### CHAPTER 3

#### Biology of the Osteoclast

|                                                                                                                                   |     |
|-----------------------------------------------------------------------------------------------------------------------------------|-----|
| R. BARON, M. CHAKRABORTY, D. CHATTERJEE, W. HORNE, A. LOMRI, and J.-H. RAVESLOOT. With 7 Figures .....                            | 111 |
| A. Introduction .....                                                                                                             | 111 |
| B. Main Morphological Features of the Osteoclast .....                                                                            | 112 |
| C. Structure-Function Relationship .....                                                                                          | 115 |
| D. Motility, Attachment, and Establishment of the Bone-Resorbing Compartment .....                                                | 116 |
| I. Cytoskeletal Organization .....                                                                                                | 116 |
| II. Attachment Apparatus .....                                                                                                    | 117 |
| 1. Clear Zone .....                                                                                                               | 117 |
| 2. Podosomes and the Sealing Zone .....                                                                                           | 118 |
| 3. Role of Integrins .....                                                                                                        | 119 |
| 4. Regulation of Bone Resorption and the Attachment Apparatus .....                                                               | 121 |
| E. Proteins Destined for Export: Biosynthetic and Secretory Functions of the Osteoclast .....                                     | 122 |
| I. Lysosomal Enzymes .....                                                                                                        | 122 |
| II. Nature and Specificity of the Secreted Enzymes .....                                                                          | 124 |
| III. Generation of Oxygen-Derived Free Radicals and Synthesis and Secretion of Other Proteins by the Osteoclast .....             | 127 |
| F. Cytosolic and Membrane Proteins: Membrane Composition and Ion Transport .....                                                  | 128 |
| I. Apical Membrane and the Process of Acidification .....                                                                         | 129 |
| II. Role of the Basolateral Membrane and Ion Channels in Acidification, Intracellular pH, and Membrane Potential Regulation ..... | 133 |
| III. Handling and Regulatory Role of Calcium .....                                                                                | 135 |
| G. Conclusion .....                                                                                                               | 137 |
| References .....                                                                                                                  | 140 |

## CHAPTER 4

**Osteoblasts: Differentiation and Function**

T.J. MARTIN, D.M. FINDLAY, J.K. HEATH, and K.W. NG.

|                                                                |     |
|----------------------------------------------------------------|-----|
| With 3 Figures .....                                           | 149 |
| A. Introduction .....                                          | 149 |
| B. Mature Members of the Osteoblast Lineage: Definitions ..... | 149 |
| C. Origin of Osteoblasts .....                                 | 151 |
| D. Osteoblast Lineage .....                                    | 153 |
| E. Protein Products of Osteoblasts .....                       | 155 |
| F. Factors That Influence Osteoblast Differentiation .....     | 156 |
| G. Model of Osteoblast Differentiation .....                   | 161 |
| H. Osteoblast Proliferation .....                              | 162 |
| I. Hormone Receptors and Responses of Osteoblasts .....        | 162 |
| J. Role of Osteoblasts in Intercellular Communication .....    | 165 |
| I. Osteoclast Activation .....                                 | 165 |
| II. Osteoclast Formation .....                                 | 166 |
| III. Coupling of Resorption to Formation .....                 | 168 |
| K. Proteinase Production by Osteoblasts .....                  | 170 |
| L. Conclusion .....                                            | 173 |
| References .....                                               | 173 |

## CHAPTER 5

**Cytokines of Bone**

|                                                                     |     |
|---------------------------------------------------------------------|-----|
| G.R. MUNDY. With 4 Figures .....                                    | 185 |
| A. Introduction .....                                               | 185 |
| B. Nature of the Osteotropic Cytokines .....                        | 185 |
| C. Cell Source of the Osteotropic Cytokines .....                   | 186 |
| D. Interactions Between Systemic Factors and Cytokines .....        | 186 |
| E. Interactions Between Cytokines .....                             | 187 |
| F. Diseases Associated with Abnormal Cytokine Production .....      | 187 |
| G. Interleukin-1 .....                                              | 188 |
| H. Interleukin-1 Receptor Antagonist .....                          | 194 |
| I. Tumor Necrosis Factor and Lymphotoxin .....                      | 195 |
| J. Interleukin-6 .....                                              | 197 |
| K. Gamma-Interferon .....                                           | 199 |
| L. $\beta_2$ -Microglobulin .....                                   | 199 |
| M. Osteoclastopoietic Factor .....                                  | 200 |
| N. Colony-Stimulating Factors .....                                 | 201 |
| O. Leukemia-Inhibitory Factor (Differentiation-Inducing Factor) ... | 202 |
| P. Prostaglandins and Other Arachidonic Acid Metabolites .....      | 203 |
| Q. Transforming Growth Factor $\beta$ .....                         | 206 |
| R. Bone Morphogenetic Proteins .....                                | 206 |

|                                            |     |
|--------------------------------------------|-----|

## CHAPTER 6

### Hormonal Factors Which Regulate Bone Resorption

|                                                                                   |     |
|-----------------------------------------------------------------------------------|-----|
| G.R. MUNDY. With 5 Figures .....                                                  | 215 |
| A. Introduction .....                                                             | 215 |
| B. Parathyroid Hormone .....                                                      | 215 |
| I. Effects of PTH on Bone Resorption .....                                        | 215 |
| II. Effects of PTH on Bone Formation .....                                        | 221 |
| III. Signal Transduction Mechanisms for PTH in Bone Cells ....                    | 221 |
| IV. Effects of PTH on Bone Turnover .....                                         | 222 |
| V. Effects of PTH on Calcium Homeostasis .....                                    | 224 |
| C. 1,25-Dihydroxyvitamin D .....                                                  | 225 |
| I. Vitamin D Receptor .....                                                       | 226 |
| II. Effects of 1,25-Dihydroxyvitamin D on Osteoclasts .....                       | 228 |
| III. Effects of Vitamin D Metabolites on Cells of<br>the Osteoblast Lineage ..... | 230 |
| D. Calcitonin .....                                                               | 230 |
| E. Amylin .....                                                                   | 233 |
| F. Cortisol .....                                                                 | 233 |
| G. Thyroid Hormones .....                                                         | 234 |
| H. Estrogens .....                                                                | 235 |
| References .....                                                                  | 238 |

## CHAPTER 7

### Factors That Regulate Bone Formation

|                                                                 |     |
|-----------------------------------------------------------------|-----|
| E. CANALIS, T.L. MCCARTHY, and M. CENTRELLA. With 1 Figure .... | 249 |
| A. Introduction .....                                           | 249 |
| B. Platelet-Derived Growth Factor .....                         | 251 |
| C. Heparin-Binding Growth Factors .....                         | 253 |
| D. Insulin-Like Growth Factors and Their Binding Proteins ..... | 255 |
| E. Transforming Growth Factor Beta .....                        | 257 |
| References .....                                                | 261 |

## CHAPTER 8

### Mineralization

|                                                     |     |
|-----------------------------------------------------|-----|
| H.C. ANDERSON and D.C. MORRIS. With 4 Figures ..... | 267 |
| A. Introduction .....                               | 267 |

|                                                                                      |     |
|--------------------------------------------------------------------------------------|-----|
| B. Direct Cellular Control of Mineralization Through Matrix Vesicles .....           | 267 |
| C. Mechanism of Matrix Vesicle Calcification .....                                   | 271 |
| I. Role of Alkaline Phosphatase .....                                                | 271 |
| II. Role of Lipids .....                                                             | 272 |
| III. Constitutive Proteins of Matrix Vesicles .....                                  | 273 |
| IV. Biphasic Hypothesis of Mineralization-Crystal Initiation Phase .....             | 274 |
| V. Biphasic Hypothesis of Mineralization-Crystal Growth Phase .....                  | 276 |
| D. Indirect Cellular Control of Mineralization .....                                 | 278 |
| I. Effect of Bone Morphogens on the Calcification Mechanism .....                    | 278 |
| II. Role of Growth Factors in Mineralization .....                                   | 279 |
| III. Hormones That Affect Calcification .....                                        | 279 |
| IV. Pathological Calcification .....                                                 | 280 |
| V. Vitamin D .....                                                                   | 281 |
| E. Cellular Regulation of the Composition and Mineralizing Potential of Matrix ..... | 281 |
| I. Collagen .....                                                                    | 281 |
| II. Proteoglycans and Noncollagenous Proteins of Matrix .....                        | 283 |
| III. Control of Angiogenesis .....                                                   | 284 |
| IV. Cellular Regulation of the Ionic Milieu at Calcification Sites .....             | 285 |
| V. Control of pH .....                                                               | 287 |
| References .....                                                                     | 288 |

## CHAPTER 9

### Pathogenesis of Osteoporosis

|                                                  |     |
|--------------------------------------------------|-----|
| L.G. RAISZ and K.C. SHOUKRI. With 1 Figure ..... | 299 |
| A. Introduction .....                            | 299 |
| B. Primary Osteoporosis .....                    | 299 |
| I. Calcium-Regulating Hormones .....             | 302 |
| 1. Parathyroid Hormone .....                     | 302 |
| 2. 1,25-Dihydroxyvitamin D .....                 | 303 |
| 3. Calcitonin .....                              | 303 |
| II. Systemic Hormones .....                      | 304 |
| 1. Sex Hormones .....                            | 304 |
| 2. Other Systemic Hormones .....                 | 305 |
| III. Local Factors .....                         | 306 |
| 1. Interleukins .....                            | 307 |
| 2. Prostaglandins .....                          | 307 |
| 3. Growth Factors .....                          | 308 |
| IV. Calcium and Other Nutrients .....            | 309 |
| V. Physical Activity and Life-style .....        | 310 |

|                                                             |     |
|-------------------------------------------------------------|-----|
| VI. Alternative Hypotheses .....                            | 311 |
| C. Secondary Osteoporosis .....                             | 311 |
| I. Glucocorticoid-Induced Osteoporosis .....                | 312 |
| II. Hyperparathyroidism .....                               | 316 |
| III. Hyperthyroidism .....                                  | 316 |
| IV. Hypogonadism .....                                      | 317 |
| V. Nutritional and Gastrointestinal Disorders .....         | 317 |
| VI. Renal Disease .....                                     | 318 |
| VII. Multiple Myeloma and Other Hematologic Disorders ..... | 319 |
| VIII. Mast Cells and Heparin .....                          | 320 |
| IX. Osteogenesis Imperfecta .....                           | 320 |
| X. Miscellaneous Therapeutic Agents .....                   | 321 |
| D. Conclusion .....                                         | 322 |
| References .....                                            | 323 |

## CHAPTER 10

### **Vitamin D Metabolism**

|                                                                                       |     |
|---------------------------------------------------------------------------------------|-----|
| J.A. EISMAN. With 4 Figures .....                                                     | 333 |
| A. Overview .....                                                                     | 333 |
| B. Dermal Production of Vitamin D <sub>3</sub> and Dietary Sources of Vitamin D ..... | 335 |
| I. Substrate and Chemistry .....                                                      | 335 |
| II. Ultraviolet Light and Skin Pigmentation .....                                     | 336 |
| III. Dietary Sources of Vitamin D .....                                               | 337 |
| C. Serum Vitamin D Binding Protein .....                                              | 338 |
| I. Ethnic Differences .....                                                           | 338 |
| II. Binding Affinities and Function .....                                             | 338 |
| D. Hepatic 25-Hydroxylation .....                                                     | 339 |
| I. Microsomal 25-Hydroxylase .....                                                    | 339 |
| II. Vitamin D Catabolism .....                                                        | 339 |
| III. 25-Hydroxyvitamin D Bioactivity .....                                            | 340 |
| E. Renal 1-Hydroxylation .....                                                        | 340 |
| I. Proximal Tubule Mitochondrial P450 .....                                           | 340 |
| II. Regulation of Renal 1-Hydroxylation .....                                         | 342 |
| III. Pathophysiology of Renal 1-Hydroxylation .....                                   | 343 |
| F. Extrarenal 1-Hydroxylation .....                                                   | 344 |
| I. Physiological Extrarenal 1-Hydroxylation .....                                     | 345 |
| II. Pathological Extrarenal 1-Hydroxylation .....                                     | 345 |
| G. Renal and Target Tissue 24-Hydroxylation .....                                     | 346 |
| I. Renal 24-Hydroxylation .....                                                       | 346 |
| II. Target Tissue 24-Hydroxylation .....                                              | 347 |
| III. Catabolic Versus Unique Functions of 24,25-Dihydroxyvitamin D .....              | 347 |

|                                                          |     |
|----------------------------------------------------------|-----|
| H. Vitamin D Catabolism .....                            | 348 |
| I. Target Tissues .....                                  | 349 |

| IV. Vitamin D Response Element in Responsive Genes ..... | 357 |
| K. Genomic and Nongenomic Effects .....                  | 358 |
| L. Summary .....                                         | 361 |
| References .....                                         | 362 |

## CHAPTER 11

### **Bisphosphonates: Mechanisms of Action and Clinical Use**

|                                                             |     |
|-------------------------------------------------------------|-----|
| H. FLEISCH .....                                            | 377 |
| A. Introduction .....                                       | 377 |
| B. Chemistry and General Characteristics .....              | 377 |
| C. Synthesis .....                                          | 379 |
| D. Methods of Determination .....                           | 379 |
| E. History of the Development for Use in Bone Disease ..... | 380 |
| F. Mode of Action .....                                     | 380 |
| I. Physicochemical Effects .....                            | 380 |
| II. Effect on Calcification In Vivo .....                   | 381 |
| III. Inhibition of Bone Resorption .....                    | 382 |
| 1. Assessment of Activity .....                             | 382 |
| 2. Activity of Various Bisphosphonates .....                | 384 |
| 3. Mechanisms of Action of Bone Resorption Inhibition ..... | 384 |
| 4. Other Effects In Vivo .....                              | 387 |
| G. Pharmacokinetics .....                                   | 387 |
| H. Animal Toxicology .....                                  | 389 |
| I. Drug Interactions .....                                  | 390 |
| J. Clinical Use .....                                       | 390 |
| I. Ectopic Calcification and Ossification .....             | 390 |
| 1. Soft Tissue Calcification .....                          | 390 |
| 2. Urolithiasis .....                                       | 391 |
| 3. Dental Calculus .....                                    | 391 |
| 4. Fibrodysplasia Ossificans Progressiva .....              | 391 |
| 5. Other Heterotopic Ossifications .....                    | 391 |
| II. Diseases with Increased Bone Resorption .....           | 392 |
| 1. Paget's Disease .....                                    | 392 |

|                                                                   |     |
|-------------------------------------------------------------------|-----|
| 2. Hypercalcemia of Malignancy and Tumoral Bone Destruction ..... | 394 |
| 3. Hyperparathyroidism and Other Causes of Hypercalcemia .....    | 396 |
| 4. Osteoporosis .....                                             | 397 |
| III. Other Indications .....                                      | 398 |

## CHAPTER 12

### **Paget's Disease**

|                                                                                                                             |     |
|-----------------------------------------------------------------------------------------------------------------------------|-----|
| D.C. ANDERSON. With 20 Figures .....                                                                                        | 419 |
| A. Introduction .....                                                                                                       | 419 |
| B. Nature of the Underlying Disease Process .....                                                                           | 419 |
| C. Epidemiology .....                                                                                                       | 420 |
| D. Direct Studies on the Etiology of Paget's Disease .....                                                                  | 423 |
| E. Possible Role of Canine Distemper Virus .....                                                                            | 423 |
| F. Properties of the Osteoclast That Might Make It Particularly Susceptible to Persistent Infection with an RNA Virus ..... | 425 |
| G. Clinical Features .....                                                                                                  | 427 |
| I. Bones Affected and Extent .....                                                                                          | 427 |
| II. Symptoms and Signs .....                                                                                                | 428 |
| 1. Features Due to Long-standing Excessive Bony Remodelling .....                                                           | 429 |
| 2. Features Due to Secondary Arthritis .....                                                                                | 430 |
| 3. Features Due to Pressure on Surrounding Structures .....                                                                 | 430 |
| 4. Neoplasia .....                                                                                                          | 431 |
| H. Histopathology .....                                                                                                     | 431 |
| I. Clinical Assessment and Investigation .....                                                                              | 431 |
| J. Treatment of Paget's Disease .....                                                                                       | 435 |
| I. Bisphosphonates (Diphosphonates) .....                                                                                   | 435 |
| II. Probable Mode of Action of Bisphosphonates in Paget's Disease .....                                                     | 439 |
| III. Future Work .....                                                                                                      | 439 |
| References .....                                                                                                            | 440 |

## CHAPTER 13

### **Hyperparathyroid and Hypoparathyroid Bone Disease**

|                                                            |     |
|------------------------------------------------------------|-----|
| M. PEACOCK. With 15 Figures .....                          | 443 |
| A. Introduction .....                                      | 443 |
| B. Parathyroid Hormone Function: Calcium Homeostasis ..... | 443 |

|                                                    |     |
|----------------------------------------------------|-----|
| C. Classification of Parathyroid Disease .....     | 444 |
| D. Primary Hyperparathyroidism .....               | 446 |
| I. Incidence .....                                 | 446 |
| II. Diagnosis .....                                | 446 |
| III. Pathogenesis .....                            | 449 |
| IV. Nonskeletal Signs .....                        | 450 |
| V. Skeletal Signs .....                            | 450 |
| 1. Radiology .....                                 | 452 |
| 2. Histology .....                                 | 455 |
| 3. Bone Mass and Fracture .....                    | 455 |
| VI. Human Parathyroid Hormone .....                | 456 |
| E. Secondary Hyperparathyroidism .....             | 457 |
| I. Renal Failure .....                             | 457 |
| 1. Diagnosis .....                                 | 457 |
| 2. Pathogenesis .....                              | 458 |
| 3. Skeletal Signs .....                            | 459 |
| II. Vitamin D Deficient Osteomalacia/Rickets ..... | 460 |
| 1. Pathogenesis and Diagnosis .....                | 460 |
| 2. Skeletal Signs .....                            | 462 |
| III. Ageing .....                                  | 463 |
| 1. Diagnosis and Pathogenesis .....                | 463 |
| IV. Others .....                                   | 467 |
| F. Tertiary Hyperparathyroidism .....              | 467 |
| G. Hypoparathyroidism .....                        | 468 |
| I. Diagnosis and Pathogenesis .....                | 468 |
| 1. Nonskeletal Signs .....                         | 469 |
| 2. Skeletal Signs .....                            | 469 |
| References .....                                   | 471 |

## CHAPTER 14

### **Skeletal Responses to Physical Loading**

|                                                 |     |
|-------------------------------------------------|-----|
| L.E. LANYON. With 4 Figures .....               | 485 |
| A. Introduction .....                           | 485 |
| B. Influences on Bone Form .....                | 485 |
| C. Hierarchy of Functional Control .....        | 487 |
| D. Nature of the Loading-Related Stimulus ..... | 490 |
| E. Experimental Studies: In Vivo .....          | 490 |
| F. Experimental Studies: In Vitro .....         | 494 |
| G. Loading of Bone Cell Cultures .....          | 496 |
| H. Implications of Experiments In Vivo .....    | 496 |
| I. Implications of Experiments In Vitro .....   | 497 |
| I. Organ Culture .....                          | 497 |
| J. Discussion .....                             | 499 |
| K. Summary .....                                | 502 |
| References .....                                | 503 |

## CHAPTER 15

**Parathyroid Hormone: Biosynthesis, Secretion, Chemistry, and Action**

|                                                                                                                                    |     |
|------------------------------------------------------------------------------------------------------------------------------------|-----|
| H.M. KRONENBERG, F.R. BRINGHURST, S. NUSSBAUM, H. JÜPPNER,<br>A.-B. ABOU-SAMRA, G. SEGRE, and J.T. POTTS, JR. With 5 Figures . . . | 507 |
| A. Physiologic Actions . . . . .                                                                                                   | 508 |
| I. Actions in Bone . . . . .                                                                                                       | 508 |
| 1. Effects upon Osteoclasts . . . . .                                                                                              | 509 |
| 2. Effects upon Osteoblasts . . . . .                                                                                              | 510 |
| II. Actions in Kidney . . . . .                                                                                                    | 512 |
| 1. Calcium Reabsorption . . . . .                                                                                                  | 513 |
| 2. Phosphate Reabsorption . . . . .                                                                                                | 514 |
| 3. Other Renal Effects . . . . .                                                                                                   | 516 |
| B. Biosynthesis and Secretion of PTH . . . . .                                                                                     | 517 |
| I. Parathyroid Hormone Biosynthesis . . . . .                                                                                      | 517 |
| II. Parathyroid Hormone Gene . . . . .                                                                                             | 520 |
| III. Parathyroid Hormone Secretion . . . . .                                                                                       | 522 |
| 1. Physiology . . . . .                                                                                                            | 522 |
| 2. Cellular Mechanisms . . . . .                                                                                                   | 523 |
| C. Structural Basis of PTH Function . . . . .                                                                                      | 525 |
| I. Parathyroid Hormone Binding and Activation Domains . . . . .                                                                    | 526 |
| II. Evolutionary Lessons: Rat and Chicken PTH . . . . .                                                                            | 529 |
| III. Three-Dimensional Structure of PTH . . . . .                                                                                  | 530 |
| IV. Lessons from the Structure and Activity of PTHrP . . . . .                                                                     | 532 |
| V. Structure-Activity Relationships for Middle and<br>Carboxyl Regions of PTH . . . . .                                            | 534 |
| D. Parathyroid Hormone Receptors . . . . .                                                                                         | 535 |
| E. Second Messengers in PTH Action . . . . .                                                                                       | 540 |
| I. Cyclic AMP . . . . .                                                                                                            | 540 |
| II. Other Second Messengers . . . . .                                                                                              | 541 |
| III. Physiologic Roles of Different Second Messengers in<br>PTH Action . . . . .                                                   | 543 |
| IV. Second Messengers in PTH Regulation of<br>Renal Phosphate Transport . . . . .                                                  | 544 |
| V. Modulation of PTH Signal Transduction . . . . .                                                                                 | 546 |
| F. Conclusion . . . . .                                                                                                            | 549 |
| References . . . . .                                                                                                               | 549 |

## CHAPTER 16

**Calcitonin Gene Products: Molecular Biology, Chemistry, and Actions**

|                                                    |     |
|----------------------------------------------------|-----|
| W. BORN and J.A. FISCHER. With 3 Figures . . . . . | 569 |
| A. Introduction . . . . .                          | 569 |

| II. Paracrine Agent in Smooth Muscle Relaxation .....                   | 632 |
| III. Parathyroid Hormone Related Protein in Lactating Breast ..         | 632 |
| IV. Location in Epithelia .....                                         | 632 |
| V. Endocrine and Paracrine Roles .....                                  | 632 |
| References .....                                                        | 633 |

## CHAPTER 18

### **Pathophysiology of Skeletal Complications of Cancer**

|                                                                    |     |
|--------------------------------------------------------------------|-----|
| G.R. MUNDY and T.J. MARTIN. With 1 Figure .....                    | 641 |
| A. Introduction .....                                              | 641 |
| B. Frequency of the Skeleton as a Site for Malignant Disease ..... | 641 |
| C. Cancers Which Involve the Skeleton .....                        | 643 |
| D. Favored Skeletal Sites of Malignancy .....                      | 644 |
| E. Complications of the Metastatic Process .....                   | 644 |
| F. Pathophysiology of the Metastatic Process .....                 | 647 |
| I. Properties of Tumor Cells Which Favor Metastasis .....          | 648 |
| II. Tumor Cell Invasion at the Primary Site .....                  | 650 |
| 1. Adhesion .....                                                  | 651 |
| 2. Secretion of Enzymes .....                                      | 651 |
| 3. Cell Motility .....                                             | 652 |
| III. Tumor Cells in the Bloodstream .....                          | 652 |
| IV. Tumor Cell Arrest at the Metastatic Site .....                 | 653 |
| V. Growth Regulatory Factors at Metastatic Sites .....             | 653 |
| G. Potential Mechanisms for the Metastatic Process in Bone .....   | 654 |
| I. Chemotactic Factors .....                                       | 654 |
| II. Growth Regulatory Factors .....                                | 654 |
| III. Calcium .....                                                 | 655 |
| IV. Proteolytic Enzymes .....                                      | 655 |
| H. Factors Which May Be Involved in Osteolysis .....               | 656 |
| I. Parathyroid Hormone Related Protein .....                       | 656 |
| II. Transforming Growth Factor $\alpha$ .....                      | 656 |
| III. Transforming Growth Factor $\beta$ .....                      | 657 |
| IV. Prostaglandins of the E Series .....                           | 658 |
| V. Parathyroid Hormone .....                                       | 659 |
| VI. Vitamin D Sterols .....                                        | 659 |
| VII. Platelet-Derived Growth Factor .....                          | 660 |
| VIII. Procathepsin D .....                                         | 660 |
| IX. Bone-Resorbing Cytokines .....                                 | 661 |
| I. Factors Involved in Osteoblastic Effects .....                  | 662 |
| I. Transforming Growth Factor $\beta_2$ .....                      | 663 |

|                                           |     |
|-------------------------------------------|-----|
| II. Fibroblast Growth Factor .....        | 663 |
| III. Plasminogen Activator Sequence ..... | 663 |
| References .....                          | 663 |

## CHAPTER 19

### The Proteins of Bone

|                                                                  |     |
|------------------------------------------------------------------|-----|
| P.D. DELMAS and L. MALAVAL. With 7 Figures .....                 | 673 |
| A. Introduction .....                                            | 673 |
| B. Collagen .....                                                | 676 |
| I. Structure and Synthesis of Bone Collagen .....                | 677 |
| 1. Structure of Collagens .....                                  | 677 |
| 2. Type I Collagen Synthesis and Secretion .....                 | 677 |
| II. Disorders of Collagen Synthesis: Osteogenesis Imperfecta ... | 681 |
| III. Markers of Collagen Metabolism .....                        | 682 |
| 1. Markers of Type I Collagen Synthesis: Propeptides .....       | 682 |
| 2. Markers of Collagen Degradation .....                         | 683 |
| C. Gamma-carboxyglutamic Acid Containing Proteins of Bone .....  | 685 |
| I. Gamma-Carboxyglutamic Acid (GLA) .....                        | 685 |
| II. Osteocalcin .....                                            | 685 |
| 1. Structure, Biosynthesis, and Tissular Distribution .....      | 685 |
| 2. Functional Role .....                                         | 686 |
| 3. Circulating Osteocalcin .....                                 | 688 |
| III. Matrix GLA-Protein .....                                    | 689 |
| D. Proteoglycans .....                                           | 690 |
| I. Biglycan and Decorin .....                                    | 690 |
| 1. Structure .....                                               | 690 |
| 2. Distribution .....                                            | 692 |
| 3. Properties and Potential Role .....                           | 692 |
| II. CS-PGIII .....                                               | 693 |
| III. Other Proteoglycans .....                                   | 693 |
| E. SPARC/Osteonectin .....                                       | 694 |
| I. Structure .....                                               | 694 |
| II. Binding to Hydroxyapatite and to Other Proteins .....        | 696 |
| III. Tissular Distribution .....                                 | 697 |
| IV. Biological Properties and Potential Role .....               | 698 |
| V. Circulating SPARC/Osteonectin .....                           | 699 |
| F. Bone RGD-Containing Proteins .....                            | 699 |
| I. Bone Sialoproteins .....                                      | 700 |
| 1. Osteopontin .....                                             | 701 |
| 2. Bone Sialoprotein II .....                                    | 702 |
| II. Thrombospondin .....                                         | 704 |
| III. Fibronectin .....                                           | 706 |
| G. Other Proteins in Bone .....                                  | 707 |

|                                            |     |
|--------------------------------------------|-----|
| I. Proteases and Protease Inhibitors ..... | 707 |
| II. Plasma Proteins .....                  | 709 |
| H. Conclusion .....                        | 710 |
| References .....                           | 710 |

## CHAPTER 20

### **Bone Morphogenetic Proteins**

|                                                         |     |
|---------------------------------------------------------|-----|
| J.M. WOZNEY and V. ROSEN. With 4 Figures .....          | 725 |
| A. Introduction .....                                   | 725 |
| B. Biochemistry and Molecular Biology of the BMPs ..... | 726 |
| I. In Vivo Assay System .....                           | 726 |
| II. Discovery of Multiple Related Proteins .....        | 729 |
| 1. Purification from Bone .....                         | 729 |
| 2. Bone Morphogenetic Protein Family .....              | 729 |
| 3. Recombinant Expression .....                         | 733 |
| 4. Expression of BMPs in Other Tissues .....            | 734 |
| 5. Chromosomal Localization of the BMP Genes .....      | 735 |
| C. Activities of Individual BMP Molecules .....         | 736 |
| I. In Vivo Activities .....                             | 736 |
| II. In Vitro Activities .....                           | 737 |
| III. Bone Morphogenetic Proteins in Embryogenesis ..... | 739 |
| D. Clinical Utility of BMPs .....                       | 740 |
| I. Clinical Indications .....                           | 740 |
| II. Animal Studies .....                                | 741 |
| 1. Bone-Derived Extracts .....                          | 741 |
| 2. Recombinant Human BMPs .....                         | 742 |
| III. Human Studies with Bone Extracts .....             | 742 |
| E. Summary .....                                        | 743 |
| References .....                                        | 743 |
| <b>Subject Index</b> .....                              | 749 |
