniqueness of Solutions for the Cauchy Problem — 77
4.4 Continuous Dependence of Solutions on the Initial Values — 81
4.5 The Cauchy Problem for Systems — 83
4.6 The Cauchy Problem for Higher-Order Equations — 84
4.7 Periodic Solutions — 85
4.8 Picard's Method of Successive Approximations — 88
4.8.1 Picard's Iteration — 88
4.8.2 The Interval of Picard's Iteration — 91
4.8.3 Convergence of Picard's Iteration — 92
4.9 Existence of Solutions for the Cauchy Problem — 93

Chapter 5 Stability of Solutions — 97
5.1 The Notion of a Stable Solution — 97
5.2 Stability of Linear Systems — 99
5.3 Stability of Linear Systems with Constant Coefficients — 100
5.4 Stability of Solutions of Nonlinear Systems — 101
5.5 Method of Lyapunov Functions — 106
5.6 Globally Asymptotically Stable Systems — 111

Chapter 6 Differential Systems with Control Parameters — 113
6.1 Bifurcations — 113
6.2 Hopf Bifurcations — 115
6.3 Optimization of Differential Systems — 119
6.4 Dynamic Optimization of Differential Systems — 122

Part II: **Exercises**

Seminar 1 **Classes of First-Order Differential Equations — 127**
1.1 Solved Exercises — **127**
1.2 Proposed Exercises — **129**
1.3 Solutions — **130**
1.4 Project: Problems of Geometry that Lead to Differential Equations — **131**

Seminar 2 **Mathematical Modeling with Differential Equations — 133**
2.1 Solved Exercises — **133**
2.2 Proposed Exercises — **135**
2.3 Hints and Answers — **136**
2.4 Project: Influence of External Actions over the Evolution of Some Processes — **136**

Seminar 3 **Linear Differential Systems — 139**
3.1 Solved Exercises — **139**
3.2 Proposed Exercises — **143**
3.3 Hints and Solutions — **145**
3.4 Project: Mathematical Models Represented by Linear Differential Systems — **146**

Seminar 4 **Second-Order Differential Equations — 148**
4.1 Solved Exercises — **148**
4.2 Proposed Exercises — **150**
4.3 Solutions — **151**
4.4 Project: Boundary Value Problems for Second-Order Differential Equations — **152**

Seminar 5 **Gronwall's Inequality — 154**
5.1 Solved Exercises — **154**
5.2 Proposed Exercises — **157**
5.3 Hints and Solutions — **157**
5.4 Project: Integral and Differential Inequalities — **158**

Seminar 6 **Method of Successive Approximations — 163**
6.1 Solved Exercises — **163**
6.2 Proposed Exercises — **164**

6.3 Hints and Solutions — 165
6.4 Project: The Vectorial Method for the Treatment of Nonlinear Differential Systems — 165

Seminar 7 Stability of Solutions — 170
7.1 Solved Exercises — 170
7.2 Proposed Exercises — 172
7.3 Hints and Solutions — 173
7.4 Project: Stable and Unstable Invariant Manifolds — 173

Part III: Maple Code

Lab 1 Introduction to Maple — 179
1.1 Numerical Calculus — 179
1.2 Symbolic Calculus — 181

Lab 2 Differential Equations with Maple — 185
2.1 The DEtools Package — 185
2.2 Working Themes — 186

Lab 3 Linear Differential Systems — 188
3.1 The linalg Package — 188
3.2 Linear Differential Systems — 188
3.3 Working Themes — 190

Lab 4 Second-Order Differential Equations — 191
4.1 Spring-Mass Oscillator Equation with Maple — 191
4.2 Boundary Value Problems with Maple — 193
4.3 Working Themes — 193

Lab 5 Nonlinear Differential Systems — 195
5.1 The Lotka–Volterra System — 195
5.2 A Model from Hematology — 196
5.3 Working Themes — 197

Lab 6 Numerical Computation of Solutions — 198
6.1 Initial Value Problems — 198
6.2 Boundary Value Problems — 199
6.3 Working Themes — 202

Lab 7 **Writing Custom Maple Programs — 204**
7.1 Method of Successive Approximations — **204**
7.2 Euler's Method — **206**
7.3 The Shooting Method — **208**
7.4 Working Themes — **211**

Lab 8 **Differential Systems with Control Parameters — 212**
8.1 Bifurcations — **212**
8.2 Optimization with Maple — **213**
8.3 Working Themes — **215**

Bibliography — 217

Index — 219
