

Contents to Volume 1

Preface *xiii*

- 1 **Introduction to Nanocomposites** 1
Xingru Yan and Zhanhu Guo

- 2 **Advanced Nanocomposite Electrodes for Lithium-Ion Batteries** 7
Jiurong Liu, Shimei Guo, Chenxi Hu, Hailong Lyu, Xingru Yan, and Zhanhu Guo

- 3 **Carbon Nanocomposites in Electrochemical Capacitor Applications** 33
Long Chen, Lili Wu, and Jiahua Zhu

- 4 **Application of Nanostructured Electrodes in Halide Perovskite Solar Cells and Electrochromic Devices** 67
Qinglong Jiang, Xiaoqiao Zeng, Le Ge, Xiangyi Luo, and Lilin He

- 5 **Perovskite Solar Cell** 91
Erkin Shabdan, Blake Hanford, Baurzhan Ilyassov, Kadyrzhan Dikhanbayev, and Nurxat Nuraje

- 6 **Nanocomposite Structures Related to Electrospun Nanofibers for Highly Efficient and Cost-Effective Dye-Sensitized Solar Cells** 113
Xiaojing Ma, Fan Zheng, Yong Zhao, Xiaoxu Wang, Zhengtao Zhu, and Hao Fong

- 7 **Colloidal Synthesis of Advanced Functional Nanostructured Composites and Alloys via Laser Ablation-Based Techniques** 135
Sheng Hu and Dibyendu Mukherjee

- 8 **Thermoelectric Nanocomposite for Energy Harvesting** 173
Ehsan Ghafari, Frederico Severgnini, Seyedali Ghahari, Yining Feng, Eu Jin Lee, Chaoyi Zhang, Xiaodong Jiang, and Na Lu

- 9 **Graphene Composite Catalysts for Electrochemical Energy Conversion** 203
Gang Wu and Ping Xu

- 10 **Electrochromic Materials and Devices: Fundamentals and Nanostructuring Approaches** 231
Dongyun Ma, Jinmin Wang, Huige Wei, and Zhanhu Guo

- 11 **Nanocomposite Photocatalysts for Solar Fuel Production from CO₂ and Water** 271
Huilei Zhao and Ying Li

Contents to Volume 2

Preface *xiii*

- 12 **The Applications of Nanocomposite Catalysts in Biofuel Production** 309
Xiaokun Yang, Kan Tang, Akkrum Nasr, and Hongfei Lin
 - 12.1 Introduction 309
 - 12.2 Bio-Gasoline 311
 - 12.2.1 Alcohols and Polyols 312
 - 12.2.2 Carbohydrates 312
 - 12.2.3 Lignocellulosic Biomass 316
 - 12.2.4 Lipids and Lactones 318
 - 12.2.5 Lactones 320
 - 12.3 Bio-Jet Fuels 320
 - 12.3.1 Bio-Jet Fuels from Carbohydrates 322
 - 12.3.1.1 Sugars 322
 - 12.3.1.2 Hemicellulose/Cellulose 322
 - 12.3.2 Lignin 326
 - 12.3.3 Bio-Jet Fuels from Lignocellulose-Derived Platform Chemicals 326
 - 12.3.3.1 Noble Metal on Porous Support 326
 - 12.3.3.2 Bimetallic Nanocatalysts 329
 - 12.3.4 Other Renewable Biomass Feedstock 332
 - 12.4 Renewable Diesel Fuel 333
 - 12.4.1 Hemicellulose/Cellulose 333
 - 12.4.2 Lignocellulose Derivative Platforms 336
 - 12.4.3 Plant Oils/Fatty Acids 337
 - 12.5 Conclusion 340
 - References 340

13	Photocatalytic Nanomaterials for the Energy and Environmental Application	353
	<i>Zuzeng Qin, Tongming Su, and Hongbing Ji</i>	
13.1	Introduction	353
13.2	Preparation of Photocatalytic Nanomaterials	354
13.2.1	Solid-State Method	355
13.2.2	Precipitation Method	355
13.2.3	Hydrothermal Method	355
13.2.4	Sol–Gel Method	356
13.2.5	Solvothermal Method	356
13.2.6	Other Preparation Methods	356
13.3	Application of Photocatalytic Nanomaterials in the Energy	357
13.3.1	Photocatalytic Conversion of Carbon Dioxide to Methanol	357
13.3.1.1	Different Kinds of Catalysts	358
13.3.1.2	Reaction Mechanism	364
13.3.2	Photocatalytic Conversion of Carbon Dioxide to Formate	365
13.3.2.1	Different Kinds of Catalysts	365
13.3.2.2	Reaction Mechanism	367
13.3.3	Photocatalytic Conversion of Carbon Dioxide to Methane	368
13.3.3.1	Different Kinds of Catalysts	368
13.3.3.2	Reaction Mechanism	370
13.3.4	Photocatalytic Conversion of Carbon Dioxide to Carbon Monoxide	373
13.3.4.1	Different Kinds of Catalysts	373
13.3.4.2	Reaction Mechanism	374
13.3.5	Photocatalytic Reactor for CO ₂ Reduction	376
13.4	Application of Photocatalytic Nanomaterials in the Environment	381
13.4.1	Photocatalysts for Degradation of Organic Pollutant	382
13.4.2	Reaction Mechanism	386
13.4.3	Photocatalytic Reactor for Photocatalytic Degradation of Organic Pollutant	387
13.5	Conclusion and Prospect	390
	Acknowledgments	391
	References	391
14	Role of Interfaces at Nano-Architected Photocatalysts for Hydrogen Production from Water Splitting	403
	<i>Rui Peng and Zili Wu</i>	
14.1	Introduction	403
14.2	Basic Principles of Hydrogen Generation from Photocatalytic Water Splitting	405
14.2.1	Main Processes of Photocatalytic Hydrogen Generation	405

14.2.2	Approaches for Enhancement of Photocatalytic Hydrogen Evolution Efficiency	408
14.2.2.1	Sacrificial Reagent	408
14.2.2.2	Cocatalyst	409
14.3	Photocatalytic Hydrogen Generation System Composing Functions of Interface at Nano-Architectures	410
14.3.1	Metal–Semiconductor Interfaces	410
14.3.1.1	Schottky Barrier	410
14.3.1.2	Surface Plasmon-Enhanced Photocatalytic Hydrogen Production	414
14.3.2	Semiconductor–Semiconductor Interfaces	420
14.3.2.1	Semiconductor p–n Junction System	420
14.3.2.2	Non- p–n Heterojunction Semiconductor System	423
14.4	Summary and Prospects	427
	Acknowledgments	428
	References	428
15	Nanostructured Catalyst for Small Molecule Conversion	439
	<i>Zhongyuan Huang, Jinbo Zhao, Haixiang Song, Yafei Kuang, and Zhe Wang</i>	
15.1	Supported 0D Structure	439
15.2	Unsupported 1D Nanostructures	445
15.3	Hierarchical Supportless Nanostructures	453
	References	463
16	Rational Heterostructure Design for Photoelectrochemical Water Splitting	467
	<i>Shaohua Shen, Meng Wang, and Xiangyan Chen</i>	
16.1	Introduction	467
16.1.1	Fundamentals	467
16.1.2	Efficiency Evaluation	469
16.1.3	Materials for Photoelectrochemical Water Splitting	470
16.2	TiO ₂ - and ZnO-Based Heterostructures	471
16.2.1	Quantum Dot (QD) Sensitization	471
16.2.2	Plasmonic Modification	474
16.2.3	Cocatalyst Decoration	479
16.2.4	Conductive Material Modification	482
16.3	α -Fe ₂ O ₃ -Based Heterostructures	483
16.3.1	Semiconductor Heterojunctions	485
16.3.2	Nanotextured Conductive Substrates	489
16.3.3	Surface Passivation	492
16.3.4	Cocatalyst Decoration	494
16.4	WO ₃ - and BiVO ₄ -Based Heterostructures	497
16.4.1	Coupling with Other Semiconductors	498
16.4.2	Coupling with Oxygen Evolution Catalysts	501
16.5	Cu ₂ O- and CuO-Based Heterostructures	504

16.5.1	Cu ₂ O and CuO Photocathodes	504
16.5.2	Heterostructure Design	504
16.6	Other Metal Oxide-Based Heterostructures	509
16.7	Summary and Perspectives	510
16.7.1	Mechanism Investigation	510
16.7.2	Construction of New Heterostructures	511
16.7.3	Tandem Cell for Overall PEC Water Splitting	511
	Acknowledgments	511
	References	512
17	Layered Double Hydroxide-Derived NO_x Storage and Reduction Catalysts for Vehicle NO_x Emission Control	527
	<i>Tianshan Xue, Wanlin Gao, Xueyi Mei, Yuhan Cui, and Qiang Wang</i>	
17.1	Introduction	527
17.1.1	Harm of Vehicle Exhausts	527
17.1.2	NO _x Treatment Technology for Vehicle Exhausts	527
17.1.3	Chemical Constituent and Structure of LDHs	529
17.2	Mechanism of NO _x Storage on LDH-Derived Catalysts	530
17.3	The Influence of LDH Chemical Composition on NSR	531
17.4	The Influence of Other Key Parameters	533
17.4.1	The Influence of Calcination Temperature	533
17.4.2	The Influence of Base Metal Loading	534
17.4.3	The Influence of Noble Metal Loading	535
17.5	Conclusions	537
	References	538
18	Applications of Nanomaterials in Nuclear Waste Management	543
	<i>Yawen Yuan, Hua Wang, Shifeng Hou, and Deying Xia</i>	
18.1	Introduction	543
18.2	Applications of Nanomaterials in Removal of Radionuclides from Radioactive Wastes	544
18.2.1	Graphene-Related Nanomaterials	545
18.2.2	Carbon Nanotubes (CNTs)	548
18.2.3	Magnetic Nanoparticles	549
18.2.4	Silver-Related Nanomaterials for I ⁻ Removal	551
18.2.5	Ion Exchange Nanomaterials	553
18.2.6	Mesoporous Silica	554
18.2.7	Other Nanomaterials	556
18.3	Conclusion and Perspectives	557
	References	560

19	Electromagnetic Interference Shielding Polymer Nanocomposites	567
	<i>Xingru Yan, Licheng Xiang, Qingliang He, Junwei Gu, Jing Dang, Jiang Guo, and Zhanhu Guo</i>	
19.1	Introduction	567
19.2	Criteria to Evaluate the Shielding Effectiveness	571
19.2.1	Conductive Shielding Materials with Negligible Magnetic Property	571
19.2.2	Conductive Shielding Materials with Magnetic Property	573
19.2.3	Theoretical Analysis	574
19.2.3.1	Magnetic Loss	574
19.2.3.2	Eddy Current Loss	574
19.2.3.3	Magnetic Hysteresis Loss	574
19.2.3.4	Residual Loss	574
19.3	Why EMI Shielding Polymer Nanocomposites?	575
19.3.1	Carbon-Based Nanofillers	575
19.3.2	Metal-Based Nanofillers	583
19.3.3	Conductive Polymer-Based Nanofillers	590
19.3.4	Other Nanofillers	593
19.4	Conclusion and Perspective	593

20	Mussel-Inspired Nanocomposites: Synthesis and Promising Applications in Environmental Fields	603
	<i>Lu Shao, Xiaobin Yang, Zhenxing Wang, and Libo Zhang</i>	
20.1	Introduction	603
20.2	Preparation, Structure, Mechanism, and Properties of Mussel-Inspired PDA	605
20.2.1	Polymerization Conditions and Process	605
20.2.2	Possible Structures and Adhesion Mechanisms	609
20.2.3	Surface Modification Methods Based on PDA	615
20.2.4	Other Physicochemical Properties of PDA	622
20.2.4.1	Good Acid Resistance and Poor Alkaline Resistance	622
20.2.4.2	Ultraviolet Resistance	623
20.2.4.3	Carbon Precursor	624
20.3	Mussel-Inspired Materials for Wastewater Treatment	626
20.3.1	Mussel-Inspired Special Wettable Materials for Oil/Water Separation	626
20.3.1.1	PDA-Based Nanoparticles	627
20.3.1.2	PDA-Based Textiles	628
20.3.1.3	PDA-Based Foams	628
20.3.1.4	PDA-Based Membranes	631
20.3.2	Mussel-Inspired Adsorbents for Removal of Heavy Metal, Organic Pollutants, and Bacterial from Water	633
20.3.2.1	Pure PDA Nanoparticles	633
20.3.2.2	Magnetic Core–Shell Nanoparticles	633
20.3.2.3	PDA Compound with Lamellar Structure	634

20.3.2.4	Mussel-Inspired Adsorbents Based on Other Inorganic Materials	637
20.3.2.5	PDA-Modified Porous Polymer Membrane	638
20.3.3	Mussel-Inspired Catalysts for Degradation of Organic Pollutants	640
20.4	Outlook	643
