Foreword I — v

Foreword II — vii

Preface — ix

1	Foundation of infrared-transparent materials — 1
1.1	Overview — 1
1.2	Infrared signal on the battlefield — 1
1.2.1	Electromagnetic spectrum and atmospheric window — 1
1.2.2	Blackbody radiation — 2
1.2.3	Infrared signal transmission through infrared-transparent materials — 6
1.3	Typical infrared-transparent substrate materials — 8
1.3.1	Classes of materials — 9
1.3.2	Single-crystal materials — 9
1.3.3	Polycrystalline materials and ceramics — 20
1.3.4	Optical glass — 28
1.4	Infrared antireflective and protective coatings — 32
1.4.1	Common optical thin-film materials and their main characteristics — 32
1.4.2	Surface superstructures — 34
1.4.3	Transparent conducting thin-films — 35
1.5	Optical properties of infrared antireflective and protective coatings — 37
1.5.1	Optical constants — 37
1.5.2	Transmittance — 39
1.5.3	Emittance — 41
1.5.4	Transmission wave range of common infrared materials — 43
1.6	Mechanical and thermal properties of infrared antireflective and protective coatings — 45
1.6.1	Hardness and elastic modulus — 45
1.6.2	Coating–substrate adhesion — 48
1.6.3	Thermal conductivity and thermal expansion coefficient — 49
2	Service environment of infrared antireflective and protective coatings — 55
2.1	Overview — 55
2.2	Aerodynamic heat/strength environment and aerodynamic heat/strength failures — 56

2.2.1	Basic forms of aerodynamic heat/strength failure of infrared windows — 56
2.2.2	The development of infrared window materials — 57
2.2.3	Design method for infrared window functional films — 61
2.2.4	Ground failure tests of infrared window — 67
2.2.5	Numerical simulation of failure of infrared window — 71
2.3	Analysis of typical aerodynamic heat/strength environment — 73
2.3.1	Calculation model of supersonic aircraft outer flow field — 74
2.3.2	Verification of supersonic aircraft outer flow-field model — 81
2.3.3	Calculation of blunted cone outer flow field — 83
2.3.4	Calculation of the pointed cone outer flow field — 86
2.4	Rain erosion — 91
2.4.1	Rain erosion and influential factors — 92
2.4.2	Test method and facilities of rain erosion — 95
2.4.3	Evaluation index of rain erosion resistance — 98
2.4.4	Protection from rain erosion — 99
2.5	Sand erosion — 100
2.5.1	Sand erosion damage behavior — 100
2.5.2	Factors influencing sand erosion — 101
2.5.3	Introduction of sand erosion test — 103
3	Optical design of infrared antireflective and protective coating system — 113
3.1	Overview — 113
3.2	Basic theories of coating design — 113
3.2.1	Mathematical method — 113
3.2.2	Monolayered uniform dielectric film — 117
3.2.3	Multilayered uniform dielectric film — 123
3.3	Oblique incidence theory and coating design — 126
3.3.1	Depolarization design of incident medium, coating and substrate combinations — 132
3.3.2	Quarter-wave stack depolarization design — 133
3.4	Discussion on the parametric variations of coating systems — 138
3.4.1	Influence of incident angle — 138
3.4.2	Influence of thin-film optical thickness — 140
3.4.3	Influence of thin-film refractive index — 145
3.4.4	Influence of thin-film physical thickness — 146
4	Preparation methods of infrared antireflective and protective coatings — 147
4.1	Overview — 147
4.2	Magnetron sputtering — 147

4.3	Thermal evaporation deposition —	150
4.3.1	Vacuum condition of the evaporation process —	151
4.3.2	Evaporation condition in the deposition process —	152
4.4	Plasma-enhanced chemical vapor deposition —	152
4.5	Filtered cathodic vacuum arc deposition —	154
4.6	Large-area filtered cathodic vacuum arc uniform deposition —	157
4.7	Large-size plane uniform magnetron sputtering —	158
4.8	Heavy-calibre spherical uniform magnetron sputtering —	164
5	Amorphous diamond films —	167
5.1	Overview —	167
5.2	Determination of deposition energy for rich sp^3 hybridization —	168
5.2.1	Mechanical properties of thin films —	169
5.2.2	Raman analysis —	170
5.2.3	X-ray photoelectron spectrum analysis —	174
5.2.4	Electron energy loss spectrum analysis —	178
5.3	Deposition mechanism of amorphous diamond films —	179
5.3.1	Cross-section layered density distribution of thin films —	180
5.3.2	Structural model of amorphous diamond films —	185
5.3.3	Surface morphology of thin films —	188
5.3.4	Surface composition of thin films —	191
5.4	Process control rules of optical parameters of thin films —	192
5.4.1	Basic theory —	192
5.4.2	Refractive index —	194
5.4.3	Extinction coefficient —	197
5.4.4	Optical band gap —	198
5.5	Effects of thin-film thickness and stress —	200
5.5.1	Mechanical properties of amorphous diamond thin films with different thickness —	200
5.5.2	Raman characterization of amorphous diamond films in different thicknesses —	202
5.5.3	Effect of thin-film stress —	204
5.6	Thermal stability —	206
5.6.1	Thermal stability of thin films in air —	207
5.6.2	Thermal stability of thin films in vacuum —	212
5.7	Adhesion with infrared window materials —	217
5.7.1	Interface properties of amorphous diamond thin films with zinc sulphide and magnesium fluoride —	218
5.7.2	Interface properties of amorphous diamond films with germanium —	220

5.8	Structure and stress analysis of multilayered amorphous diamond films — 225
5.8.1	Stress theory of multilayered films — 225
5.8.2	Microstructure of multilayered amorphous diamond films — 227
5.8.3	Stress analysis of multilayered amorphous diamond films — 231
5.9	Mechanical properties of multilayered amorphous diamond films — 233
5.9.1	Hardness and Young's modulus — 234
5.9.2	Fracture properties — 236
5.9.3	Scratch resistance and adhesion performance — 240
5.9.4	Effect of sublayer thickness on the mechanical properties of multilayered films — 244
6	Germanium-carbide film — 263
6.1	Overview — 263
6.2	Deposition rate of germanium-carbide film prepared by magnetron co-sputtering — 264
6.2.1	Preparation of germanium-carbide film by magnetron co-sputtering — 264
6.2.2	Effect of power on deposition rate — 265
6.2.3	Effect of substrate temperature on deposition rate — 266
6.3	Surface morphology, crystal structure and composition — 267
6.3.1	Surface morphology — 267
6.3.2	Crystal structure — 269
6.3.3	Composition analysis — 270
6.4	Bonding structure and bonding mechanism — 272
6.4.1	FTIR spectra of germanium-carbide thin films — 272
6.4.2	Raman spectra of germanium-carbide thin films — 275
6.4.3	X-ray photoelectron spectra of germanium-carbide films — 281
6.4.4	Bonding mechanism and rules — 285
6.5	Film density — 286
6.6	Optical properties of thin films — 290
6.6.1	Visible optical properties — 290
6.6.2	Infrared optical properties — 296
6.7	Electrical properties of thin films — 302
6.8	Mechanical properties of thin films — 305
6.8.1	Hardness and Young's modulus — 305
6.8.2	Residual stress — 307
6.9	Thermal stability — 313
6.9.1	Analysis of bonding structure — 313
6.9.2	Change of hardness — 316
6.10	Germanium-carbide composite films — 317

- 6.10.1 Germanium carbide/germanium-carbide composite films — **317**
- 6.10.2 Amorphous diamond films/germanium-carbide composite films — **320**

7 Boron phosphide thin films — 325

- 7.1 Overview — **325**
- 7.2 Research progress on the structure and properties of boron phosphide thin films — **326**
 - 7.2.1 Structural features of boron phosphide thin films — **326**
 - 7.2.2 Performance features of boron phosphide thin films — **329**
 - 7.2.3 Composite films — **331**
- 7.3 Structural analysis of boron phosphide thin films by reactive magnetron sputtering — **332**
 - 7.3.1 Process design of reactive magnetron sputtering — **332**
 - 7.3.2 Composition analysis — **333**
 - 7.3.3 Surface morphology — **335**
 - 7.3.4 Crystal structure and bonding states — **338**
 - 7.3.5 Growth mechanism — **344**
- 7.4 Thermal stability of boron phosphide thin films — **345**
 - 7.4.1 XRD analysis — **346**
 - 7.4.2 Raman analysis — **347**
- 7.5 Mechanical and optical properties of boron phosphide thin films — **349**
 - 7.5.1 Mechanical properties — **349**
 - 7.5.2 Optical properties — **353**
- 7.6 Corrosion resistance and wear resistance of boron phosphide thin films — **355**
 - 7.6.1 Corrosion resistance — **355**
 - 7.6.2 Wear resistance — **357**

8 Alumina thin films — 365

- 8.1 Overview — **365**
- 8.2 Research status of alumina thin films — **365**
 - 8.2.1 Basic properties — **365**
 - 8.2.2 Research status of crystalline alumina — **366**
- 8.3 Preparation methods of alumina thin films — **369**
 - 8.3.1 Deposition process of conventional magnetron sputtering — **369**
 - 8.3.2 Deposition process of resputtering assisted magnetron sputtering — **371**
- 8.4 Growth rate, composition, and chemical bonding — **373**
 - 8.4.1 Growth rate — **373**
 - 8.4.2 O/Al composition ratio — **374**
 - 8.4.3 Chemical bonding — **375**

8.5	Morphology and structure analysis — 376
8.5.1	Surface morphology — 376
8.5.2	Crystal structure — 377
8.6	Low-temperature crystallization by resputtering assisted deposition — 378
8.6.1	Crystal structure — 378
8.6.2	Mechanical properties — 380
8.6.3	Optical properties — 382
9	Yttrium oxide thin films — 387
9.1	Overview — 387
9.2	Crystal structure control of yttrium oxide thin films — 388
9.2.1	Effect of oxygen partial pressure — 389
9.2.2	Effect of substrate temperature — 391
9.2.3	Effect of substrate bias — 393
9.2.4	Effect of sputtering power — 395
9.3	Performance control of yttrium oxide film — 397
9.3.1	Optical properties of yttrium oxide thin films — 398
9.3.2	Mechanical properties of yttrium oxide thin films — 405
9.3.3	Surface wettability of yttrium oxide thin films — 409
9.4	Growth pattern and deposition rate — 417
9.4.1	Reactive hysteresis loop and growth pattern — 418
9.4.2	Control of reactive hysteresis loop — 420
9.4.3	Growth pattern and deposition rate — 422
9.5	Adhesion of yttrium oxide thin film and zinc-sulphide substrate — 423
9.5.1	XPS composition analysis of interface region — 424
9.5.2	Interfacial adhesive strength — 434
10	Infrared transparent conductive oxide thin film — 439
10.1	Overview — 439
10.2	Films prepared by plasma bombardment magnetron sputtering — 440
10.2.1	Microstructure of In_2O_3 and $\text{In}_2\text{O}_3\text{:Sn}$ films — 440
10.2.2	Composition and chemical bonding of In_2O_3 and $\text{In}_2\text{O}_3\text{:Sn}$ films — 448
10.2.3	Photoelectric performance of In_2O_3 and $\text{In}_2\text{O}_3\text{:Sn}$ films — 455
10.3	Structure and performance of $\text{Y}_2\text{O}_3\text{:Ru}$ — 461
10.3.1	Surface morphology of ruthenium-doped yttrium oxide film — 461
10.3.2	Crystal structure of ruthenium-doped yttrium oxide film — 462
10.3.3	Composition and chemical bonding of ruthenium-doped yttrium oxide film — 464
10.3.4	Electrical and optical properties of ruthenium-doped yttrium oxide film — 472

10.4	Mechanism analysis and application of infrared transparent conduction — 474
10.4.1	Mechanism analysis of infrared transparent conduction — 474
10.4.2	Zinc sulphide window far-infrared transparent conductive oxide thin film — 477
Index — 481
