|----------|-------------------------------------------------------------------------------|
| <b>1</b> | <b>Introduction — 1</b>                                                       |
| 1.1      | The status of biomass energy — 1                                              |
| 1.1.1    | Global biomass energy consumption — 2                                         |
| 1.1.2    | China's biomass energy consumption — 5                                        |
| 1.2      | Biomass energy utilization technologies — 7                                   |
| 1.3      | Introduction to biomass development and utilization<br>outside China — 8      |
| 1.3.1    | USA — 9                                                                       |
| 1.3.2    | Brazil — 12                                                                   |
| 1.3.3    | Europe — 13                                                                   |
| 1.4      | Biomass energy development and utilization in China — 14                      |
| 1.4.1    | Biogas — 15                                                                   |
| 1.4.2    | Liquid fuel — 16                                                              |
| 1.4.3    | Biomass molding fuel — 18                                                     |
| 1.4.4    | The biomass power plant — 19                                                  |
| 1.5      | The status of biomass energy in China's sustainable energy<br>strategy — 21   |
| 1.6      | Developmental direction and countermeasures of China's biomass<br>energy — 24 |

Yishui Tian, Changzhu Li, Wen Wang, Changhua Shang, Liangbo Zhang,  
Zhongming Wang, and Peiwan Li

|          |                                                        |
|----------|--------------------------------------------------------|
| <b>2</b> | <b>Biomass energy resources and energy plants — 29</b> |
| 2.1      | Material basis of biomass energy — 29                  |
| 2.1.1    | Photosynthesis — 29                                    |
| 2.1.2    | Biomass feedstock — 30                                 |
| 2.1.3    | Characteristics of biomass resources — 30              |
| 2.1.4    | Chemical composition of biomass — 31                   |
| 2.1.5    | Calorific value of biomass fuel — 33                   |
| 2.2      | Existing biomass resources in China — 35               |
| 2.2.1    | Crop straws — 35                                       |
| 2.2.1.1  | Properties — 35                                        |
| 2.2.1.2  | Resources and their regional distribution — 36         |
| 2.2.1.3  | Main uses, amounts and proportions — 36                |
| 2.2.2    | Livestock and poultry manure — 37                      |
| 2.2.3    | Forestry residue — 39                                  |
| 2.2.4    | Starch resources — 40                                  |

|          |                                             |    |
|----------|---------------------------------------------|----|
| 2.2.5    | Carbohydrate resources —                    | 42 |
| 2.2.5.1  | Sugarcane —                                 | 42 |
| 2.2.5.2  | Beet —                                      | 43 |
| 2.2.5.3  | Molasses —                                  | 44 |
| 2.2.6    | Waste edible oils —                         | 44 |
| 2.2.7    | Urban domestic garbage —                    | 46 |
| 2.2.8    | Industrial organic wastewater —             | 46 |
| 2.3      | Energy plants —                             | 47 |
| 2.3.1    | Concept of energy plants —                  | 47 |
| 2.3.2    | Technology improvement for energy plants —  | 50 |
| 2.3.2.1  | Crossbreeding —                             | 51 |
| 2.3.2.2  | Mutation breeding —                         | 51 |
| 2.3.2.3  | Physical mutagenesis —                      | 51 |
| 2.3.2.4  | Chemical mutagenesis —                      | 54 |
| 2.3.2.5  | Plant cell engineering —                    | 55 |
| 2.3.2.6  | Genetic engineering —                       | 56 |
| 2.3.3    | Agricultural crops —                        | 57 |
| 2.3.3.1  | Sweet sorghum —                             | 57 |
| 2.3.3.2  | Sugarcane energy —                          | 57 |
| 2.3.3.3  | Castor oil plant —                          | 58 |
| 2.3.3.4  | Soybean with high oleic acid —              | 64 |
| 2.3.3.5  | High erucic acid rapeseed oil —             | 67 |
| 2.3.3.6  | Cassava —                                   | 70 |
| 2.3.3.7  | Sweet potato —                              | 71 |
| 2.3.3.8  | Jerusalem artichoke —                       | 73 |
| 2.3.4    | Woody oil plants —                          | 74 |
| 2.3.4.1  | <i>Jatropha curcas</i> —                    | 75 |
| 2.3.4.2  | <i>Swida wilsoniana</i> —                   | 75 |
| 2.3.4.3  | <i>Pistacia chinensis</i> Bunge —           | 77 |
| 2.3.4.4  | <i>Xanthoceras sorbifolia</i> Bunge —       | 77 |
| 2.3.4.5  | <i>Sapindus</i> —                           | 78 |
| 2.3.4.6  | Tung oil tree —                             | 78 |
| 2.3.4.7  | <i>Sapium sebiferum</i> (L.) Roxb. —        | 79 |
| 2.3.4.8  | <i>Elaeis guineensis</i> Jacq. —            | 79 |
| 2.3.4.9  | <i>Symplocos paniculata</i> (Thunb.) Miq. — | 79 |
| 2.3.4.10 | <i>Idesia polycarpa</i> Maxim —             | 80 |
| 2.3.5    | Hydrocarbon energy plants —                 | 80 |
| 2.3.5.1  | <i>Eucalyptus robusta</i> Smith —           | 81 |
| 2.3.5.2  | <i>Euphorbia tirucalli</i> L. —             | 82 |
| 2.3.5.3  | <i>Sindora glabra</i> —                     | 82 |
| 2.3.5.4  | <i>Simmondsia chinensis</i> —               | 82 |
| 2.3.5.5  | <i>Pinus massoniana</i> —                   | 82 |

- 2.3.5.6 Copaifera reticulate — 83
- 2.3.5.7 Euphorbia lathyris — 83
- 2.3.5.8 Oil-producing herbs — 83
- 2.3.6 Wood energy forests — 84
- 2.4 Oleaginous microalgae — 85
- 2.4.1 Strains of oleaginous microalgae — 87
- 2.4.2 Isolation and selection of microalgae — 87
- 2.4.3 Culture of microalgae — 89
- 2.4.4 Harvesting and oil extraction — 90
- 2.4.5 Comprehensive utilization of microalgae — 92
- 2.5 Biomass resources forecast — 92
- 2.5.1 Crop straw — 92
- 2.5.1.1 Consumer demand growth — 93
- 2.5.1.2 Decrease in arable area — 93
- 2.5.1.3 Water shortages — 94
- 2.5.1.4 Low profit for grain — 94
- 2.5.1.5 Tight global food supply-demand situation — 94
- 2.5.2 Forestry residues — 96
- 2.5.2.1 Felling, logging residues bucking lave — 96
- 2.5.2.2 Forestry processing residues — 97
- 2.5.3 Wood energy — 97
- 2.5.4 Nonfood energy crops — 97
- 2.5.5 Oil-bearing energy forest — 99
- 2.5.6 Waste edible oils and fats — 100
- 2.5.7 Industrial organic wastewater — 100
- 2.5.8 Livestock and poultry manure — 100

Jinsong Zhou, Xinshu Zhuang, Hanping Chen, Chunjiang Yu, Jie Xu, and Xuesong Tan

- 3 Biomass direct combustion technology — 101**
- 3.1 Principle of biomass combustion — 101
- 3.1.1 Biomass combustion process — 102
- 3.1.1.1 Characteristics of biomass fuels — 102
- 3.1.1.2 Typical combustion process — 103
- 3.1.1.3 Characteristics of pyrolysis — 105
- 3.1.1.4 Combustion characteristics of coke — 106
- 3.1.2 Characteristics of biomass combustion — 107
- 3.1.2.1 Effect of moisture — 107
- 3.1.2.2 Burnout of volatiles — 108
- 3.1.2.3 Ash-related issues — 110
- 3.1.2.4 Design calculation of the combustion process — 112
- 3.1.3 Pollutant emissions of biomass combustion — 114
- 3.1.3.1 Soot emissions — 114

|         |                                                                |     |
|---------|----------------------------------------------------------------|-----|
| 3.1.3.2 | Pollutants emissions in the gaseous phase —                    | 115 |
| 3.1.3.3 | Emissions of heavy metals —                                    | 117 |
| 3.2     | Biomass ovens for domestic use —                               | 117 |
| 3.2.1   | Cooking stoves —                                               | 118 |

## **5 Biomass briquette fuel technology — 223**

- 5.1 Concepts and principles of biomass briquette fuel — 223
  - 5.1.1 Concepts of biomass briquette fuel — 223
  - 5.1.2 History of biomass briquette fuel development — 225
  - 5.1.3 Properties of biomass briquette fuel — 227
    - 5.1.3.1 Relax density — 227
    - 5.1.3.2 Mechanical durability — 228
    - 5.1.3.3 Elemental analysis — 228
    - 5.1.3.4 Industrial analysis — 229
    - 5.1.3.5 Porosity — 229
  - 5.1.4 Principles of biomass compression briquetting — 230
    - 5.1.4.1 Effect of lignin bonding — 230
    - 5.1.4.2 Effect of particle bonding — 231
    - 5.1.4.3 Effect of water content — 231
    - 5.1.4.4 Effect of electric potential — 232
    - 5.1.4.5 Effect of “solid bridge” structure — 232
- 5.2 Biomass briquette fuel technology and equipment — 233
  - 5.2.1 Biomass briquette fuel preconditioning technology and equipment — 233
    - 5.2.1.1 Biomass pulverization technology and equipment — 233
    - 5.2.1.2 Biomass drying technology and equipment — 235
  - 5.2.2 Biomass pellet fuel briquetting technology and equipment — 237
    - 5.2.2.1 Structure of the ring die — 240
    - 5.2.2.2 Material, hole shape, and thermal treatment of the ring die — 243
    - 5.2.2.3 Pressure roller — 244
  - 5.2.3 Biomass block-shaped fuel briquetting technology and equipment — 245
    - 5.2.3.1 Ring die briquetting equipment — 246
    - 5.2.3.2 Flat die briquetting equipment — 251
  - 5.2.4 Briquetting technologies and equipment for biomass rodlike fuel — 257
    - 5.2.4.1 Briquetting technologies for biomass rod-like fuel — 257
    - 5.2.4.2 Piston press — 257
    - 5.2.4.3 Screw extrusion press — 258
  - 5.2.5 Industrial production system for biomass briquette fuel — 259
