1	The Research Process for Rogue Waves — 1
1.1	The Research Process for Rogue Wave Phenomenon — 1
1.2	Some Famous Experiments of Rogue Waves — 5
1.3	Research Method and Physical Mechanism of Rogue Waves — 9
1.3.1	Methodology of Rogue Waves — 9
1.3.2	Physical Mechanism of Rogue Waves — 10
1.4	Mechanisms of Rogue Waves — 12
1.4.1	Linear Mechanisms of Rogue Waves — 12
1.4.2	Nonlinear Mechanisms of Rogue Waves — 17
1.5	Rogue Wave Solutions for Nonlinear Partial Differential Equations — 21
1.6	Optical Rogue Waves — 26
1.7	Financial Rogue Waves — 28
1.8	Nonautonomous Rogue Wave Solutions — 28
2	Construction of Rogue Wave Solution by the Generalized Darboux Transformation — 30
2.1	The Classical Darboux Transformation — 30
2.2	Generalized Darboux Transformation for the Classical KdV Equation — 32
2.3	Darboux Transformation for N -Coupled Focusing NLS Equation — 35
2.4	Rogue Wave Solutions for the Two-Component NLS Equation — 37
2.4.1	Rogue Wave Solutions for the Two-Component NLS Equation — 37
2.4.2	Bright-Dark Breather and Rogue Wave Solutions — 41
2.5	Generalized Darboux Transformation for NLS Equation — 45
2.5.1	Generalized Darboux Transformation — 46
2.5.2	Higher-Order Rogue Waves in Determinant Forms — 50
2.5.3	Mathematical Characters of the Rogue Wave Solutions for Standard NLS Equations — 55
2.6	Generalized Darboux Transformation for DNLS Equation — 59
2.6.1	Darboux Transformation-I — 59
2.6.2	Darboux Transformation-II — 63
2.6.3	Reductions — 66
2.6.4	Generalized Darboux Transformations — 67
2.6.5	Generalized Darboux Transformation-II — 69
2.6.6	High-Order Solutions for DNLS Equation — 72
3	Construction of Rogue Wave Solution by Hirota Bilinear Method, Algebro-geometric Approach and Inverse Scattering Method — 81
3.1	Hirota Bilinear Method — 81
3.1.1	Rogue Wave Solution for the NLS Equation — 81
3.1.2	Rogue Wave Solution for the DS-I Equation — 98

3.2	Reduction from the KP Equation —	105
3.3	Algebro-geometric Reduction Approach —	109
3.3.1	Relationship Between Fredholm Determinant and θ -Function —	110
3.3.2	Wronskian Solutions —	112
3.3.3	Construction of Rogue Wave Solution —	116
3.4	Inverse Scattering Method and Rogue Wave Solution —	118
3.4.1	Direct Problem —	119
3.4.2	Scattering Matrix —	120
3.4.3	Involution Relation —	120
3.4.4	Jumps of the Eigenfunctions and Scattering Data Across the Branch Cut —	122
3.4.5	Time Evolution —	123
3.4.6	Inverse Problem —	124
3.4.7	Darboux Transformation and Rogue Wave Solutions —	127
4	The Rogue Wave Solution and Parameters	
	Managing in Nonautonomous Physical Model —	135
4.1	Introduction to the Rogue Wave Solution —	135
4.2	Space-Time Modulation Nonlinear Schrödinger Equation —	137
4.2.1	One-Dimensional Nonlinear Physical Model —	137
4.2.2	Symmetry Analysis-Similarity Transformation and Similarity Solution —	137
4.2.3	One Dimensional Self-Similarity Optical Rogue Wave Solution and Its Parameter Analysis —	139
4.3	(3+1)-Dimensional Space-Time Modulation Gross–Pitaevskii/NLS Equation —	144
4.3.1	Three-Dimensional Nonlinear Physical Model —	144
4.3.2	Symmetry Analysis-Similarity Transformation and Reduction System —	146
4.3.3	Similarity Variable, Constraint Condition and Velocity Field —	147
4.3.4	Three-Dimensional Self-Similar Rogue Wave Solutions and Its Parameters Regulation —	148
4.4	Generalized Inhomogeneous Higher-Order Nonlinear Schrödinger Equation with Modulating Coefficients —	152
4.4.1	Symmetry Reductions – Transformation and Hirota Equation —	154
4.4.2	Determining Similarity Variables and Controlled Coefficients —	156
4.4.3	Darboux Transformation for the Hirota Equation —	159
4.4.4	Optical Rogue Wave Solutions —	160

4.5	Two-Dimensional Binary Mixtures of Bose–Einstein–Condensates —	165
4.5.1	Two-Component Gross–Pitaevskii Equations —	165
4.5.2	Symmetry Reduction Analysis —	166
4.5.3	Determining Similarity Variables and Controlled Coefficients —	168
4.5.4	Types of Nonlinear Interaction —	170
4.5.5	Self-Similar Vector Rogue Wave Solution —	171
4.6	Two-Dimensional Nonlocal Nonlinear Schrödinger Equation —	176
4.6.1	Two-Dimensional Nonlocal Nonlinear Model —	176
4.6.2	Two-Dimensional Variable Separation Reduction —	177
4.6.3	Two-Dimensional Rogue Wave-Like Solution —	178
4.7	The Generalized Ablowitz–Ladik–Hirota Lattice with Variable Coefficients —	184
4.7.1	Discrete Nonlinear Physical Model —	184
4.7.2	Differential-Difference Similarity Reductions and Constraints —	186
4.7.3	Determining the Similarity Transformation and Coefficients —	187
4.7.4	Nonautonomous Discrete Rogue Wave Solutions and Interaction —	188
