

Table of content

Plenary talks	2
Talks	
Bio-Crystallography I: Hot new structures	4
Measurements and syntheses under extreme conditions	7
New crystal structures I	10
New developments in methods and instrumentation in neutron scattering	13
Bio-Crystallography II: Complementation by NMR and EPR	15
Crystallography in nanoscience	17
Structure-property-relationships	20
In-situ methods	23
Bio-Crystallography III: Enzymes	25
Electron microscopy	27
Experimental electron density	30
Bio-Crystallography IV: Crystallography in industry	32
New crystal structures II	34
Spectroscopic methods in crystallography	36
Structurally complex materials	38
Bio-Crystallography V: Instrumentation and methods	41
Developments in molecular crystallography	44
Characterization of defects in crystalline materials	47
Bio-Crystallography VI: Protein - nucleic acid complexes	49
New Crystal structures and properties	52
Powder diffraction / PDF	55
Lightning talks I	57
Lightning talks II	63
Poster	
Bio-Crystallography I: Hot new structures	71
Bio-Crystallography II: Complementation by NMR and EPR	72
Bio-Crystallography III: Enzymes	73
Bio-Crystallography IV: Crystallography in industry	75
Bio-Crystallography V: Instrumentation and methods	76
Bio-Crystallography VI: Protein – nucleic acid complexes	79
Measurements and syntheses under extreme conditions	80
New crystal structures	84
New developments in methods, instrumentation and applications in neutron scattering	101
Crystallography in nanoscience	102
Structure-property-relationships	105
In-situ methods	113
Electron microscopy	116
Experimental electron density	118
Spectroscopic methods in crystallography	121
Structurally complex materials	122
Developments in molecular crystallography	125
Characterization of defects in crystalline materials	126
Powder diffraction / PDF	130
Other topics	132
Author index	136
