Contents

Preface *xvii*

Part I Resource Efficiency Metrics and Standardised Management Systems *1*

1 Energy and Resource Efficiency in the Process Industries *3*
Stefan Krämer and Sebastian Engell
1.1 Introduction *3*
1.2 Energy and Resources *4*
1.2.1 What Do We Mean by Energy and Resources? *4*
1.2.2 Classification of Energy and Resources *5*
1.3 Energy and Resource Efficiency *6*
1.4 Evaluation of Energy and Resource Efficiency *6*
1.5 Evaluation of Energy and Resource Efficiency in Real Time *8*
1.6 The Chemical and Process Industry *8*
1.6.1 Introduction *8*
1.6.2 The Structure of the EU Chemical Industry *9*
1.6.3 Energy and Raw Material Use of the Chemical Industry *9*
1.7 Recent and Potential Improvements in Energy and Resource Consumption of the Chemical and Process Industries *10*
1.8 What Can Be Done to Further Improve the Resource Efficiency of the Process Industry? *11*
1.8.1 Make a Plan, Set Targets and Validate the Achievements *11*
1.8.2 Measure and Improve Operations *12*
1.8.3 Improve the Process *14*
1.8.4 Integrate with Other Industrial Sectors and with the Regional Municipal Environment *15*
1.8.5 Don't Forget the People *15*
1.9 Conclusions *15*
References *16*

2 Standards, Regulations and Requirements Concerning Energy and Resource Efficiency *19*
Jan U. Lieback, Jochen Buser, David Kroll, Nico Behrendt, and Seán Oppermann
2.1 Introducing a Long-Term Development *19*
2.1.1 Historical Background and Reasoning *19*
2.1.2 Relation of CO_2 Emissions and Energy Efficiency *20*
2.1.3 EU Goals for Energy Efficiency *21*
2.1.4 Energy Efficiency Worldwide *22*
2.1.5 Growing EU Concern on Resource Efficiency *23*
2.2 Normative Approaches on Energy and Resource Efficiency *24*
2.2.1 Management Systems, Aim and Construction *24*
2.2.2 From Precursors towards the ISO 50001 *25*
2.2.3 Basics of ISO 50001 and Dissemination *26*
2.2.4 Energy Efficiency Developments in Germany *27*
2.2.5 ISO 50001 and ISO 50004 *28*
2.2.5.1 ISO 50001 *28*
2.2.5.2 ISO 50004 *28*
2.2.6 ISO 50003 and Companions ISO 50006 and 50015 *29*
2.2.7 EN 16247 and ISO 50002 *29*
2.2.8 New Standards *31*
2.2.9 Normative Approaches Regarding Resource Efficiency *32*
2.2.10 Perspectives *33*
2.3 Achievements of Energy and Resource Management *34*
2.3.1 Energy Baseline (EnB) and Energy Performance Indicators (EnPIs), Controlling Efficiency Improvement *34*
2.3.2 Developing EnPIs, Measuring and Verification of Energy Performance *34*
2.3.3 Hierarchy of Measures *36*
2.3.4 Energy and Resource Efficiency in the Context of Energy Management *36*
2.3.5 Examples of Measures *37*
2.4 Conclusion *38*
References *39*

3 Energy and Resource Efficiency Reporting *45*
Marjukka Kujanpää, Tiina Pajula, and Helena Wessman-Jääskeläinen
3.1 Executive Summary *45*
3.2 Introduction *45*
3.3 Obligatory Reporting Mechanisms *47*
3.3.1 EU Directive on Industrial Emissions (IED) *47*
3.3.2 EU Directive on Non-Financial Reporting *48*
3.4 Voluntary Reporting Mechanisms *49*
3.4.1 Eco-Management and Audit Scheme (EMAS) *49*
3.4.2 OECD Guidelines for Multinational Enterprises *49*
3.4.3 UN Global Compact *50*
3.4.4 Global Reporting Initiative (GRI) *51*
3.4.5 Integrated Reporting and the <IR> Framework *52*

3.4.6 GHG protocol *54*
3.4.7 ISO 14000 Series *54*
3.4.8 Environmental Labels *55*
3.4.9 Environmental Product Footprint and Organisational Footprint (PEF, OEF) *59*
3.5 Other Reporting Mechanisms *59*
3.5.1 Key Performance Indicators *59*
3.6 Summary of the Energy and Resource Efficiency Reporting Requirements *60*
References *61*

4 Energy Efficiency Audits *65*
Gunther Windecker
4.1 Introduction *65*
4.2 Stage 1: Current Energy Status *66*
4.3 Stage 2: Basic Analysis *67*
4.4 Stage 3: Detailed Analysis and Collection of Ideas *69*
4.5 Stage 4: Evaluation and Selection of Measures *72*
4.6 Stage 5: Realization and Monitoring *76*
4.7 Extension to Resource Efficiency *77*
4.8 Closing Remark *77*
References *78*

Part II Monitoring and Improvement of the Resource Efficiency through Improved Process Operations *79*

5 Real-Time Performance Indicators for Energy and Resource Efficiency in Continuous and Batch Processing *81*
Benedikt Beisheim, Marc Kalliski, Daniel Ackerschott, Sebastian Engell, and Stefan Krämer
5.1 Introduction *81*
5.2 Real-Time Resource Efficiency Indicators *82*
5.2.1 Resource Efficiency *82*
5.2.2 REI as (Key) Performance Indicators ((K)PI) *83*
5.2.3 Real-Time Resource Efficiency Monitoring *84*
5.2.4 Principles That Guide the Definition of Real-Time REI (Adapted from Ref. [10]) *84*
5.2.4.1 Gate-to-Gate Approach *85*
5.2.4.2 Based on Material and Energy Flow Analysis *85*
5.2.4.3 Resource and Output Specific to a Potential for Meaningful Aggregation *85*
5.2.4.4 Normalize to the Best Possible Operation *86*
5.2.4.5 Consider (Long-Term) Storage Effects *86*
5.2.4.6 Include Environmental Impact *86*
5.2.4.7 Hierarchy of Indicators – From the Whole Site to a Single Apparatus *87*

5.2.4.8 Focus on Technical Performance Independent of Economic Factors *87*
5.2.4.9 Extensible to Life-Cycle Analysis (LCA) *87*
5.2.5 Extension to LCA and Reporting *87*
5.2.6 Real-Time Resource Efficiency Indicators: Generic Indicators *88*
5.2.7 Definition of Baselines: Average and Best Cases *88*
5.3 Evaluation of the Suitability of Resource Efficiency Indicators *91*
5.3.1 Basic Procedure *91*
5.3.2 The MORE RACER Evaluation Framework *93*
5.3.3 Application of the RACER Framework *95*
5.4 Hierarchical Modelling of Continuous Production Complexes *96*
5.4.1 Introduction to the Plant Hierarchy *96*
5.4.2 Aggregation and Contribution Calculation *98*
5.4.2.1 General Performance Deviation *98*
5.4.2.2 Aggregation *98*
5.4.2.3 Performance Contribution of Lower Levels *99*
5.4.2.4 Load Contribution of Lower Levels *100*
5.4.2.5 Contribution of Other Factors *101*
5.4.2.6 Overall Result *102*
5.4.2.7 Illustrative Example *103*
5.4.3 Integration of Utility and Energy Provider *105*
5.4.4 Product-Oriented REI *106*
5.4.5 Simulated Example *107*
5.5 Batch Production *112*
5.5.1 Batch Resource Efficiency Indicators *113*
5.5.1.1 Energy Efficiency *114*
5.5.1.2 Material Efficiency *115*
5.5.1.3 Water and Waste Efficiency *116*
5.5.2 REI for Key Production Phases *116*
5.5.2.1 Reaction Efficiency *117*
5.5.2.2 Purification Efficiency *117*
5.5.3 REI for Plant-Wide Contributions to Resource Efficiency *118*
5.5.4 Rules for the Propagation and Aggregation of REI *119*
5.5.4.1 Recycled Materials *119*
5.5.5 Uniting and Splitting of Batches *119*
5.6 Integrated Batch and Continuous Production *122*
5.6.1 Transition from Batch to Continuous Production *122*
5.6.2 Transition from Continuous to Batch Production *124*
5.7 Conclusions *124*
Appendix: Decomposition of ΔBDP_L *125*
References *126*

6 Sensing Technology *129*
Alejandro Rosales and Oonagh Mc Nerney
6.1 Introduction *129*
6.2 Sensing: General Considerations and Challenges *131*
6.2.1 Precision *132*

6.2.2 Accuracy *132*
6.2.3 The Limitations of Any Measurement Method Due to the Inadequacy of the Theoretical Model for Matching the Real-World Conditions *134*
6.2.4 Sampling: The Nature of the Interaction Between the Bodies to be Measured and the Measurement Instrument is a Key Consideration for Inline Monitoring *135*
6.3 Energy Saving by Means of Accurate Metering *136*
6.4 Latest Advancements in Spectroscopy Technology for Process-Monitoring-Based Efficiency *137*
6.4.1 Introduction and State of the Art *137*
6.4.2 Hyperspectral Imaging *138*
6.4.3 Time-Gated Raman *139*
6.5 Process Analytical Technologies (PAT) *142*
6.6 Soft Sensors. Access to the "Truth" Distributed Among a Plurality of Simple Sensors *146*
6.7 MEMS-Based Sensors. Smart Sensors *147*
6.8 Future Trends in Sensing with Promising Impact on Reliable Process Monitoring *148*
6.8.1 Quantum Cascade Lasers (QCLs) *149*
6.8.2 Graphene-Based Sensors *150*
6.9 European R&D: Driving Forward Sensing Advancements *151*
6.10 Conclusion *152*
References *154*

7 Information Technology and Structuring of Information for Resource Efficiency Analysis and Real-Time Reporting *159*
Udo Enste
7.1 Introduction *159*
7.2 Information Technology in the Process Industries *159*
7.3 Resource Flow Modelling and Structuring of Information *163*
7.3.1 Resource Managed Units *163*
7.3.2 3-Tier Information Modelling Approach *164*
7.4 From Formulae to Runtime Software *167*
7.4.1 Recommended System Architecture – Building Context Awareness *167*
7.4.2 REI Application Design Process *168*
7.5 Industrial Installations *171*
7.5.1 Example 1: Batch-Continuous-Process *171*
7.5.2 Example 2: Integrated Chemical Production Complex *175*
7.6 Summary and Conclusions *178*
References *179*

8 Data Pre-treatment *181*
Cesar de Prada and Daniel Sarabia
8.1 Measurement Errors and Variable Estimation *182*
8.2 Data Reconciliation *188*

8.3 Gross Errors Detection and Removal *193*
8.3.1 Statistical Methods for Gross Errors Detection *195*
8.3.2 Robust M-Estimators *202*
8.4 Data Pre-treatment and Steady-State Detection *205*
8.5 Dynamic Data Reconciliation *208*
8.6 Conclusions *209*
References *210*

9 REI-Based Decision Support *211*
Marc Kalliski, Benedikt Beisheim, Daniel Ackerschott, Stefan Krämer, and Sebastian Engell
9.1 Introduction *211*
9.2 Visualization *213*
9.2.1 Principles of Human–Machine Interface Engineering *213*
9.2.2 REI Visualization Concepts *215*
9.2.2.1 Indicators Included in Plant Structure *215*
9.2.2.2 Sankey Diagrams *215*
9.2.2.3 Bullet Chart *216*
9.2.2.4 Stacked Bars and Stacked Area Plots *217*
9.2.2.5 Difference Charts and Sparklines *218*
9.2.2.6 Aggregated Tiles *220*
9.2.2.7 Selection of Visualization Elements for Efficient Concepts *220*
9.2.3 Process Monitoring *221*
9.2.3.1 Dashboard Concept for the Sugar Plant Case Study *223*
9.3 What-If Analysis *224*
9.3.1 Introduction *224*
9.3.2 Requirements *225*
9.3.2.1 Graphical Guidance *225*
9.3.2.2 Flexibility *225*
9.3.2.3 Analysis of Results *226*
9.3.2.4 Visual Feedback *226*
9.3.2.5 Scenario Database *226*
9.3.3 Exemplary Application *226*
9.4 Optimization *229*
9.4.1 Introduction *229*
9.4.2 Requirements *230*
9.4.2.1 Real-Time Performance *231*
9.4.2.2 Analysis of Optima *231*
9.4.2.3 Multicriterial Optimization *231*
9.4.3 Exemplary Application *232*
9.5 Conclusions *235*
References *236*

10 Advanced Process Control for Maximum Resource Efficiency *239*
André Kilian
10.1 Introduction *239*

10.2 The Importance of Constraint Control *239*
10.2.1 Operating Strategy for a Simple Depropanizer Column: Motivating Example *240*
10.2.2 Graphical Representation of Constraints *244*
10.2.3 Additive Nature of Constraint Give-Away *245*
10.2.4 The Need for Closed-Loop Optimization *246*
10.3 What is Advanced Process Control? *247*
10.3.1 The Control Pyramid *247*
10.3.2 Common Features of MPC Technologies *249*
10.4 Benefits and Requirements for Success *254*
10.4.1 Achieving Financial Benefits *254*
10.4.2 Justification and Benefit Estimation *256*
10.5 Requirements for success *258*
10.6 Conclusion *262*
References *263*

11 Real-Time Optimization (RTO) Systems *265*
Cesar de Prada and José L. Pitarch
11.1 Introduction *265*
11.2 RTO Systems *268*
11.3 Optimization Methods and Tools *274*
11.3.1 Non-Linear Programming *275*
11.3.1.1 KKT Optimality Conditions *276*
11.3.1.2 Sequential Quadratic Programming (SQP) *277*
11.3.1.3 Interior Point (IP) Methods *278*
11.3.2 Software and Practice *279*
11.3.3 Dynamic Optimization *280*
11.4 Application Example: RTO in a Multiple-Effect Evaporation Process *281*
11.4.1 Steady-State Modelling *283*
11.4.2 Experimental Customization *285*
11.4.2.1 Data Reconciliation *286*
11.4.2.2 Proposed Procedure *286*
11.4.3 Optimal Operation *289*
11.4.4 Some Experimental Results *290*
11.5 Conclusions *291*
References *291*

12 Demand Side Response (DSR) for Improving Resource Efficiency beyond Single Plants *293*
Iiro Harjunkoski, Lennart Merkert, and Jan Schlake
12.1 Executive Summary *293*
12.2 Introduction *293*
12.2.1 Trends *294*
12.2.2 Demand Side Response to Stabilize the Electricity Grid *295*
12.2.3 History of Demand Side Response *296*
12.3 Structure of this Chapter *297*

12.4 Motivation *297*
12.4.1 Demand for Flexibility and Alternatives to Demand Side Response *299*
12.4.1.1 Increase Flexibility via Additional Energy Storage Capacity *299*
12.4.1.2 Increase Flexibility via Additional Conventional Power Plants *299*
12.4.1.3 Increase Flexibility through Active Control of Renewable Energy Sources *299*
12.4.1.4 Increase Flexibility through an Increased Grid Capacity *300*
12.4.1.5 Increase Flexibility through Alternative Market Options *300*
12.4.2 Types of Demand Side Response Measures *300*
12.4.3 Market Drivers and Market Barriers *300*
12.5 Demand Side Response at Large Consumers *301*
12.5.1 Energy Efficiency (EE) *301*
12.5.1.1 Example: Use of More Energy-Efficient Pumps *301*
12.5.2 Load Management – Energy Demand Changes by Enhanced Planning Capability *304*
12.5.3 DSR Triggers *304*
12.5.3.1 Utility Trigger and Price Changes *305*
12.5.3.2 Energy Shortage *305*
12.5.3.3 Energy Portfolio Optimization *305*
12.5.4 Types of Demand Side Response *306*
12.5.4.1 Peak Shaving *309*
12.5.4.2 Load Shedding *309*
12.5.4.3 Load Shifting *309*
12.5.4.4 Ancillary Services *309*
12.6 Valorization *310*
12.6.1 Industrial Examples of Demand Side Response *311*
12.6.2 Example: Steel Production *312*
12.7 Summary and Outlook *313*
References *314*

13 Energy Efficiency Improvement using STRUCTese™ *317*
Guido Dünnebier, Matthias Böhm, Christian Drumm, Felix Hanisch, and Gerhard Then
13.1 Introduction *318*
13.1.1 STRUCTese™ Management System *321*
13.1.2 Energy Efficiency Check and Improvement Plan *323*
13.1.3 Energy Loss Cascade and Performance Indicators *327*
13.1.4 Online Monitoring and Daily Energy Protocol *336*
13.1.5 Implementation Results *338*
13.1.6 Open Issues and Research Topics *341*
References *343*

Part III Improving Resource Efficiency by Process Improvement *345*

14 Synthesis of Resource Optimal Chemical Processes *347*
Minbo Yang, Jian Gong, and Fengqi You
14.1 Introduction *347*
14.1.1 Background and Motivation *347*
14.1.2 Resource Optimal Chemical Processes *349*
14.2 Heuristic Methods *350*
14.2.1 Pinch Technology for Resource Network Integration *350*
14.2.2 Other Heuristic Methods for Process Synthesis *352*
14.3 Superstructure Optimization Based Method *353*
14.3.1 Superstructure Generation *353*
14.3.2 Data Extraction *355*
14.3.3 Mathematical Model Formulation *356*
14.3.3.1 Mass Balance Constraints *356*
14.3.3.2 Energy Balance Constraints *358*
14.3.3.3 Economic Evaluation Constraints *360*
14.3.3.4 Objective Function *361*
14.3.4 Solution Methods *362*
14.3.5 Applications of Synthesis of Resource Optimal Chemical Processes *363*
14.3.6 Hybrid Methods *364*
14.4 Other Impact Factors on Resource Optimal Chemical Processes *365*
14.4.1 Environmental Factors *365*
14.4.2 Social Factors *366*
14.4.3 Uncertainty *366*
14.5 Conclusion *366*
References *367*

15 Optimization-Based Synthesis of Resource-Efficient Utility Systems *373*
Björn Bahl, Maike Hennen, Matthias Lampe, Philip Voll, and André Bardow
15.1 Introduction *373*
15.2 Definition of Utility Systems *375*
15.3 Problem Statement *375*
15.4 Modelling *377*
15.4.1 Model Complexity *377*
15.4.1.1 Time Representation *378*
15.4.1.2 Part-Load Performance *379*
15.4.2 Decomposition *380*
15.4.3 Time-Series Aggregation *381*

15.5 Solution Methods for Optimal Synthesis of Utility Systems *382*
15.5.1 Superstructure-Based Optimal Synthesis of Utility Systems *383*
15.5.2 Superstructure-Free Optimal Synthesis of Utility Systems *385*
15.6 Analysis of Multiple Solutions for Decision Support *387*
15.6.1 Multi-objective Optimization *388*
15.6.2 Near-Optimal Solutions *388*
15.6.3 Optimization under Uncertainty *390*
15.7 Industrial Case Study *390*
15.7.1 Description of the Case Study *391*
15.7.2 Economically Optimal Solution *393*
15.7.3 Multi-objective Optimization *394*
15.7.4 Near-Optimal Solutions *395*
15.8 Conclusions for the Utility System Synthesis in Industrial Practice *397*
Acknowledgments *398*
References *398*

16 A Perspective on Process Integration *403*
Ivan Kantor, Nasibeh Pouransari, and François Maréchal
16.1 Overview *403*
16.2 Introduction *404*
16.3 Heat Integration *405*
16.3.1 Determining ΔT_{min} *406*
16.3.2 Composite and Grand Composite Curves *409*
16.3.3 Identifying Penalising Heat Exchangers *411*
16.3.4 Improving the Heat Recovery Targets *412*
16.3.5 Caste Study I: Application of Advanced Heat Integration Technologies *413*
16.4 Energy and Resource Integration *416*
16.4.1 Multi-Level Energy Requirement Definition *418*
16.4.2 Problem Formulation *419*
16.4.3 Heat Cascade *420*
16.4.4 Mass Integration *420*
16.4.5 Electricity *423*
16.4.6 Transportation *424*
16.4.7 Investment and Operating Costs *425*
16.4.8 Alternative Objectives *428*
16.4.9 Caste Study II: Site-Scale Integration and Multi-Level Energy Requirement Definition *430*
16.4.9.1 Single Process Integration (SPI) *430*
16.4.9.2 Total Site Integration (TSI) *432*
16.4.9.3 Heat Recovery Improvement Potentials *432*
16.4.9.4 Integration and Optimization of Energy Conversion Units *435*
16.5 Summary *437*
