

Contents

1	Elementary Newtonian Mechanics	1
1.1	Newton's Laws (1687) and Their Interpretation	2
1.2	Uniform Rectilinear Motion and Inertial Systems	5
1.3	Inertial Frames in Relative Motion	6
1.4	Momentum and Force	7
1.5	Typical Forces. A Remark About Units	8
1.6	Space, Time, and Forces	10
1.7	The Two-Body System with Internal Forces	11
1.7.1	Center-of-Mass and Relative Motion	11
1.7.2	Example: The Gravitational Force Between Two Celestial Bodies (Kepler's Problem)	12
1.7.3	Center-of-Mass and Relative Momentum in the Two-Body System	20
1.8	Systems of Finitely Many Particles	21
1.9	The Principle of Center-of-Mass Motion	22
1.10	The Principle of Angular-Momentum Conservation	22
1.11	The Principle of Energy Conservation	23
1.12	The Closed n -Particle System	24
1.13	Galilei Transformations	25
1.14	Space and Time with Galilei Invariance	29
1.15	Conservative Force Fields	31
1.16	One-Dimensional Motion of a Point Particle	33
1.17	Examples of Motion in One Dimension	36
1.17.1	The Harmonic Oscillator	36
1.17.2	The Planar Mathematical Pendulum	38
1.18	Phase Space for the n -Particle System (in $\mathbb{R}^3$)	39
1.19	Existence and Uniqueness of the Solutions of $\dot{\underline{x}} = \underline{F}(\underline{x}, t)$	41
1.20	Physical Consequences of the Existence and Uniqueness Theorem	42

1.21	Linear Systems	44
1.21.1	Linear, Homogeneous Systems	44
1.21.2	Linear, Inhomogeneous Systems	45
1.22	Integrating One-Dimensional Equations of Motion	46
1.23	Example: The Planar Pendulum for Arbitrary Deviations from the Vertical	47
1.24	Example: The Two-Body System with a Central Force	51
1.25	Rotating Reference Systems: Coriolis and Centrifugal Forces	58
1.26	Examples of Rotating Reference Systems	60
1.27	Scattering of Two Particles that Interact via a Central Force: Kinematics	68
1.28	Two-Particle Scattering with a Central Force: Dynamics	71
1.29	Example: Coulomb Scattering of Two Particles with Equal Mass and Charge	76
1.30	Mechanical Bodies of Finite Extension	80
1.31	Time Averages and the Virial Theorem	84
	Appendix: Practical Examples	86
2	The Principles of Canonical Mechanics	93
2.1	Constraints and Generalized Coordinates	93
2.1.1	Definition of Constraints	93
2.1.2	Generalized Coordinates	95
2.2	D'Alembert's Principle	96
2.2.1	Definition of Virtual Displacements	96
2.2.2	The Static Case	96
2.2.3	The Dynamical Case	97
2.3	Lagrange's Equations	99
2.4	Examples of the Use of Lagrange's Equations	100
2.5	A Digression on Variational Principles	102
2.6	Hamilton's Variational Principle (1834)	105
2.7	The Euler-Lagrange Equations	105
2.8	Further Examples of the Use of Lagrange's Equations	107
2.9	A Remark About Nonuniqueness of the Lagrangian Function	108
2.10	Gauge Transformations of the Lagrangian Function	109
2.11	Admissible Transformations of the Generalized Coordinates	110
2.12	The Hamiltonian Function and Its Relation to the Lagrangian Function L	112
2.13	The Legendre Transformation for the Case of One Variable	113
2.14	The Legendre Transformation for the Case of Several Variables	115
2.15	Canonical Systems	116

2.16	Examples of Canonical Systems	118
2.17	The Variational Principle Applied to the Hamiltonian Function.	119
2.18	Symmetries and Conservation Laws.	120
2.19	Noether's Theorem	121
2.20	The Generator for Infinitesimal Rotations About an Axis	124
2.21	More About the Rotation Group	126
2.22	Infinitesimal Rotations and Their Generators	128
2.23	Canonical Transformations	130
2.24	Examples of Canonical Transformations.	134
2.25	The Structure of the Canonical Equations.	136
2.26	Example: Linear Autonomous Systems in One Dimension	137
2.27	Canonical Transformations in Compact Notation	139
2.28	On the Symplectic Structure of Phase Space	141
2.29	Liouville's Theorem	144
	2.29.1 The Local Form	145
	2.29.2 The Global Form	146
2.30	Examples for the Use of Liouville's Theorem	147
2.31	Poisson Brackets.	151
2.32	Properties of Poisson Brackets.	154
2.33	Infinitesimal Canonical Transformations	156
2.34	Integrals of the Motion	157
2.35	The Hamilton–Jacobi Differential Equation	160
2.36	Examples for the Use of the Hamilton–Jacobi Equation	161
2.37	The Hamilton–Jacobi Equation and Integrable Systems	165
	2.37.1 Local Rectification of Hamiltonian Systems	166
	2.37.2 Integrable Systems	170
	2.37.3 Angle and Action Variables	175
2.38	Perturbing Quasiperiodic Hamiltonian Systems	176
2.39	Autonomous, Nondegenerate Hamiltonian Systems in the Neighborhood of Integrable Systems	179
2.40	Examples. The Averaging Principle	180
	2.40.1 The Anharmonic Oscillator	180
	2.40.2 Averaging of Perturbations	182
2.41	Generalized Theorem of Noether	185
	Appendix: Practical Examples	193
3	The Mechanics of Rigid Bodies	199
3.1	Definition of Rigid Body	199
3.2	Infinitesimal Displacement of a Rigid Body	202
3.3	Kinetic Energy and the Inertia Tensor	203
3.4	Properties of the Inertia Tensor	206
3.5	Steiner's Theorem.	210
3.6	Examples of the Use of Steiner's Theorem.	211

3.7	Angular Momentum of a Rigid Body	216
3.8	Force-Free Motion of Rigid Bodies	218
3.9	Another Parametrization of Rotations: The Euler Angles	221
3.10	Definition of Eulerian Angles	223
3.11	Equations of Motion of Rigid Bodies	224
3.12	Euler's Equations of Motion	227
3.13	Euler's Equations Applied to a Force-Free Top	230
3.14	The Motion of a Free Top and Geometric Constructions	235
3.15	The Rigid Body in the Framework of Canonical Mechanics	238
3.16	Example: The Symmetric Children's Top in a Gravitational Field	242
3.17	More About the Spinning Top	245
3.18	Spherical Top with Friction: The "Tippe Top"	246
	3.18.1 Conservation Law and Energy Considerations	247
	3.18.2 Equations of Motion and Solutions with Constant Energy	250
	Appendix: Practical Examples	254
4	Relativistic Mechanics	257
4.1	Failures of Nonrelativistic Mechanics	258
4.2	Constancy of the Speed of Light	261
4.3	The Lorentz Transformations	262
4.4	Analysis of Lorentz and Poincaré Transformations	268
	4.4.1 Rotations and Special Lorentz Tranformations ("Boosts")	271
	4.4.2 Interpretation of Special Lorentz Transformations	275
4.5	Decomposition of Lorentz Transformations into Their Components	276
	4.5.1 Proposition on Orthochronous, Proper Lorentz Transformations	276
	4.5.2 Corollary of the Decomposition Theorem and Some Consequences	278
4.6	Addition of Relativistic Velocities	281
4.7	Galilean and Lorentzian Space-Time Manifolds	284
4.8	Orbital Curves and Proper Time	288
4.9	Relativistic Dynamics	290
	4.9.1 Newton's Equation	290
	4.9.2 The Energy-Momentum Vector	291
	4.9.3 The Lorentz Force	295
4.10	Time Dilatation and Scale Contraction	297
4.11	More About the Motion of Free Particles	299
4.12	The Conformal Group	302

5	Geometric Aspects of Mechanics	305
5.1	Manifolds of Generalized Coordinates	306
5.2	Differentiable Manifolds	309
5.2.1	The Euclidean Space $\mathbb{R}^n$	309
5.2.2	Smooth or Differentiable Manifolds	311
5.2.3	Examples of Smooth Manifolds	313
5.3	Geometrical Objects on Manifolds	317
5.3.1	Functions and Curves on Manifolds	318
5.3.2	Tangent Vectors on a Smooth Manifold	321
5.3.3	The Tangent Bundle of a Manifold	322
5.3.4	Vector Fields on Smooth Manifolds	324
5.3.5	Exterior Forms	328
5.4	Calculus on Manifolds	330
5.4.1	Differentiable Mappings of Manifolds	331
5.4.2	Integral Curves of Vector Fields	333
5.4.3	Exterior Product of One-Forms	334
5.4.4	The Exterior Derivative	336
5.4.5	Exterior Derivative and Vectors in $\mathbb{R}^3$	338
5.5	Hamilton–Jacobi and Lagrangian Mechanics	341
5.5.1	Coordinate Manifold Q , Velocity Space TQ , and Phase Space T^*Q	341
5.5.2	The Canonical One-Form on Phase Space	345
5.5.3	The Canonical, Symplectic Two-Form on M	348
5.5.4	Symplectic Two-Form and Darboux’s Theorem	350
5.5.5	The Canonical Equations	353
5.5.6	The Poisson Bracket	357
5.5.7	Time-Dependent Hamiltonian Systems	360
5.6	Lagrangian Mechanics and Lagrange Equations	362
5.6.1	The Relation Between the Two Formulations of Mechanics	362
5.6.2	The Lagrangian Two-Form	364
5.6.3	Energy Function on TQ and Lagrangian Vector Field	365
5.6.4	Vector Fields on Velocity Space TQ and Lagrange Equations	367
5.6.5	The Legendre Transformation and the Correspondence of Lagrangian and Hamiltonian Functions	370
5.7	Riemannian Manifolds in Mechanics	372
5.7.1	Affine Connection and Parallel Transport	373
5.7.2	Parallel Vector Fields and Geodesics	376
5.7.3	Geodesics as Solutions of Euler–Lagrange Equations	377
5.7.4	Example: Force-Free Asymmetric Top	378

6	Stability and Chaos	381
6.1	Qualitative Dynamics	381
6.2	Vector Fields as Dynamical Systems	382
6.2.1	Some Definitions of Vector Fields and Their Integral Curves	384
6.2.2	Equilibrium Positions and Linearization of Vector Fields	386
6.2.3	Stability of Equilibrium Positions	390
6.2.4	Critical Points of Hamiltonian Vector Fields	393
6.2.5	Stability and Instability of the Free Top	396
6.3	Long-Term Behavior of Dynamical Flows and Dependence on External Parameters	398
6.3.1	Flows in Phase Space	399
6.3.2	More General Criteria for Stability	400
6.3.3	Attractors	403
6.3.4	The Poincaré Mapping	407
6.3.5	Bifurcations of Flows at Critical Points	412
6.3.6	Bifurcations of Periodic Orbits	416
6.4	Deterministic Chaos	418
6.4.1	Iterative Mappings in One Dimension	418
6.4.2	Qualitative Definitions of Deterministic Chaos	420
6.4.3	An Example: The Logistic Equation	424
6.5	Quantitative Measures of Deterministic Chaos	429
6.5.1	Routes to Chaos	429
6.5.2	Liapunov Characteristic Exponents	433
6.5.3	Strange Attractors	436
6.6	Chaotic Motions in Celestial Mechanics	437
6.6.1	Rotational Dynamics of Planetary Satellites	438
6.6.2	Orbital Dynamics of Asteroids with Chaotic Behavior	444
7	Continuous Systems	447
7.1	Discrete and Continuous Systems	447
7.2	Transition to the Continuous System	452
7.3	Hamilton's Variational Principle for Continuous Systems	453
7.4	Canonically Conjugate Momentum and Hamiltonian Density	456
7.5	Example: The Pendulum Chain	457
7.6	Comments and Outlook	461
	Appendix A: Exercises	467
	Appendix B: Solution of Exercises	495

Appendix C: Appendix
