Abstract	vii
Kurzfassung	ix
Résumé	xi
List of Symbols	xix
1 Introduction	1
1.1 Outline and Contribution	3
1.2 Related Work	5
1.3 Acknowledgments	7
1.4 Notation	8
 I Linear State Space Models	 9
2 Generalities on Linear State Space Models	11
2.1 Solving the LSSM Equations	12
2.2 Statistical Assumptions	12
2.3 LSSM Inputs Fed to a LSSM	15
2.4 LSSM Forward and Backward in Time	16
2.4.1 LSSM Backward in Time	16
2.4.2 LSSM Forward/Backward in Time	16
 3 Autonomous Linear State Space Models	 17
3.1 Definitions and Outline	17
3.2 Algebraic Structure of the Set of LSSM Signals	18
3.3 Equivalent LSSM Signal Form	19

3.3.1	From a Signal Form to a LSSM Parameterization .	20
3.3.2	From a LSSM Parametrization to a Signal Form .	24
3.4	Uniqueness of LSSM Signal Form	25
3.5	Initial State Versus Observation Vector	27
3.6	A Change of Time-Scale	29
3.7	Fitting a LSSM Signal	30
3.8	Inner Product With LSSM Signals	34
4	Computations in Linear State Space Models	37
4.1	Gaussian Message Passing	38
4.1.1	Generality	38
4.1.2	Modified Bryson-Frazier Smoother	39
4.1.3	Improving Numerical Stability	41
4.1.4	Processing LSSM Models defined Forward and Backward in Time	43
4.2	From Messages to Expectations	44
4.3	Likelihood Computation	46
II	Detection and Estimation in Multi-Channel Signals With Autonomous Linear State Space Mod- els	47
5	Events in Multi-Channel Signals: Definition, Examples, and Problem Statement	49
6	Cost Definition, Computation, and Minimization	53
6.1	Exponentially-Weighted Squared Error Cost	53
6.1.1	Cost Definition	53
6.1.2	Recursive Computation of the Cost Function . . .	54
6.1.3	Cost Function Minimization	56
6.2	LSSM-Weighted Squared Error Cost	66
6.2.1	Cost Definition	66
6.2.2	Recursive Computation of the Cost Function . . .	67
6.2.3	Cost Function Minimization	70
6.2.4	Locality, Stability, and Steady-State	70
6.3	LSSM-Weighted Time-Dependent Polynomial Cost	72
6.3.1	Cost Definition	72
6.3.2	Recursive Computation of the Cost Function . . .	73
6.3.3	Cost Function Minimization	75

7	Event Detection in Various Conditions	77
7.1	Principles of Detection	77
7.1.1	Local Likelihood	77
7.1.2	Detection as Hypothesis Test	79
7.2	Detection in the Presence of Interferences	80
7.2.1	Additive Interference	80
7.2.2	Multiplicative Interference	82
7.3	Detection and Classification	84
7.3.1	Using Multiple Hypothesis Tests	84
7.3.2	Using a Classifier	84
7.4	Detection of Model Switches in Model-Dependent Noise .	85
7.4.1	Two-Sided Local Likelihood	85
7.4.2	Another Family of Hypothesis Tests	86
7.4.3	Detection of Model Switches	87
8	Example Applications	89
8.1	Robust ECG Shape Detection and Separation	90
8.1.1	LSSM for Measurement Signals	90
8.1.2	Detecting ECG Signal Shapes	92
8.2	Detecting and Estimating Straight-Line Movements of a Magnet From Magnetic Field Measurements	93
8.2.1	Physical Model of the Magnetic Field	94
8.2.2	LSSM for Magnetic Field Signals	96
8.2.3	Detecting and Estimating Movements of a Magnet	98
8.2.4	Results	101
8.3	Detecting and Estimating Electric Dipole Movements From Electrode Measurements	102
8.3.1	Physical Model of Voltage Measurements	103
8.3.2	LSSM for Measurement Signals	104
8.3.3	Detecting and Estimating Electric Dipole Move- ments	106
8.3.4	Results	108
8.4	Detection and Estimation of a Modulated Signal	110
8.5	Detection and Classification of Fires	112
8.5.1	Physical Model of the Optical Smoke Detector . .	112
8.5.2	LSSM for the Measured Signals	114
8.5.3	Detection and Classification of Fires and Nuisances	114
8.5.4	Results	116
8.6	Detection and Estimation of Model Switches	117
8.6.1	Piecewise Lines With Varying Noise Variance . . .	117

8.6.2 Piecewise Sinusoids With Varying Noise Variance .	118

III Learning Sparse Signal Decompositions in a State Space World 121

9 Why Should We Learn Sparse Signal Decompositions? 123

10 A State Space World for Sparse Signal Representations 125

10.1 Measurement and Signal Component Models	125
10.2 Joint LSSM of the Measurement Model	126
10.3 Capabilities of the Signal Component Model	128
10.3.1 Repetitions of a Single Signal Shape	129
10.3.2 Repetitions of Several Signal Shapes	129
10.3.3 Signal Shapes From a Given Class	130
10.3.4 Signal Shapes Generated From a System	131
10.3.5 Filtered White Gaussian Noise	131

11 Sparsity by Gaussian Scale Mixtures and Type-II Estimation 133

11.1 A Dictionary Learning Problem	133
11.2 Gaussian Scale Mixtures and Type-II Estimation	134
11.3 Regularization and Type-II Estimation	137
11.4 A Structured Covariance Estimation Problem	139
11.4.1 Characterization of Local Minima	140
11.4.2 Characterization of V_{tot}	142
11.4.3 Simultaneous Diagonalization	143

12 Learning Sparse Signal Decompositions 145

12.1 Maximum Likelihood Estimation	145
12.2 An EM Algorithm	147
12.2.1 Repetitions of (One or Several) Signal Shapes . . .	151
12.2.2 Signal Shapes From a Given Class or Generated From a System	152
12.2.3 Filtered White Gaussian Noise	154
12.3 Alternative EM Algorithms for Restrictive Cases	155
12.3.1 Using State Variables Only	155
12.3.2 Using an Alternative Input Variable	157
12.4 Marginal Likelihood Update	157
12.4.1 Mean/Variance Parameterization	158
12.4.2 Mean/Precision Parameterization	159

12.4.3	Dual Mean/Dual Precision Parameterization . . .	160
13	Relevant Applications of Learning Sparse Signal Decompositions	163
13.1	Learning Repetitive Signal Shapes	163
13.1.1	Problem Setup	164
13.1.2	Synthetic Example of Signal Separation and Learning	164
13.1.3	ECG Signal Separation and Learning	166
13.1.4	Fetal ECG Signal Separation and Learning	167
13.2	Learning Classes of Signal Shapes	170
13.2.1	Problem Setup	170
13.2.2	System Learning	171
13.2.3	Multi-Sinusoidal System	172
13.2.4	Model Switches	174
13.3	Sparse Signal Decomposition in a Signal Shape Domain	177
13.3.1	Problem Setup	177
13.3.2	Inferring Electric Dipole Movements From Multi-Channel Electrode Measurements	179
14	Hierarchical Modeling and Processing	191
14.1	Straightforward Hierarchical Processing	192
14.2	A Modeling Layer for the Inputs	192
14.3	A Modeling Layer for the Input Variances	193
14.3.1	General Model	193
14.3.2	Independent Model	193
14.3.3	Equality Constraints	194
14.3.4	Individual Input Constraints	195
15	Conclusion	197
	Appendices	201
A	Matrix Formulas	201
B	LSSM-Weighted Squared Error and Covariance Estimation	203
B.1	Isotropic Uncorrelated Noise	204
B.2	Uncorrelated Noise	205
B.3	Fully Correlated Noise	205

C	Cross-Covariance Computations in LSSM	207
C.1	Cross-Covariance Between X_{k-1} and X_k	207
C.2	Cross-Covariance Between X_{k-1} and U_k	209
C.3	Cross-Covariance Between X_k and U_k	210
D	General Quadratic Form Minimization	211
D.1	General Structured Matrix	211
D.2	Controllable Canonical Form	212
D.3	Observable Canonical Form	213
D.4	Jordan Canonical Form	213
D.5	Modified Jordan Canonical Form	215
E	Covariance Estimation With NUV Regularization	217
E.1	Independent and Identically Distributed Samples	217
E.2	The Single Sample Case	221
E.3	A Dictionary Learning Problem With Independent Samples	222
	Bibliography	225
	About the Author	235
